>Jim, thank you. Another question, please. How do you know 10wpm is
>the lowest speed which can be considered proficient?

It's the lowest speed for which a proficiency award is available. So 10 wpm is the very beginning - the lowest recognized level - of Morse code proficiency. Of course much higher levels of proficiency are attainable, but that's another story.

Thus, a 13 wpm code test is a code proficiency test because 13 is greater than 10, but a 5 wpm code test is not a code proficiency test because 5 is less than 10.

So when someone says their goal is 'elimination of the Morse code proficiency test for any amateur radio license in the USA', it is accurate to reply that their goal has been accomplished.

They were not basing their conclusion on the transmission analogy.

> This is what the
>analogy says.

Nope.

> Now, you're backing out of it.
>
Not at all.

A few posts back in this thread, someone made a comparison with riding a horse. That's not a good analogy for a number of reasons. So I suggested a much more relevant analogy - manual transmission ("stick-shift") cars, and tests for same. That analogy did not originate with me - I got it from K2UNK.

I did not state my own opinion, just the analogy, and asked I some questions.

>Instead of the analogy, why don't you just state your position on Morse code
>testing?

I've stated my position many times before, but here goes: I think that Morse code tests for an amateur radio license are a good thing and should be retained. I commented to the FCC that the tests should be 5, 13 and 20 wpm for General, Advanced and Extra. I think the dropping of the code test from the Tech wasn't a good idea.

And I also realize that there is little chance my views will be acted on by the FCC. Chances are very good that FCC will drop the one remaining code test as soon as changes to the ITU-R treaty no longer REQUIRE code testing for all amateur radio licenses that allow operation below 30 MHz.

>
>>>Whether <Morse> code is useful is debatable.
>>
>>Of course Morse code is useful. Radio amateurs all over the world use it
>>every day.
>
>You say because Hams use it, that it is useful.

No, I say that because radio amateurs use it, it is useful.

>This is circular logic.

No, it's the definition of "useful". If something has a use, it is useful.

>Hams
>only use it because they WANT to use it, NOT because it may be useful.

That can be said of any mode.

>Just because it is in use does not make it useful.

Then what is your definition of "useful"?
>
>>>I feel <Morse> code is not useful
>>>and possibly harms to the hobby (and one's "state") more than there are
>>>benefits.
>>
>>Why?
>
>It harms the hobby because non-hams know enough about Ham radio to know that
>Morse code is used.

How does that cause any harm? The non-hams I have met are impressed and
intrigued that hams use Morse code and are often amazed at even my limited
skills with the mode. "You mean you can understand that?!" is a common comment.
"Just like listening to someone talk" is my usual reply.
>
>I mentioned I was a Ham to a bunch of non-Hams in a social situation. I was
>surprised what non-Hams have the impression of Hams. Someone asked the
>following questions:
>"Do they still use Morse code"?

I'd answer those questions like this:

"Many hams use Morse code, and many do not. Hams use several types of voice,
data, image and other communications modes. There are even amateur radio
communication satellites. Most hams use a variety of modes."

>(Then he mentioned that it is long obsolete
>and even the military does not use it anymore).

"It's not obsolete to the people who use it. Just like propeller airplanes,
sailboats, manual transmission cars, or many other things."

>"Are Hamfests like Star-Trek conventions"? (After I said I went to a
>Hamfest).

"No. Most of them are basically electronic and computer flea markets. All sorts
of stuff to be found, ranging from real junk to hard-to-find treasures."

>"Is that like a cult or something"?

"No. All sorts of people are amateur radio operators, and they have all sorts
of interests in radio."

>"Do Hams participate in social activities"?

"Some are social types, some aren't. There are conventions and such, but most
hams socialize with each other on the air".
>
>I was at a loss at answering each one of these questions.
>
That's why I suggest the above answers.

>If you want positive public opinion, get rid of this Morse obsession, or keep
>it to yourself. It only makes the hobby look bad.

Not an "obsession" on my part, Vipul, just an interest.

You have not shown how the use of Morse code by hams does anyone any harm.
>
>I also think its bad for you, if you don't enjoy it.

But I do enjoy it. YMMV

>If individuals enjoy it,
>it is fine with me - just don't make it represent the hobby.

See above. Just present a balanced, accurate picture - hams use a wide variety
of modes. Morse is one of them.
>
>>What is wrong with free choice of modes? How does the USE (not the test, the
>>USE) of Morse code by hams cause any problems?
>
>Nothing wrong with free choice of modes.

That's what we have. Nobody has to use any particular mode on the air.

>However, it is emphasized so much
>that other modes suffer.

Is it wrong to emphasize what someone likes to do? What modes do YOU operate?

I look in my ham radio mags, and there's article after article on digital
modes, satellites, VHF/UHF, image modes, APRS, AM, etc. Once in a great while
there's an article on Morse code.

> Also, don't tie Morse code requirement to the general test

You keep saying that, Vipul, but you don't tell us how to avoid doing that and
still comply with ITU-R.

Perhaps you mean we should go back to requiring a code test for all ham licenses, so there is no tying of any license class to the code test.

>- that is not free choice of modes.

Sure it is. Hams can use any authorized mode. The test requires certain knowledge and skills, that's all.

> Jim, thank you. Another question, please. How do you know 10wpm is
> the lowest speed which can be considered proficient?

I disagree with Jim on this one. The definition of "proficient" is
"skilled" or "expert". While 10 wpm may mark a journeyman level, I
don't consider it proficient. Many QSOs take place at the 20-35 wpm
level.

One thing I know is that there is no answer to your question which will
please you. You may delude yourself all you like. Someone whose top
morse speed is five wpm is not proficient in the use of morse.

Now I'm heading back to CNN's coverage of the war.

In article <3E7899CC.81F8D963@earthlink.net>, Dave Heil <k8mn@earthlink.net>
writes:

>Avery Fineman wrote:
>>

>We can go over the N2EY profile of Leonard Anderson again if you like.
>I think we can find numerous examples of your having made comments which
>show ignorance and in which you demonstrate that you are irrational,
>mean spirited, uncivil and arrogant.

The subject thread is "honest code elimination question."

It is not 'Dave Heil's opinions of someone who does not worship,
respect, or honor him."

>> This is not a newsgroup about psychology.
>
>Then why did you state credentials through your wife in an earlier post?

A much earlier post. That post was on credentials alone.

Why do you insist on making such a fuss over my wife?

Isn't it just another ploy in attempting character assassination?

>Your wife isn't a target of anything.

Yes, she is. Heil makes a despicable attempt at character
assassination by relationship.

>We have only your comments relating to her.

That is all you will ever get. Try to make the most of it (as
you must to follow-through on character assassination).

>I'm sure she's nothing like you.

She is female. I am male.

>She undoubtedly has
>no idea of how you spend the bulk of your time here.

Incorrect again. We have individual computers situated
on adjoining desks in our southern home office. We do
not keep secrets from one another and discuss many
things.

>> Heil again demonstrates mean-spirited and uncivil behavior.
>
>Awwww--did the little old pirhana get his feelings hurt?

Quod Erat Demonstrandum.

[Heil demonstrates that which is remarked about him]

>> Heil is deliberately misdirecting from the subject to
>> character assassination.
>
>No, Heil is trying to determine if you observe in your habits here what
>you decry in others. My observation is that you don't.

Heil is once again trying to misdirect.

Heil has NO qualifications in psychology or human behavior.

>There was nothing about license grants in what I asked about your
>behavior here. Don't you want to address the points in that material?

Those "points" have been addressed many times. Stamped,
wrapped, and shipped faster than over-night delivery. Heil
either didn't get them or refuses to acknowlege the contents.

>> Heil once again misdirects to character assassination.
>
>It seems that you don't have a character to assassinate.

QED.

>Not at all, Len old boy. I quoted what I'd asked you. I quoted the
>profile. I asked if you'd care to comment on any of the items after
>making a comparison between the profile and what I asked. You've not
>done so. Do you find that embarrassing?

No.

I find only that Heil tries to keep up character assassination.

>> Heil cannot discuss the subject. He has no valid arguments.
>
>What subject is it that you address when you belittle someone's job or
>experience.

Heil's statements of his "experiences" in Guinea-Bisseau are
those of an amateur-thinking professional. Real professionals
in radio had long since (before that tale) worked out proper
procedures on HF communications.

Heil bristles at corrections. Heil gear-shifts from subject to
personal character assassination for not loving, honoring, or
respecting his might accomplishments and experiences.
Perhaps that is the "transmission" analogy of morse code
as cited in another thread...

>You aren't even willing to provide any material you have which refutes
>the N2EY profile or of the questions I've asked you. How has your
>character been assassinated?

If Heil doesn't understand how his own character assassination
techniques are observed, he has truly gone over the bend into
a radio god fantasy delusion.

>What explanation can you provide for the
>abundant examples of your writings which lend proof to what is outlined
>in the N2EY profile?

Both Heil and Miccolis are PCTAs of an extreme order. That
itself is an "explanation" for their behavior and "profiling." :-)

>N2EY: "Besides, here's a simple, plain fact:
>
>No matter what job, educational level, employer, or
>government/military service that a radio amateur has, if said radio
>amateur opposes Mr. Anderson's views, he/she will be the target of Mr.
>Anderson's insults, ridicule, name-calling, factual errors, ethnic
>slurs, excessive emoticons and general infantile behavior."

Repetition of character assassination doesn't make it true.

>You've discussed. I'm not required to agree with you. I'm not required
>to be silent regarding your opinions.

Use of character assassination techniques doesn't make it
free speech. See US civil law on libel and slander.

In article <3E7899CC.81F8D963@earthlink.net>, Dave Heil <k8mn@earthlink.net>
writes:

>A radio amateur. You are some guy who has been standing on the
>sidelines for decades.

Not at all. I've been a radio and electronics professional for over
a half century.

Amateur radio does NOT represent the sum total of all radio
communications. It is just a hobby activity, a recreation. It is also
quite a minor activity in the whole field of radio communications
worldwide.

>Yet you tell us that you know best how amateur
>radio should be regulated.

No, I present my arguments for a modernization of US amateur
radio regulations.

As an example, use of morse code as a communications mode
IS obsolete. Worldwide. It is just not defunct, extinct.

Other radio services worldwide have either dropped morse code
mode communications or never considered it in the beginning of
a radio service.

The FCC does not demand use of morse code over and above any
other mode by US radio amateurs. All allocated modes are
optional for use by all US amateur radio licensees, any class, any
amateur band. Why does the morse code test remain other than
the inertia and lobbying of old-timers at the ITU?

The FCC stated publicly in 1990 and 1999 that it does not consider
morse code skill to be of value in the FCC determining whether or
not an amateur radio license applicant should be granted a
license. The morse code test remains as a requirement for
license grants for all license classes having below-30-MHz
privileges. Morse code testing itself is obsolete.

>You insult amateur radio (see any Anderson
>comments about public service efforts in emergencies)

Incorrect. I negatively criticize ARRL for exaggerated spin
on amateur radio's alleged importance during national
emergencies. ARRL seeks to interest its membership and
to gain new members. That activity results in an
exaggeration of amateur importance, a mood thought

necessary for membership group-think.

>You insult those
>who choose to use morse code and who support morse testing.

Yes. The major reason is that old-time morse code users have presented themselves to the public as experts in radio and procedure when they are obviously not experts in radio of modern times. Their procedures are fixed to the standards and practices of six decades ago.

Those who love, honor, and worship morse code are fixated on their enobled aptitude and resultant skill. Such do not hesitate to say they are the best in radio because of that single skill... long after morse code became obsolete.

>You insult the ARRL.

Incorrect again. I negatively criticize ARRL for their public special-interest group lobbying activities as being rooted in the distant past. I negatively criticize ARRL for their "big-lie" techniques in self-serving propaganda. I negatively criticize ARRL for attempting to be a second government level on the control of US amateur radio regulations...when they have no such control or representation.

ARRL membership is not a majority group. It is a minority group of, at best, only a quarter of all licensed US radio amateurs. ARRL is a private membership organization. It is not an arm of the US government.

ARRL does provide services for their membership, but such services are lesser in comparison to all of its assumed authority in knowing what is best for the majority of licensed US radio amateurs.

ARRL is a private special-interest group. They are not divine. They made themselves into a virtual monopoly of amateur radio opinion and information in the USA...beating out earlier competitive national membership organizations. ARRL is a public political entity. ARRL is itself controlled by a small minority of its membership. Absolute power corrupts.

>You insult and impugn those who work for the ARRL.

Incorrect again. I've engaged ARRL staff in open debate in public on certain matters of radio amateurism. That does not require either love, honor, respect or worship of them. They are humans, not radio gods who must be obeyed.

>You insult amateur radio's traditions.

Incorrect once more. I do not love, honor, respect, or worship standards and practices in amateurism established before I

was born. All of radio is only 107 years old. Radio has grown, advanced much, improved by gigantic leaps in technology since a time of 35% of its life. All of radio has not remained static, unchanging, rooted into place...except some things in amateur radio.

I do not love, honor, respect, or worship fraternal order symbolism such as the so-called whouff-hong, rettysnitch, verneable sayings of "T.O.M.," or some misplaced idealism that places amateurism in radio far above all other activities and accomplishments in the giant other world of professional radio.

The thought that a National Traffic System composed of amateurs as either vital or a necessity is ludicrous in this modern age. The general public has a far greater ability to communicate nationally or internationally today than in the primitive radio days of 1914. One in three Americans now have some form of Internet access. There are about 135 million cellular telephone subscribers in the USA. Direct-dial telephony is possible to nearly every other telephone in the entire world.

It is high time that the extreme conservative traditionalists in US amateur radio try to approach modern times and methods rather than remaining mired in a fantasyland of old radio tales and mythological triumphs.

>Why would such an individual want to become a radio amateur?

For personal pleasure, to engage in a hobby recreation involving radio. A problem with certain individuals is their perverse definition of "personal pleasure."

Sociopaths and self-righteous savants find great pleasure in denigrating, demeaning, and attempting to demoralize others through any means possible. That is sometimes considered an individual survival tactic...to release tensions resulting from frustrations of theirs of regular life. Others within that group are simply twisted, cannot get along with others, and attempt to control them.

>What interest could such an individual have in amateur radio?

Those sociopaths and self-righteous individuals use amateur radio accomplishments to show they are better than the common human. They need that image for their self-esteem. They take pleasure in denigrating others who do not honor, respect, and worship their mighty accomplishments as amateurs.

>Why would such
>an individual be concerned about regulations governing amateur radio?

Amateur radio regulations MUST be fixed, static, rooted in the status quo of regulations when the sociopaths and self-righteous were first licensed. Change of such regulations is anathema to them. Regulation changes mean loss of status, rank, privilege... all highly important to the self-centered, those needing self-esteem on steroids.

Quite probably the overall average of US radio amateurs are active in the hobby for the social interaction and for radio technology interest. It is obvious that the overwhelming majority of licensed US radio amateurs do NOT belong to ARRL or follow absolute ARRL guidance in all things.

>I a god or am I not a god?

Heil thinks he is a radio god according to his remarks in here.

Heil once bragged about bad procedure in HF professional radio
in order to exemplify morse code "use." Very questionable
since professional radio prodedures had already ruled out such
things over two decades prior to the alleged incident. Ergo,
Heil had such poor professional experience that he was
categorized as an amateur in abilities.

The character assassination by Heil continues. This may be
because he feels disrespected and dishonored by those who
do not consider him a god of radio. Heil has a standard operating
procedure of misdirection from subjects to personalities. Witness
taking small items and magnifying them into exaggerated non-
subjects.

Attempted disparagement of my wife is just such a case of
character assassination. Heil does not understand that studies
and practical application of psychology are part and parcel of
Social Work. Heil is welcome to examine the curricula on
Social Work at any college or university to see this. It is
doubtful that Heil would admit to seeing it as this takes away
validity to his character assassination.

>> Heil is ignorant as well as irrational, mean-spirited, uncivil,
>> and arrogant.
>
>We can go over the N2EY profile of Leonard Anderson again if you like.
>I think we can find numerous examples of your having made comments which

>show ignorance and in which you demonstrate that you are irrational,
>mean spirited, uncivil and arrogant.

The subject is "Honest code elimination question," not an overuse
of Heil's whining about behavior disrespecting and dishonoring his
radio god-hood.

>> This is not a newsgroup about psychology.
>
>Then why did you state credentials through your wife in an earlier post?

I stated "credentials" in reference to another subject about
the subject of credentials.

Heil needs picayune remarks as the ignitor for more mean-spirited
uncivil character assassination when he has no valid response on
subject matter.

Heil demonstrates a character flaw, minor sociopathy and self-
righteous god-hood demanding that Heil must always be right.

>> Psychologists might be interested in studying Heil as a
>> case example.
>
>They might be.

There are many aberrations to human nature. Heil exhibits
several of them.

>They'd be certain to express interest in studying a
>seventy year old man with a fixation on amateur radio despite the fact
>that he isn't a radio amateur.

Heil is again attempting character assassination. There is no
"fixation." I have a mild interest in amateur radio. Radio is a
a very big, very widespread subset of the whole technology of
electronics and electron physics. I have a very strong interest
in the overall technology of electronics. I made that my career
choice for life a long time ago.

Note that "career choice" involves professionalism.

>You'll be quick to point out that your
>rants address getting into amateur radio.

There are no "rants." There are some arguments about the
modernization (long overdue) about a radio hobby activity
requiring federal licensing.

>With your declaration of
>several decades of interest, you'd be one of the slowest entrants on
>record for getting into amateur radio. If we discount the several
>decades, you've posted here for seven or more years and in that period
>of time, you still haven't gotten in.

Heil once again misdirects from the subject of code test elimination to character assassination: Heil's attempted charge of "failure" on my part for getting into amateur radio...the way Heil got into amateur radio.

I began legal (and with proper procedure) HF transmissions for communications (on a far larger scale than any amateur station) in February of 1953. Since then I have been involved with legal transmission control of RF radiation for communications and radionavigation over a wider range of the EM spectrum than is presently allocated to any radio amateur anywhere. None of that professional activity involved any amateur knowledge or amateur procedural standards or tests about amateur radio or receiving any federal license grants in or about amateur radio..

The large technological field of electronics and radio is fascinating to tens of thousands of professionals in that activity that have made it their career choice. It is active, it has always been growing, and electronics have become a part of everyone's life activities in most parts of the world.

I also find it most fascinating that a small group of amateurs persist in the Luddite fashion of old to maintain and freeze-dry to standards and practices of radio that is over a half century old. That extreme conservatism is manifest by the manic "necessity" to maintain morse code testing for the foreseeable future in a hobby activity, a radio recreational endeavor that involves licensing because of the nature of RF transmission.

It is also fascinating to watch a minority within a minority of all radio to attempt making their amateur recreational activity as representing expertise in ALL of radio...when they clearly have no such expertise or working knowledge. That mani-festation is part of the human territorial imperative (studyable in introductory psychology courses, once an engineering major requirement in some states). "Turf" in the common colloquial phrasing. The holding up of amateur credentials and tenure as an amateur is implicit in that "turf" as if it is a roll model for all to emulate.

An interesting thing about "turf" ownership is the strong righteous demand for respect and honor for now-traditional amateur activities. This is extended to imply expertise in all of radio but it is still only in amateurism...and it forms an insular elitism among the minority group where the prevailing thought seems to be that few other humans could achieve such noble accomplishments. Rank, status, privilege seems to have become the life goal of the extreme conservative amateurs...the interest in ordinary human interactions and fascinating technology taking a very low ranking.

The worst aspect of the minority of a minority of amateurs (of rank, status, privilege) is the despicable treatment of so-

called "outsiders." That is the ultimate extension of elitism
of the self-professed experts in amateurism. Do as they do,
honor and respect them for they exist...

>
>No, it's the definition of "useful". If something has a use, it is useful.

Circular logic is "useful"...for those cases where a desired
thing cannot be defended and can be "redefined" by means
of circular logic. :-)

>Then what is your definition of "useful"?

What is yours? That circular logic is useful? :-)

>How does that cause any harm? The non-hams I have met are impressed and
>intrigued that hams use Morse code and are often amazed at even my limited
>skills with the mode. "You mean you can understand that?!" is a common
>comment.
>"Just like listening to someone talk" is my usual reply.

That's nice. Square, not circular.

Perhaps Miccolis should attempt a campaign to introduce
morse code as an effective communications mode to other
radio services?

>"It's not obsolete to the people who use it. Just like propeller airplanes,
>sailboats, manual transmission cars, or many other things."

Once, at an almost prehistoric time of primitive electronics
technology, morse code (on-off keying) was the ONLY way
to communicate via radio.

107 years after the birth of radio, the ONLY radio service
having a large number of users of morse code is amateur
radio. Morse codings aren't used in any commercial
wired or wireless communications.

Morse code is OBSOLETE. It just hasn't become extinct.

>"No. All sorts of people are amateur radio operators, and they have all sorts
>of interests in radio."

Only the best hams use morse code. Morse code is useful.

The best in US amateur radio is working DX on HF with CW.

Gosh old timer, those phrases are right out of the hymnbook.

>Perhaps you mean we should go back to requiring a code test for all ham
>licenses, so there is no tying of any license class to the code test.

Perhaps you have to destroy the village in order to save it?

Tell us all what Shah "meant."

>Sure it is. Hams can use any authorized mode. The test requires certain
>knowledge and skills, that's all.

Morse code is useful. Only the best hams use morse code.

Let's see some more circular logic. Fascinating to see things
go around and around doing nothing...

No, passing the code test does not mean they know the band plan. The
statement clearly says that the Tech needs to know the regulations before
operating in the HF bands. They need to know that HF priviliges require
having passed the code test. This is why band plans and FCC regulations are
on the test.

Are the awards called "proficiency" awards? Who is issuing the
awards, and are you assuming proficiency because that is what level at
which the awards begin?

This is obviously not an FCC endeavor.

> Of course much higher levels of proficiency are attainable, but that's another
> story.

Perhaps higher speeds are attainable, but isn't "proficient" really
just proficient.

> Thus, a 13 wpm code test is a code proficiency test because 13 is greater than
> 10, but a 5 wpm code test is not a code proficiency test because 5 is less than
> 10.

In all of my years reading Part 97 and subsequent changes, I've never
seen the word "proficiency" used to describe any of the exams. Why do
you assign the term to what the FCC is doing?

> So when someone says their goal is 'elimination of the Morse code proficiency
> test for any amateur radio license in the USA', it is accurate to reply that
> their goal has been accomplished.
>
> 73 de Jim, N2EY

It is innacurate because none of the exams were ever touted as
proficiency exams by the federal agency that issued them.

How nice of you to give Jim the definition of "proficient." I'd
expect you to tell him to go look it up.

Anyway, many is how many? What percentage of all QSO's is that?

> One thing I know is that there is no answer to your question which will
> please you.

Dave, I'm not asking to be pleased nor displeased. I want to know
what is "proficient."

You may delude yourself all you like. Someone whose top
> morse speed is five wpm is not proficient in the use of morse.

It would appear that you delude yourself when you claim to know what
proficiency is, but cannot put your finger on it at this time.
Meanwhile, you're able to describe many others as not proficient.

It just doesn't ring true.

You may define proficiency using a wpm rate, and an accuracy level.

Jim is on record at 10WPM.

> Now I'm heading back to CNN's coverage of the war.

The price of gasoline just dropped. I wonder who is winning?

In a followup post I stated my reason for the 10 wpm definition.

> The definition of "proficient" is
>"skilled" or "expert".

10 wpm is skilled at a journeyman level. Definitely not expert. Note that I
said 10 wpm was the absolute lowest speed that could be called "proficient".
IOW it's the very beginning of proficiency, nothing more.

>While 10 wpm may mark a journeyman level, I

N2EY, as an EE, don't you have more pressing matters than to be a tabulation keeper for ARS License Numbers? And, on top of that you use Morse code - Double sin. You should not do tabulation. Let the official organizations do that. However, your real sin is the advocacy of Morse code <for ALL>.

Tabulation. It does not increase its membership numbers, its activities, or its influence. It is no act of devotion.

In regards to Morse code -you are now the passive receiver/transmitter of an AUDIOMOTOR skill. Note this is NOT a radio or electronics skill.
It is a VISCERAL skill. It has NO importance anywhere, other than in a self-congratulatory organization.

Even if you were a Ham first, then became an EE, learn to put Morse in perspective. Ham radio is primarily NOT a "hobby". The traditions, rituals, practices form a unified belief system that resembles a CULT.

Ham radio is useful if you selectively participate. Those occasional useful aspects then benefit you. Otherwise it can be a drain. One is the sum total of experiences, paid with the price of efforts. So, being immersed in the "Ham" radio hobby can result in the negative.

A spouse/and our relative would give you a piece of their <unkind> words for that. I know. Sadly, I had to try and defend Ham radio. I try to say Hams are not weird. They do socialize. They are professionals and interested in technical aspects. Worst part is, from my own observation, I actually agree with them.

Those that do not believe and stay have self esteem issues. Those that do believe are delusional. I am not talking about image to impress family, friends, or society. I am talking about one's own pride.

Ah. He starts to insinuate libel and slander again. He only does that when he has had it with someone
who has really poked his sensitive spot. Of course N2EY's definitive profile of AveryFineLabelman, maybe should be AveryFineLibelman, being exactly accurate, does exactly that, so here he goes
with his "libel/slander" hints threatening again. Stuff it, Foghorn Jackass, you've been tapped, and

tapped good.

WHO GIVES A RAT'S PATOOTIE????? This is an AMATEUR RADIO newsgroup,
which you have continuously trolled with the singleminded purpose of trashing ham
radio and
every accomplished practitioner of it, clearly obvious to any clearminded
observer. You clearly have
a rabid obsession toward ham radio, as opposed to your vaunted "professional"

status which if
at once duplicated and even very far exceeded by many -MANY!- hams, both posting here and
among those who consider you to be not worth even a second look. So live with it.

Despite the subject thread, you've made a claim that your character has
been assassinated. Your character can't suffer because you do the
things which the N2EY profile of you says you will do. If you don't
wish to discuss it, why bring it up?

> It is not 'Dave Heil's opinions of someone who does not worship,
> respect, or honor him."

I'm not looking for any of the those things. You are rude and uncivil.
In the time I've posted here, I've always observed you to be rude and
uncivil.

> >> This is not a newsgroup about psychology.
> >
> >Then why did you state credentials through your wife in an earlier post?
>
> A much earlier post. That post was on credentials alone.

Except that it turns out that there aren't any.

> Why do you insist on making such a fuss over my wife?

A fuss? You left us with the impression that she had credentials in
psychology. I suggested you show her some of your posts.

> Isn't it just another ploy in attempting character assassination?

There'd have to be one ploy before there could be another.

> >Your wife isn't a target of anything.
>
> Yes, she is. Heil makes a despicable attempt at character

> assassination by relationship.

Do you believe that I think she's a toad just because you are? I don't
think that at all.

> >We have only your comments relating to her.
>
> That is all you will ever get. Try to make the most of it (as

I've already admitted that I have no qualifications in psychology.
That said, I was under the impression that someone in your house had
some. I do have qualifications as an observer of human behavior.

> >There was nothing about license grants in what I asked about your

Why'd you make the comment about licensing?

> >> Heil once again misdirects to character assassination.
> >
> >It seems that you don't have a character to assassinate.
>
> QED.

You've attempted to chide me about sticking to the thread. You've been ranting for several days about character assassination. You've not once tried to show how your character has been assassinated.

> >Not at all, Len old boy. I quoted what I'd asked you. I quoted the
> >profile. I asked if you'd care to comment on any of the items after
> >making a comparison between the profile and what I asked. You've not
> >done so. Do you find that embarrassing?
>
> No.

Interesting. I think most folks would if they found themselves in a similar situation.

> I find only that Heil tries to keep up character assassination.

You keep writing that but you've not explained how my quoting N2EY's profile of your likely actions below a portion of one of your posts where you actually do that which is predicted, amounts to character assassination.

> >> Heil cannot discuss the subject. He has no valid arguments.
> >
> >What subject is it that you address when you belittle someone's job or
> >experience.
>
> Heil's statements of his "experiences" in Guinea-Bisseau are
> those of an amateur-thinking professional.

No they aren't. They were the statements of someone who operated a system put in place by others. The system worked fine without assistance or guidance from you. I'm sure it was an oversight. The Department of State likely doesn't know about all of your vast experience. My question was, what subject is it that you address when you belittle someone's job or experience?

By the way--

N2EY: "Besides, here's a simple, plain fact:

No matter what job, educational level, employer, or
government/military service that a radio amateur has, if said radio
amateur opposes Mr. Anderson's views, he/she will be the target of Mr.
Anderson's insults, ridicule, name-calling, factual errors, ethnic
slurs, excessive emoticons and general infantile behavior."

slurs, excessive emoticons and general infantile behavior."

> Heil bristles at corrections. Heil gear-shifts from subject to
> personal character assassination for not loving, honoring, or
> respecting his might accomplishments and experiences.
> Perhaps that is the "transmission" analogy of morse code
> as cited in another thread...

You haven't corrected me. You can't correct me on the issue of what I
did in Guinea-Bissau. All you've done repeatedly is call it a snow
job. What kind of moron tells somebody else what he can or can't have
done in his job when said moron 1) has little knowledge of the job, 2)
has no knowledge of procedures outlined by the employer or 3) wasn't in
the least involved with any aspect of the situation? This is much like
your expertise in the regulation of amateur radio. You are not involved
but you know what is best. That's typical sidewalk superintendant
stuff.

> >You aren't even willing to provide any material you have which refutes

> a radio god fantasy delusion.

So far, you're the only fellow who seems to have observed any such
thing. You won't even say how you're character can have been
assassinated in light of the examples I provided.

> >What explanation can you provide for the
> >abundant examples of your writings which lend proof to what is outlined
> >in the N2EY profile?
>
> Both Heil and Miccolis are PCTAs of an extreme order. That
> itself is an "explanation" for their behavior and "profiling." :-)

That's nice. What explanation can you provide for the abundant examples of your writings which lend proof to what is outlined in the N2EY profile?

> >N2EY: "Besides, here's a simple, plain fact:
> >
> >No matter what job, educational level, employer, or
> >government/military service that a radio amateur has, if said radio

> >slurs, excessive emoticons and general infantile behavior."
>
> Repetition of character assassination doesn't make it true.

Repetition of an accusation of character assassination doesn't make it true. I'll be happy to look at your explanation of the existence of things which you've written which would seem to be proof of N2EY profile.

> >You've discussed. I'm not required to agree with you. I'm not required
> >to be silent regarding your opinions.
>
> Use of character assassination techniques doesn't make it
> free speech. See US civil law on libel and slander.

If you've believe I'm in violation of U.S. Civil law, there are avenues open to you for seeking redress of your grievance. My advice to you is to skip your typical references to Nazis and any cute names you think up for those involved with the courts. You'll want to keep in mind the copious amount of archived material, written by you which would then be introduced in any such action.

Now if you could only make that stuff disappear...

Sorry, Leonard. That doesn't count for squat in amateur radio except
that you might find it easier to pass the written exams.

> Amateur radio does NOT represent the sum total of all radio
> communications. It is just a hobby activity, a recreation. It is also
> quite a minor activity in the whole field of radio communications

Right. One in which you are not involved.

> >Yet you tell us that you know best how amateur
> >radio should be regulated.
>
> No, I present my arguments for a modernization of US amateur
> radio regulations.

Based upon what experience?

> As an example, use of morse code as a communications mode
> IS obsolete. Worldwide. It is just not defunct, extinct.

It is no more obsolete than AM or SSB. All are used currently by radio
amateurs. Shouldn't matter to you. You aren't involved.

> Other radio services worldwide have either dropped morse code
> mode communications or never considered it in the beginning of
> a radio service.

Sure sounds like you're talking about the elimination of a mode rather
than the elimination of testing for a mode. It really doesn't matter
what other services use or don't use. Radio amateurs worldwide use
morse every day.

> The FCC does not demand use of morse code over and above any
> other mode by US radio amateurs. All allocated modes are
> optional for use by all US amateur radio licensees, any class, any

> amateur band. Why does the morse code test remain other than
> the inertia and lobbying of old-timers at the ITU?

We've been here and done this. No one will come up with a response
which will please you, a person not involved in amateur radio.

> The FCC stated publicly in 1990 and 1999 that it does not consider
> morse code skill to be of value in the FCC determining whether or

You write "incorrect" but the rest surely reads like "correct".

> ARRL membership is not a majority group. It is a minority
> group of, at best, only a quarter of all licensed US radio
> amateurs. ARRL is a private membership organization. It
> is not an arm of the US government.

Now who wrote that the League is an arm of the U.S. government? Nobody
here wrote anything like that. Are you watching the Sci-Fi Channel
again? The ARRL is America's biggest amateur radio membership
organization. Writing "at best a quarter" is piffle.

> ARRL does provide services for their membership, but such
> services are lesser in comparison to all of its assumed
> authority in knowing what is best for the majority of licensed
> US radio amateurs.

...and more piffle.

> ARRL is a private special-interest group. They are not divine.

...and you probably wonder why ham radio ops all over the land aren't
putting up a statue in your honor after all you've done for them.

> >Why would such an individual want to become a radio amateur?
>
> For personal pleasure, to engage in a hobby recreation involving
> radio. A problem with certain individuals is their perverse
> definition of "personal pleasure."

I can't envision amateur radio ever bringing you personal pleasure, Len.
As a matter of fact, I can't envision you ever taking the first step to
obtain a license.

> Sociopaths and self-righteous savants find great pleasure in
> denigrating, demeaning, and attempting to demoralize others
> through any means possible. That is sometimes considered an
> individual survival tactic...to release tensions resulting from
> frustrations of theirs of regular life. Others within that group are
> simply twisted, cannot get along with others, and attempt to
> control them.

You mean like guys who aren't participants in amateur radio who would
tell us how it should be regulated? I'm sorry you skipped the part
about how children shouldn't be licensed. That always makes for
entertaining reading.

> >What interest could such an individual have in amateur radio?
>
> Those sociopaths and self-righteous individuals use amateur
> radio accomplishments to show they are better than the common

> human. They need that image for their self-esteem. They take
> pleasure in denigrating others who do not honor, respect, and

> were first licensed. Change of such regulations is anathema to
> them. Regulation changes mean loss of status, rank, privilege...
> all highly important to the self-centered, those needing self-
> esteem on steroids.

Poof! That was your rant going up in blue smoke. The regs have changed numerous times since I was licensed. They changed again nearly three years ago. My self-esteem is intact. You did everything but answer the question.

> Quite probably the overall average of US radio amateurs are active
> in the hobby for the social interaction and for radio technology
> interest. It is obvious that the overwhelming majority of licensed
> US radio amateurs do NOT belong to ARRL or follow absolute
> ARRL guidance in all things.

Had to get in that last bit of sniping at the ARRL, huh? You're your own worst enemy.

I didn't bring up "character assassination." Heil brought it up.

One might observe Heil vomited it up...in quantity. :-)

The subject thread title is "honest code elimination question."

>> It is not 'Dave Heil's opinions of someone who does not worship,
>> respect, or honor him."
>
>I'm not looking for any of the those things.

Of course you are. You must. It is your nature.

Radio gods are always like that... :-)

>You are rude and uncivil.
>In the time I've posted here, I've always observed you to be rude and
>uncivil.

No, I've been Leonard H. Anderson all the time...although with
different screen names on AOL.

>A fuss? You left us with the impression that she had credentials in
>psychology. I suggested you show her some of your posts.

No, radio god Heil wanted another flame war on "credentials."

Poor baby Heil just doesn't know or understand certain
Masters Degree curricula or requirements. Not my problem
to educate the poor baby radio god.

>> Yes, she is. Heil makes a despicable attempt at character
>> assassination by relationship.
>
>Do you believe that I think she's a toad just because you are? I don't
>think that at all.

Tsk, tsk, tsk...there goes Heil again with more character
assassination. :-)

>What character assassination?

See Heil quote. See Heil get red-faced. See Heil stamp his
feet. :-)

>She probably has some redeeming human qualities as well.

Tsk, tsk, tsk. Does Heil really want to get into comments
about wives? I don't think so...

>So she's aware of your rants.

Aware of what? She's only aware of my spending some time
on the newsgroup. She can turn to her left right now and
see me type this. No problem here. Obviously one there. :-)

>Not at all, Len. You'd have to demonstrate that you aren't a little old
>pirhana.

Tsk, tsk, tsk...there goes Heil again with character
assassination...

>I've already admitted that I have no qualifications in psychology.

That among many such qualification lacks. :-)

>That said, I was under the impression that someone in your house had
>some.

There are here. Actually, the two Masters are in a box at the
northern house in Washington.

> I do have qualifications as an observer of human behavior.

Very questionable considering some of Heil's character
assassination just in this posting. :-)

>Why'd you make the comment about licensing?

About what licensing?

>You've attempted to chide me about sticking to the thread.

Radio gods cannot be chided. Maybe with some cilantro...

>You've been
>ranting for several days about character assassination.

Have I? Does that disturb His Highness?

>You've not once
>tried to show how your character has been assassinated.

Tsk, tsk, tsk. Poor Heil can't read well...only sees things
he wants to see...

:-)

> Heil thinks he is a radio god according to his remarks in here.

Bad call, Len. I've never once written anything about being a god of
anything. I even corrected Brian when he mistakenly believed me to be
the greatest DXer in the world.

> Heil once bragged about bad procedure in HF professional radio
> in order to exemplify morse code "use." Very questionable
> since professional radio prodedures had already ruled out such
> things over two decades prior to the alleged incident. Ergo,
> Heil had such poor professional experience that he was
> categorized as an amateur in abilities.

You don't get much right, do you? I didn't brag. There was no bad procedure--only a factual statement about what was used on a government circuit. That it bothers you is of no consequence. As for the rest of your statement--

N2EY: "Besides, here's a simple, plain fact:

No matter what job, educational level, employer, or government/military service that a radio amateur has, if said radio amateur opposes Mr. Anderson's views, he/she will be the target of Mr. Anderson's insults, ridicule, name-calling, factual errors, ethnic slurs, excessive emoticons and general infantile behavior."

> The character assassination by Heil continues. This may be
> because he feels disrespected and dishonored by those who
> do not consider him a god of radio. Heil has a standard operating
> procedure of misdirection from subjects to personalities. Witness
> taking small items and magnifying them into exaggerated non-
> subjects.

I'll take a crack at this one again. In light of the existence of numerous archived examples of you having written things like those listed in N2EY's profile of your likely actions, how will you ever be able to prove character assassination?

> Attempted disparagement of my wife is just such a case of
> character assassination.

You are the mother of all grins, Leonard old boy.

> Heil does not understand that studies
> and practical application of psychology are part and parcel of
> Social Work.

You intimated that your wife had credentials as a psychologist. When I referred to her as a psychologist, you wrote that she is not. Who is disparaged by being called a psychologist? Did your wife take offense at being called a psychologist? If so, I offer my heartfelt apology.

> Heil is welcome to examine the curricula on
> Social Work at any college or university to see this. It is
> doubtful that Heil would admit to seeing it as this takes away
> validity to his character assassination.

Now you have me confused, Len. Are you telling me that your wife IS a psychologist?

> >> Heil is ignorant as well as irrational, mean-spirited, uncivil,
> >> and arrogant.
> >
> >We can go over the N2EY profile of Leonard Anderson again if you like.
> >I think we can find numerous examples of your having made comments which

> "fixation." I have a mild interest in amateur radio.

That one is easy to counter, Len. I offer seven years of often lengthy
posts, laced with all the things described in the N2EY profile, to an
amateur radio newsgroup. Where's the character assassination?

> Radio is a
> a very big, very widespread subset of the whole technology of
> electronics and electron physics. I have a very strong interest
> in the overall technology of electronics. I made that my career
> choice for life a long time ago.

Oh, maybe your posts here have all been a mistake. Did you mean them
for a generic "Radio" newsgroup?

> Note that "career choice" involves professionalism.

I do take note of it. This particular newsgroup deals with amateur
radio. You know--that with which you have no fixation.

> >You'll be quick to point out that your
> >rants address getting into amateur radio.
>
> There are no "rants." There are some arguments about the
> modernization (long overdue) about a radio hobby activity
> requiring federal licensing.

Take my word for it--Google is filled with your rants. What would you
know about the need for modernization of something in which you are not
a participant?

> >With your declaration of
> >several decades of interest, you'd be one of the slowest entrants on
> >record for getting into amateur radio. If we discount the several
> >decades, you've posted here for seven or more years and in that period

> on my part for getting into amateur radio...the way Heil got into
> amateur radio.

How does pointing out that you've not taken a single step toward
obtaining an amateur radio license in the seven years you've posted here
much less in the several previous decades, turn into character
assassination. Can you offer proof that you've made some attempt and
failed? Maybe you can come up with a "Well, I've been busy" defense.

> I began legal (and with proper procedure) HF transmissions for
> communications (on a far larger scale than any amateur station)
> in February of 1953. Since then I have been involved with legal
> transmission control of RF radiation for communications and

> presently allocated to any radio amateur anywhere. None of that
> professional activity involved any amateur knowledge or amateur
> procedural standards or tests about amateur radio or receiving
> any federal license grants in or about amateur radio..

I read it. Nothing in there about any movement on your part toward
obtaining an amateur radio license.

> The large technological field of electronics and radio is > fascinating
> to tens of thousands of professionals in that activity that have
> made it their career choice. It is active, it has always been
> growing, and electronics have become a part of everyone's life
> activities in most parts of the world.

Good. That gives you something to do in addition to your busy schedule posting here.

> I also find it most fascinating that a small group of amateurs
> persist in the Luddite fashion of old to maintain and freeze-dry

> old. That extreme conservatism is manifest by the manic
> "necessity" to maintain morse code testing for the foreseeable
> future in a hobby activity, a radio recreational endeavor that
> involves licensing because of the nature of RF transmission.

Haven't you gotten the word? Morse testing is on the way out. We still have licensing for children though.

> It is also fascinating to watch a minority within a minority of

> called "outsiders." That is the ultimate extension of elitism
> of the self-professed experts in amateurism. Do as they do,
> honor and respect them for they exist...

And you said there were no rants. You're far too modest, Leonard. The couple of paragraphs above may be your masterpiece. You could have cut it down a bit though. How about, "I have all these years as a professional in radio and I get no respect from these *%$# amateurs"?

Your latest dilemma is: Do you try to snag that 5 wpm or do you try to wait it out?

I thought you handled things well in my absence, Dick. Len's assertions
of character assassination are particularly funny in light of his
inability not to do the things which Jim's handy quote says he will do.

Poor Heil's reading is fine. I can't read what hasn't been written.
In comparing the examples I provided of some of your recent postings to
N2EY's profile of you, what proof of character assassination have you
found?

Let's see.....hmmmmm...I wrote those. Tugboat Annie is Kim's persona
when she uses her nautical language. "Foghorn Lenhorn" is for you when
you start your cutesy names, Nazi references and the like. Keep in
mind, I'm not the guy accusing others of character assassination.

I don't need any experience. I only need an attorney who has much
experience.

> >Now if you could only make that stuff disappear...
>
> Why? Heil needs a place for him and Miccolis to live... :-)

No, that wouldn't be the reason. It'd be the thought of two attorneys
and a judge laughing hysterically just before your case was tossed.
No one can assassinate something which has already died.

>Why do you insist on making such a fuss over my wife?

Why do you insist on bringing her into it in the first place, Lennie?

>Isn't it just another ploy in attempting character assassination?

Ummmmm....more like suicide on your part.

>Yes, she is. Heil makes a despicable attempt at character
> assassination by relationship.

Your rules, Lennie...If someone volunteers the information to the forum,
it's fair game by everyone else.

>>We have only your comments relating to her.
>
> That is all you will ever get. Try to make the most of it (as
> you must to follow-through on character assassination).

No, Lennie...YOU keep reintroducing your spouse as you think it favors
your rants...You at once introduced her as being a psychologist and ergo
qualified to determine who in this NG was "irrational" and who isn't.

Now you state she's NOT a psychologist, but rather just a social worker
who did some training in psychology.

Unlicensed...Like you.

>>I'm sure she's nothing like you.
>
> She is female. I am male.

Are you sure? Your conduct in here leaves a lot to the imagination.

>>She undoubtedly has
>>no idea of how you spend the bulk of your time here.
>
> Incorrect again. We have individual computers situated
> on adjoining desks in our southern home office. We do
> not keep secrets from one another and discuss many
> things.

Does she know you make up lies about honorable men and credible
organizations?

Does she know you frequently call people "nazis" and other colorful adjectives in order to antagonize and humiliate those whom you can't otherwise intimidate into backing away from your spiteful bile?

I doubt it.

>Heil has NO qualifications in psychology or human behavior.

And you "know" this how?

>>Not at all, Len old boy. I quoted what I'd asked you. I quoted the
>>profile. I asked if you'd care to comment on any of the items after
>>making a comparison between the profile and what I asked. You've not
>>done so. Do you find that embarrassing?
>
> No.

Liar.

>Heil bristles at corrections. Heil gear-shifts from subject to
> personal character assassination for not loving, honoring, or
> respecting his might accomplishments and experiences.
> Perhaps that is the "transmission" analogy of morse code
> as cited in another thread...

Let's change a couple words:

"Anderson bristles at corrections. Anderson gear-shifts from subject to personal character assassination for not loving, honoring, or respecting his might(y) accomplishments and experiences. Perhaps that is the "nazi thug" analogy of professional radio engineers as cited in another thread..."

Yep. It fits.

>Both Heil and Miccolis are PCTAs of an extreme order. That
> itself is an "explanation" for their behavior and "profiling."

Both have demonstrated moderation, yea, even extreme tolerence, and their "profiling" of Herr Anderscum is so "on the head" as to make the term "Excedrin Headache" apply.

>>No matter what job, educational level, employer, or
>>government/military service that a radio amateur has, if said radio
>>amateur opposes Mr. Anderson's views, he/she will be the target of Mr.
>>Anderson's insults, ridicule, name-calling, factual errors, ethnic

And as far as Amateur radio goes...you're STILL a bystander!

>Amateur radio does NOT represent the sum total of all radio
> communications.

No, it does not, but in THIS forum it is!

>It is just a hobby activity, a recreation.

In your opinion. FCC rules and regulations do not support or condone any
one type of application of the Amateur Service over another, although it DOES
encourage certain ones.

Of course the applications the FCC encourages are the one YOU claim have
little or no impact on it's existence.

Hmmmmmm.....Guess the FCC knows something about Amateur Radio that Lennie
doesn't...?!?! Naaaaaahhhhh COULDN'T BE!

>It is also
> quite a minor activity in the whole field of radio communications
> worldwide.

For so minor a player, you sure spend a lot of time trying to disuade
others from it, Your Lyingness!

>As an example, use of morse code as a communications mode
> IS obsolete. Worldwide. It is just not defunct, extinct.

As long as it's in use, it is neither.

Bottom end of 20 meters sounded line a rock concert with all the CW this
evening.

Someone in California is veeeeeeery confused!

>>You insult the ARRL.
>

> Incorrect again.

Liar. Again.

>ARRL is itself controlled by a small minority of its membership.

That makes three. ARRL is controlled by the voting membership. A number which is in the high ninety percents, I am sure.

>>You insult and impugn those who work for the ARRL.
>
> Incorrect again. I've engaged ARRL staff in open debate in
> public on certain matters of radio amateurism. That does not
> require either love, honor, respect or worship of them. They
> are humans, not radio gods who must be obeyed.

That makes four. You have openly insulted the character of, and professional reputations of several League Staffers.

Not debate...Intentional lies and insults.

>>You insult amateur radio's traditions.
>
> Incorrect once more.

Five. Google refers.

>The thought that a National Traffic System composed of
> amateurs as either vital or a necessity is ludicrous in this
> modern age.

Only by you, Lennie. Even ongoing Homeland Defense programs integrate Amateur Radio for the very skills and programs YOU denigrate, Your Most Ignorantness.

>One in three Americans now have some form of Internet access.

Immediately deniable with simple explosives strategically placed.

>There are about 135 million cellular telephone subscribers in the USA.

And a cellular telephone infrastructure that can only accomodate about 20% at one time, and once a cell site has been denied to them that cute little hip accessory is just a paperweight.

>Direct-dial
> telephony is possible to nearly every other telephone in the
> entire world.

As long as there's an accessible cell site.

>It is high time that the extreme conservative traditionalists in
> US amateur radio try to approach modern times and methods
> rather than remaining mired in a fantasyland of old radio tales
> and mythological triumphs.

It's even a higher time that idiotic liars and ner-do-wells that continue to post drivvel in the face of facts to the contrary face up to the facts that they are wrong, and people a lot more well placed and proficient in communications practices know better than he...

>Sociopaths and self-righteous savants find great pleasure in
> denigrating, demeaning, and attempting to demoralize others
> through any means possible.

WHOA LENNIE! That had to HURT saying that and keeping a straight face! OUCH!

>Amateur radio regulations MUST be fixed, static, rooted in the
> status quo of regulations when the sociopaths and self-righteous
> were first licensed.

Who said THAT, Lennie? No one else in THIS forum has suggested ANYTHING like it...Only you...

>Regulation changes mean loss of status, rank, privilege...
> all highly important to the self-centered, those needing self-
> esteem on steroids.

Kinda like the "radio professional" who doesn't want to take an "amateur" exam because he thinks he's already done it all and knows it all, LENNIE...?!?!

Sheeesh...What a PUTZ!

Takes me 5 minutes every two weeks to post the numbers. I can spare
that much time.

> And, on top of that you use Morse code - Double
> sin.

SIN?? The USE of Morse code is a SIN?!?

Says who?

>You should not do tabulation.

I don't.

>Let the official organizations do that.

Who?

All I do is repost the license totals here twice a month so that there
will be a record as long as the archives exist. Is that a 'sin'?

> However, your real sin is the advocacy of Morse code <for ALL>.

Why?
>
> Tabulation. It does not increase its membership numbers, its activities, or
> its influence. It is no act of devotion.

What ARE you talking about?

Growth vs. decline is a policy issue. An accurate source of numbers is
needed for any reasonable discussion.
>
> In regards to Morse code -you are now the passive receiver/transmitter of an
> AUDIOMOTOR skill.

No, it's an active thing. Just like listening/talking, or
reading/writing. Just another tool in the toolbox.

> Note this is NOT a radio or electronics skill.

I use it on the radio. Therefore, it's a radio skill.

> It is a VISCERAL skill.

Is that a 'sin', too?

> It has NO importance anywhere, other than in a
> self-congratulatory organization.
>
It has importance whenever I use it on the amateur radio bands.

btw, what is this "self-congratulatory organization" you mentioned?

> Even if you were a Ham first, then became an EE, learn to put Morse in
> perspective.

What does that mean? Morse code skill is just one of the desirable
radio skills I think all hams should try to develop. I've got a
list...

For example, long ago I learned the standard phonetics "alfa, bravo,
charlie..." to improve my voice operating skills. Don't even have to
think about them now, I just rattle them off. Was that a 'sin"?

> Ham radio is primarily NOT a "hobby".

Tell it to Mr. Anderson.

> The traditions, rituals,
> practices form a unified belief system that resembles a CULT.

Nonsense.
>
> Ham radio is useful if you selectively participate.

Isn't that what we all do? Pick out the parts you like and do them. I
like Morse code, SSB, AM, FM, homebrewing, kitbuilding, ragchewing,
contesting, elmering and a few other things.

> Those occasional useful
> aspects then benefit you. Otherwise it can be a drain. One is the sum total of
> experiences, paid with the price of efforts. So, being immersed in the "Ham"
> radio hobby can result in the negative.

What ARE you talking about?
>
> A spouse/and our relative would give you a piece of their <unkind> words for

It's called being balanced.

> I know. Sadly, I had to try and defend Ham radio. I try to say Hams are
> not weird. They do socialize. They are professionals and interested in
> technical aspects. Worst part is, from my own observation, I actually agree
> with them.

You're not looking in the right places, then.
>
> Those that do not believe and stay have self esteem issues. Those that do
> believe are delusional. I am not talking about image to impress family,
> friends, or society. I am talking about one's own pride.

I have no idea what that is supposed to mean.

Get a grip, Vipul. Ham radio is about radio for its own sake, because
people find it to be rewarding in ways other than being paid money. No
'sin' in that. Do what you find rewarding and let the rest go by.

1120. Can't get any better publicity than Paul Harvey

Newsgroup: rec.radio.amateur.policy
Date: 2003-03-21 16:32:07 UTC
From: Steve Adell - KF2TI <kf2ti@arrl.net>
Message-ID: <b5fempdbn1@slb3.atl.mindspring.net>
Source record: 63206

Radio commentator Paul Harvey plugs ham radio's emergency communications role (Mar 21, 2003) -- Veteran ABC Radio Networks commentator Paul Harvey on March 19 offered some kind words for Amateur Radio. The mention was the second item on "page four" of his Paul Harvey Noon News and Comment program: "America's quiet warriors are the legion of ham radio operators, 700,000 of them, who are always at ready for backup duty in emergencies--amateur, unpaid, uncelebrated, civilian radio operators, during and after floods and fires and tornadoes. After the 9/11 attacks, hams were indispensable in reuniting friends and families. Most recently it was they who expedited the search for debris after the disaster to the space shuttle Columbia, and right now, at this moment, they are involved in homeland security to a greater degree than you would want me to make public." The commentary's enigmatic and mysterious final sentence --typical of Harvey's habit of leaving his listeners hanging--apparently refers to the fact that many Amateur Radio Emergency Service (ARES) and Radio Amateur Emergency Service (RACES) teams have ramped up their alert status as hostilities get under way in the Middle East. The entire Wednesday noon broadcast is available on Paul Harvey's Web site (http://www.paulharvey.com/). Click on the Wednesday noon link under "Listen Now."

Paul Harvey is heard 3 times a day on over 700 radio stations across the US. Granted it's not printed medium so there are some who may dispute the article. But......

You've just lost any hope of ever being taken seriously here, Vipul.

> Tabulation. It does not increase its membership numbers, its activities, or its
> influence.

...and news reporters don't actually do anything, they just report on
what takes place.

It is no act of devotion.

Was it supposed to be?

> In regards to Morse code -you are now the passive receiver/transmitter of an
> AUDIOMOTOR skill.

Being good at volleyball is a motor skill. Is volleyball a bad thing?
Is someone who is goog at memorizing electronic formulae supposed to be
better than a good volleyball player? better than someone who is good
at sending and receiving morse?

> Note this is NOT a radio or electronics skill.

The only place I've used morse is on the radio. I've never used
landlines in sending or receiving morse.

> It is a VISCERAL skill.

It is? Do you actually read the stuff you write?

> It has NO importance anywhere, other than in a
> self-congratulatory organization.

Looks like morse occupies a pretty important place in amateur radio
given that thousands of radio amateurs worldwide use it every day.
What, by the way, is the self-congratulatory organization?

> Even if you were a Ham first, then became an EE, learn to put Morse in
> perspective. Ham radio is primarily NOT a "hobby". The traditions, rituals,
> practices form a unified belief system that resembles a CULT.

I know plumbers, engineers, salesmen, funeral directors, postal
carriers, diplomats, military members, teachers, school children,
housewives, dentists, doctors, deliverymen and truck drivers who are
radio amateurs.They are Baptists, Catholics, Episcopalians,
Presbyterians, Jews, agnostics and Mormons. They are black, white,
Asian and Hispanic. Their common bond is enjoyment of amateur radio.
You, like several others present here, don't seem to be getting much
enjoyment from amateur radio. I guess everything where people bond
together in a joint interest looks like a cult to someone who sees
himself as an outsider.

> Ham radio is useful if you selectively participate.

One can participate as much or as little as one desires. The amount
time spent participating has no bearing on usefulness.

> Those occasional useful
> aspects then benefit you.

What "occasional" aspects?

> Otherwise it can be a drain.

What?

> One is the sum total of experiences, paid with the price of efforts. So, being immersed
in the "Ham" radio hobby can result in the negative.

Is that a statement of cosmic truth or something?

> A spouse/and our relative would give you a piece of their <unkind> words for
> that. I know.

How do you know?

> Sadly, I had to try and defend Ham radio.

...and I have no doubt that sadly is how you did so.

> I try to say Hams are
> not weird.

...but you spend much of your time here implying that they are.

> They do socialize.

> They are professionals and interested in
> technical aspects. Worst part is, from my own observation, I actually > agree with them.

Not all hams are professionals. Not all hams are very interested in technical aspects. No ham is required to be more technical than is sufficient to pass the exam for a license. That license permits operation on the amateur bands. I can't determine about what you are in agreement.

> Those that do not believe and stay have self esteem issues. Those that > do believe are delusional. I am not talking about image to impress
> family, friends, or society. I am talking about one's own pride.

I can't make any sense of your paragraph. It takes the form of stream-of-consciousness rambling.

Yes.

> Who is issuing the
> awards, and are you assuming proficiency because that is what level at
> which the awards begin?

The awards have been available for decades and are well-known in the
amateur community. I'm surprised you don't know all about them. The
lowest speed for which an award is available is 10 wpm, and there are
endorsements at 5 wpm intervals up to at least 40 wpm. I got to the 30
wpm level back in high school with pencil-and-paper copy. I'm better
than that these days.
>
> This is obviously not an FCC endeavor.

FCC wasn't part of the discussion.

>
> In all of my years reading Part 97 and subsequent changes, I've never
> seen the word "proficiency" used to describe any of the exams. Why do
> you assign the term to what the FCC is doing?

I didn't assign it. WK3C did. Here's a quote from a post of his from
March 7 of this year:

WK3C>Reply-To: "Carl R. Stevenson" <wk3cqth@wk3c.com>
WK3C>From: "Carl R. Stevenson" <wk3cqth@wk3c.com>
WK3C>Newsgroups: rec.radio.amateur.policy
WK3C>Subject: Re: Honest code elimination question...no flames please

WK3C>The regional positions prepared so far, as well as the national
positions
WK3C>that are known, all indicate that the elimination of the Morse
proficiency WK3C>test requirement from the ITU ("International
Telecommunications Union") WK3C>Radio Regulations will be a "slam
dunk."

Note that Carl calls it a "Morse proficiency test", not a "Morse code
test" or anything else. He came up with the term, not me, go argue
with him.

He's almost certainly correct about the slam dunk aspect, too.

Proficiency starts at 10 wpm, therefore the Morse proficiency test is
already gone in the USA. Element 1 is not, repeat not, a Morse
proficiency test.

> > So when someone says their goal is 'elimination of the Morse code
> > proficiency
> > test for any amateur radio license in the USA', it is accurate to reply
> > that
> > their goal has been accomplished.

QED.

> It is innacurate because none of the exams were ever touted as
> proficiency exams by the federal agency that issued them.

No, it's completely accurate. "Elimination of the Morse proficiency tests" and "elimination of all Morse code tests" are two different things.

--

Now, Brian, I've answered all of your questions on this subject. How about answering the following questions about your claimed T5 amateur radio operations:

What callsign was used?

What rigs and antennas were used?

Who did the equipment belong to?

What amateur bands and modes were used?

What countries and continents were worked?

How were the QSLs delivered?

73 de Jim, N2EY

>N2EY, as an EE, don't you have more pressing matters than to be a tabulation
>keeper for ARS License Numbers?

What an assinine question.

Vipul Shah, as an EE yourself, don't YOU have more pressing matters than
policing other EE's in Amateur Radio newsgroups?

>And, on top of that you use Morse code - Double
>sin.

Only a sin if you do it badly. I've worked Jim on CW. He's got a smooth,
"armchair copy" fist. No sin there.

>You should not do tabulation. Let the official organizations do that.
>However, your real sin is the advocacy of Morse code <for ALL>.

Thank-you, RRAP moderator.

>Tabulation. It does not increase its membership numbers, its activities, or
>its
>influence. It is no act of devotion

Ahhhhhh...taking a hint from Lennie and making the Amateur
Radio-vs-Religion analogies....Things kinda slow in the Bashing Amatuer Radio
business today, huh Vippy?

>In regards to Morse code -you are now the passive receiver/transmitter of an
>AUDIOMOTOR skill.

Nothing "passive" about utilizing Morse Code, Vippy. It requires sharp
alertness, clear cognitive function, and reasonably quick reflexes to do well
(those with Morse readers and keyboard senders notwithstanding).

>Note this is NOT a radio or electronics skill.
>It is a VISCERAL skill

WHAT AN IDIOT! >>NOT<< a radio skill?
BBBWWWHHHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAH
AHAHAHAHAHAHAHAHAHAHAHAHAHAHA ! ! ! !

>It has NO importance anywhere, other than in a
>self-congratulatory organization

Which "organization" would THAT be, Vippy? "Organization membership" is not required to be a licensed Amateur Radio operator, regardless of the mode used.

>Even if you were a Ham first, then became an EE, learn to put Morse in
>perspective. Ham radio is primarily NOT a "hobby". The traditions, rituals,
>practices form a unified belief system that resembles a CULT.

The further insistence upon by yourself only makes you look even MORE idiotic, IF that were possible!

>Ham radio is useful if you selectively participate. Those occasional useful
>aspects then benefit you. Otherwise it can be a drain.

BE A DRAIN.....?!?!

How? Were you FORCED to take an Amateur Radio exam, Vippy? Did Palestinian terrorists drag you down to the local Amateur Radio supplier and FORCE you to buy a radio? Do armed men descending from black helicopters MAKE you get on the air every day...???

>One is the sum total of
>experiences, paid with the price of efforts. So, being immersed in the "Ham"
>radio hobby can result in the negative.

The ONLY "negative" experience I have EVER had associated with Amateur radio is "meeting" complete idiots like you, Lennie and Brian that come up with these really wild, wierd assertions that are not the least little bit based in fact or reality!

>A spouse/and our relative would give you a piece of their <unkind> words for
>that. I know. Sadly, I had to try and defend Ham radio. I try to say Hams are
>not weird. They do socialize. They are professionals and interested in
>technical aspects. Worst part is, from my own observation, I actually agree
>with them.

Uh huh. Yeah. Right. That's why so many spouses join their already licensed spouse and get licenses, participate in Amatuer Radio social functions and otherwise support and condone the hobby.

>Those that do not believe and stay have self esteem issues. Those that do
>believe are delusional. I am not talking about image to impress family,
>friends, or society. I am talking about one's own pride.

"...one's own pride"...?!?!? Vippy, I see that you are still in the Amateur Radio database. If it's such a drain and social scar, WHY are YOU still licensed?

Here's a chance to show what kind of a scrupled, integrity-strong kinda guy you are, Vippy...let's see you match actions with words...

Take your FCC form 660 out (both the wallet and wall copies) and write "PLEASE CANCEL" across them. Scan a copy of the then-cancelled licenses and post to an AOL Hometown "profile" homepage with it so we can all see.

THEN send it to the FCC in Gettysburg. When I see your license drop off the database, I will know that you are a person of integrity and principle.

UNTIL then, you're just a punk with a bad attitude that can't get his way, so you have to demeaning and hateful instead.

So which way is it, Vipul? >>IS<< it the social stigma you claim it is, and therefore you will cancel your license, or are you lying?

I think you are lying. And I DON'T think you have the strength of character or principles to match your words with meaningful action.

So...Are you man enough to back it up?

Steve, K4YZ

And standing on the sidelines of amateur radio for at least that long.

btw, "radio and electronics professional" covers a lot of ground.
Anybody who ever worked in a Radio Shack or circuit City store can
claim the same thing.
>
> Amateur radio does NOT represent the sum total of all radio
> communications.

I don't know anyone who claims it does.

> It is just a hobby activity, a recreation.

Incorrect.

> It is also
> quite a minor activity in the whole field of radio communications
> worldwide.

Then why are you, a non-participant and bystander, so obsessed with
it?
>
> >Yet you tell us that you know best how amateur
> >radio should be regulated.
>
> No, I present my arguments for a modernization of US amateur
> radio regulations.

Once in a great while. The rest of the time you behave as described in
my oft-quoted profile.

Your "modernization of US amateur radio regulations" ideas amount to
these two items, and nothing more:

1) Get rid of the Morse code test

2) Require that all hams be at least 14 years old to get any class of
license.

I think the latter was reduced by you to 12 years.
>
> As an example, use of morse code as a communications mode
> IS obsolete. Worldwide.

Only if you define 'obsolete' to mean 'in daily use by many thousands
of radio operators'. Otherwise, you're flat-out WRONG, Len.

> It is just not defunct, extinct.

Actually, it's alive and well. And growing. There are probably more
hams using Morse code today than there were hams back in the 1930s.

There are more varieties of keys, keyers, paddles, and other Morse
code related equipment available to hams today than ever before. More
models of manufactured and kit amateur radio equipment capable of
Morse code operation available to hams than ever before, too. And at
lower inflation-adjusted prices! Pretty good for an "obsolete" mode!

Here's a bit of history for ya, Len: Back in the '60s, when amateur
radio equipment manufacturers really began churning out HF
transceivers, most of those transceivers had minimal Morse code
performance and features. Some did not even allow Morse code operation
at all! For a while, it looked like the manufacturers were phasing out
Morse code capability in their equipment. But after a while, they
began improving the Morse code performance and features of their HF
transceivers. Today, all of the current HF amateur radio transceivers
I know of allow Morse code operation, and most offer adequate if not
excellent performance and features using the mode.
>
> Other radio services worldwide have either dropped morse code
> mode communications or never considered it in the beginning of
> a radio service.

Their goals and resources are different.

Are piston-engine propeller-driven airplanes "obsolete"?
Are manual transmissions in cars "obsolete"?
Are NTSC-standard television sets "obsolete"?

It is illogical to judge what hams do by what other radio services are
doing.
>
> The FCC does not demand use of morse code over and above any
> other mode by US radio amateurs.

You keep repeating that mantra, but never tell us why it's important.

> All allocated modes are
> optional for use by all US amateur radio licensees, any class, any
> amateur band.

And you can't use any of them.

> Why does the morse code test remain other than
> the inertia and lobbying of old-timers at the ITU?

This has been explained to you many, many times. It remains because
S25.5 requires it, and FCC won't change its interpretation of S25.5.

If you want Element 1 to go away, convince the FCC that they were
wrong when they wrote the R&O for the 2000 restructuring.

> The FCC stated publicly in 1990 and 1999 that it does not consider
> morse code skill to be of value in the FCC determining whether or
> not an amateur radio license applicant should be granted a
> license. The morse code test remains as a requirement for

>
Incorrect on all counts.
> >You insult and impugn those who work for the ARRL.
>
> Incorrect again. I've engaged ARRL staff in open debate in
> public on certain matters of radio amateurism.

You've accused them of fraud and dishonesty, then denied that you ever
wrote the accusations.
>
> >Why would such an individual want to become a radio amateur?
>
> For personal pleasure, to engage in a hobby recreation involving
> radio.

News flash: There's been an amateur radio license available in the USA
with no code test for more than 12 years. Full privileges license with
only a 5 wpm code test for almost 3 years.

> A problem with certain individuals is their perverse
> definition of "personal pleasure."

Sounds like you're talking about yourself, Len. ;-)
>
> Sociopaths and self-righteous savants find great pleasure in

Yep, that pretty much describes your behavior here on rrap, Len. ;-)

Steve, a couple of fifty-cent words doesn't release you from your
obsessive/compulsive behavior.

And you do humiliate, criticize and denigrate hams and non-hams alike
for sport and recreation. Bragging about how "easy" we make it should
tell you something about yourself. For example, "cruel" comes to
mind.

Best of luck to you.

OK, Carl may have made a mistake. If we could only get to the bottom
of what proficiency is.

How did you come by 10wpm being the lower margin for proficiency
again?

Did the FCC declare it so?

> > > So when someone says their goal is 'elimination of the Morse code

> >
> > Jim is on record at 10WPM.
>
> You must not have read any of my post. How is it possible for you
> respond without reading it?

Of course I read your post. You said this much code is more
proficient than that much code. That's not much of an definition.

1131. Re: Matching Words With Action...Are You Up To It, Vipul?

Newsgroup: rec.radio.amateur.policy
Date: 2003-03-21 23:13:46 UTC

From (Steve Robeson K4YZ):
>Vipul Shah, as an EE yourself, don't YOU have more pressing matters than
>policing other EE's in Amateur Radio newsgroups?

Solely practicing one's craft is foolish. Without a guard, one will get robbed.

I should focus more on the politicians and policy makers than amateur radio. For EEs, IEEE should help. They may not be as responsive as the ARRL, but they should be. As with any organization, the members should make their interest known.

>>And, on top of that you use Morse code - Double
>>sin.
>
> Only a sin if you do it badly.

As an EE, Morse code should not be a priority.

>It has NO importance anywhere, other than in a
>>self-congratulatory organization
>
> Which "organization" would THAT be, Vippy? "Organization membership" is
>not required to be a licensed Amateur Radio operator, regardless of the mode
>used.

The "Ham radio" organization.

>Take your FCC form 660 out (both the wallet and wall copies) and write
>"PLEASE CANCEL" across them.

I would like to transmit on the bands. Without the license, I cannot do that. I can leave, but then I would not get the benefits of the license.

>I think you are lying. And I DON'T think you have the strength of
>character or principles to match your words with meaningful action.
>
> So...Are you man enough to back it up?

The more useful solution would be to make changes to increase the experimentation aspects of the hobby. If Ham radio collaborates with educators and industry, this would be more useful.

1132. Re: ARS License Numbers

From: N2EY
>The USE of Morse code is a SIN?!?

An EE should focus more on other aspects than Morse code.

>No, it's an active thing. Just like listening/talking, or
>reading/writing. Just another tool in the toolbox.

Its often the PRIMARY focus of Ham radio meetings.

>> It is a VISCERAL skill.
>
>Is that a 'sin', too?

No, but its not an electronics skill in a technical hobby.

>It has importance whenever I use it on the amateur radio bands.
>
>btw, what is this "self-congratulatory organization" you mentioned?

You answered the question.

>I am talking about one's own pride.
>
>I have no idea what that is supposed to mean.

Learning Morse when one does not want to is not a sign of pride.

>Do what you find rewarding and let the rest go by.

Good idea.

1133. Re: ARS License Numbers

Newsgroup: rec.radio.amateur.policy

From: Dave Heil k8mn@earthlink.net
>Is someone who is goog at memorizing electronic formulae supposed to be
>better than a good volleyball player?

I have the ability to do realtime encoding/decoding also and enjoy that also.
Neither skill is more important in society, but this is a technical hobby.

>> Note this is NOT a radio or electronics skill.
>The only place I've used morse is on the radio.

It is translating sounds into characters. This is not an electronics skill.

> I guess everything where people bond
>together in a joint interest looks like a cult to someone who sees
>himself as an outsider.

Not when the mannerisms and traditions tend to follow certain conventions that
are not required for radio operation. Even Hams know this, thats why they say
certain things are "true" Ham activities.

Here are some examples of cult activity. Excessive jargons, hatred of CB, Morse
code, Wouff Hong (okay - cheap shot).

>> Those occasional useful
>> aspects then benefit you.
>
>What "occasional" aspects?

Antenna setups, projects, new operating modes.

>> A spouse/and our relative would give you a piece of their <unkind> words
>for
>> that. I know.
>
>How do you know?

Hard to justify going to a Hamfest or Ham meeting. There must be a useful topic
(to other, not me) scheduled to justify going to a Ham meeting.

1134. We apologize about Chirac position on Iraq

Newsgroup: rec.radio.amateur.policy
Date: 2003-03-21 23:58:41 UTC
From: no.spam.here@usenet-nomads.com
Message-ID: <C4EDF5MV37702.0407523148@usenet-nomads.com>
Source record: 63221

Many french ham operators would be glad to help the US and UK armies in their fight against Iraq.

We apologize for the position given by President Chirac that does not represent the french people as he has not been elected by the majority of the french people (he only got 82 of about 43 of votes).

More, Chirac is involved in more than 10 criminal affairs actually and he might be put in jail quite for life if Justice did his job correctly in France.

So if we can help you a bit with our radios, ask. There are french ham operators ready to do so.

Thank you for your courage to protect humanity against islamic terrorists.

If you are going to try and dissuade any of the EE's here from Amateur
licensure, I think you're going to be sorely disappointed.

>>>And, on top of that you use Morse code - Double
>>>sin.
>>
>> Only a sin if you do it badly.
>
>As an EE, Morse code should not be a priority.

Who said it's "it's a priority", Vippy? And who are YOU to make the
decision as to what should be what in another person's routine..???

WHAT monumental list of experiences qualifies you to make those decisions?

>The "Ham radio" organization

WHAT "Ham radio" organization? The ARRL? The FAR? IARN?

>>Take your FCC form 660 out (both the wallet and wall copies) and write
>>"PLEASE CANCEL" across them.
>
>I would like to transmit on the bands. Without the license, I cannot do that.
>I
>can leave, but then I would not get the benefits of the license.

Then you are two faced. You want to "have your cake and eat it too.".

I knew you didn't have it in you.

>The more useful solution would be to make changes to increase the
>experimentation aspects of the hobby. If Ham radio collaborates with
>educators
>and industry, this would be more useful.

At any second, at any moment, YOU can go into your garage/shop/office, or whatever, and do any infinite number of radio experiments that you care to do WITHOUT insulting or denigrating every OTHER Amateur radio operator, Vipul.

The American Radio Relay League already has programs that help to promote Amateur Radio and the opportunities it affords. They help to place technical materials in classrooms and instructor aids at the disposal of teachers.

Local "special services" clubs promote other operating activities and helps to place equipment in classrooms.

Now...still on the thread, what actions will YOU take in order to help put the advantages of Amature Radio in front of kids and new licensees, Vipul...That is OTHER that insulting it in CB newsgroups and calling Amateurs "cultists" to non-Amateurs...?!?!

I asked a friend of mine in the auto industry several years ago. He said it
was
probably only about 5%. Some vehicles are not available with manual
trans at all.

> > > > > It's a good idea for all drivers to have manual transmission
driving

>
> Usually true.
>
> > There's NO value to society
>
> I disagree! Less fuel used and less pollution are definitely a value
> to society.

I'll rephrase...there's not enough value to society to justify
requiring manual gearboxes. Additionally, there is an
argument that manual gearboxes allow greater pollution because
the driver can rev/race the engine while an auto gearbox
can be computer controlled throughout the entire operating
range.

> So is the ability to choose the best driver from among
> those available.

When has anyone asked you or otherwise tried to determine
who is the "best" driver for a partivular driving requirement?

> Example: Some friends go out for dinner in a stick-shift car. The
> person who drove has a big meal and feels sleepy afterwards, but has
> to drive home anyway because the others 'can't drive stick'. Of course
> it's easy to say they should have taken another car in the first
> place, but in real life such situations do arise.

So?

> > and thus the states abondoned any testing.
>
> I disagree again!
>
> I think the reasons the states we know of

Trust me...ALL states have no requirement for a manual
gearbox test requirement.

> ...stopped being fussy about
> what sort of vehicle was used for testing were:
>
> 1) it's a hassle to require a stick shift car for testing (in PA the

If the driver wanted a manual certification, the driver would
provide a manual car.

> 2) lots of people wanted drivers licenses

So?

> 3) the perceived benefits to society of having lots of people licensed
> to drive were greater than the perceived benefits of having all
> drivers pass a stick-shift test.

I've been licensed over 44 years and I have never seen any such
logic put forth in articles regarding testing.

> > > No
> > > problems with "we have to take/buy X's car because Y can't drive

Not always. The efficiencies can be different in terms of how
power is applied during acceleration, etc.

> Returning to radio for a moment, the spectrum and power efficiency of
> CW is much better than any analog voice mode. "Takes up less of the
> road", so to speak.

Less road, lower throughput. In any case, it isn't required that
any ham ever use CW so the argument has no significant value.

> > > Note that we're talking about something being a "a good idea" not

>
> IOW, folks still want them. Even though some folks might call them
> "luddites" or describe the manual transmission as "antique",
> "obsolete", or "1930s technology".

Yes. The point is no one MUST know how to drive one.

> Note how that market continues to exist even though there is no
> stick-shift test nor mandatory stick-shift use requirement....

Exactly...and the same will be the case for CW as long as hams
choose to learn and use it.

> > > Do you think it's not a good idea for all drivers to have manual
> > > transmission driving skills?
> >
> > Nope.
>
> Why not? Remember, we're talking about it being "a good idea" only,
> NOT a mandated requirement.

I belive it is only a personal choice. In today's world,
the NEED for manual knowledge is strictly personal. Has anyone heard

or read about anyone being in danger or worse because no
one was available to drive a manual gearbox vehicle?

> > I think it's a choice an individual makes. I could care

>An EE should focus more on other aspects than Morse code.

Since you are NOT a code proficient (or even trained, if not proficient)
operator, from what experience do you draw in order to make such an assertion.

>>No, it's an active thing. Just like listening/talking, or
>>reading/writing. Just another tool in the toolbox.
>
>Its often the PRIMARY focus of Ham radio meetings.

I think you're making this up. In thirty-plus years of Amatuer Radio,
I've not been to more than two ot three meetings in which "Morse Code" was the
"PRIMARY" topic.

>No, but its not an electronics skill in a technical hobby.

So, in YOUR opinion, unless it's SOLELY a "technical aspect", it has no
place in Amateur Radio? JUST discussions about circuit design and
applications...?!?!

How BORING!

>>It has importance whenever I use it on the amateur radio bands.
>>
>>btw, what is this "self-congratulatory organization" you mentioned?

>From: N2EY
>>The USE of Morse code is a SIN?!?
>
>An EE should focus more on other aspects than Morse code.

Sounds like a busman's holiday to me.

I've homebrewed (designed and built from scratch) several entire ham stations (including shack furniture and antennas), built kits, restored basket-case rigs to operating order, converted surplus, written articles for amateur radio magazines, given talks at club meetings, led Field Day operations, served as a club officer, taught ham radio classes (more theory than code, btw) operated a variety of modes and bands, helped out other hams in person and via mail and internet, and always managed to have an operative ham station of one kind or another. Is that enough of a varied focus for you?

Why should an EE focus more on other aspects rather than Morse code?
>
>>No, it's an active thing. Just like listening/talking, or
>>reading/writing. Just another tool in the toolbox.
>
>Its often the PRIMARY focus of Ham radio meetings.

Where? I'd love to attend a meeting like that! The meetings I go to are all a mixed bag of club business, socializing, programs on the latest mode or piece of gear, various technical and operational subjects, etc.
>
>>> It is a VISCERAL skill.
>>
>>Is that a 'sin', too?
>
>No, but its not an electronics skill in a technical hobby.

Neither is knowing the phonetic alphabet.

Knowing Morse code lets hams get more results out of less electronics. Perhaps that's why you dislike it so much.
>
>>It has importance whenever I use it on the amateur radio bands.

Ever hear of the "seven deadly sins"? Pride is one of them.

Doing what is necessary to achieve a goal even if part of it is not what you
want to do is a sign of maturity and responsibility.
>
>>Do what you find rewarding and let the rest go by.
>
>Good idea.

From: k4yz@aol.com (Steve Robeson K4YZ)
>If you are going to try and dissuade any of the EE's here from Amateur
>licensure, I think you're going to be sorely disappointed.

I would like more EEs or people interested in electronics in Ham radio. If an EE goes to a Ham meeting, and see what Ham radio is all about, then often they would be not be interested in Ham radio.

>>As an EE, Morse code should not be a priority.
>
> Who said it's "it's a priority", Vippy? And who are YOU to make the
>decision as to what should be what in another person's routine..???

Its common sense. Real/time encoding/decoding takes away from the more important aspects. Real EEs don't <Morse> code.
The General class license only proves you learned code.

>Then you are two faced. You want to "have your cake and eat it too."

No, there are various applications of amateur radio. I would like to find those with similar interests.

>The American Radio Relay League already has programs that help to promote
>Amateur Radio and the opportunities it affords.

What is the chance of an experimenter's club gaining such resources? Would such an organization be approved to be an "ARRL affiliated" club>

>Now...still on the thread, what actions will YOU take in order to help put
>the advantages of Amature Radio in front of kids and new licensees,
>Vipul.

I'm in limbo now. I cannot take action until a certain "situation" is resolved. Perhaps this will change soon. Most likely amateur radio will be just a diversion, so I just don't care anymore. This may sound bad, but if I get something, I can give back.

>one was available to drive a manual gearbox vehicle?

You can understand the analogy. How come N2EY cannot understand the analogy HE gave? He proposed this analogy.

Now he doesn't agree with the conclusion:
There is no NEED for Morse code testing. It may be good to learn to communicate to others that use Morse code, but it is NOT essential.

>> Not at all. I've been a radio and electronics professional for over
>> a half century.
>
>And standing on the sidelines of amateur radio for at least that long.

Poor baby...doesn't realize that amateur radio is a small subset of the larger world of radio. Those in that much larger world tend to look at amateurs as being "in the sidelines."

>btw, "radio and electronics professional" covers a lot of ground.
>Anybody who ever worked in a Radio Shack or circuit City store can
>claim the same thing.

I'm sure you do. :-)

Let's just take a look at who I've worked for (in reverse order): Pinetree (at present), Rockwell International, Teledyne Electronics, Hughes Aircraft Company Missle Division, Communications Technology (contract), RCA Corporation, Electro-Optical Systems (a Xerox subsidiary), Birtcher Instruments, Micro-Radionics Inc. (microwave house), all as an electronics engineer.

Not a single "service" occupation (selling, bookkeeping, accounting, buying, etc.) there.

I don't live in fear of discovery. Why do you?

>> Amateur radio does NOT represent the sum total of all radio
>> communications.
>
>I don't know anyone who claims it does.

I doubt you know anyone working in any radio other than amateur or store selling. :-)

>> It is just a hobby activity, a recreation.
>
>Incorrect.

It isn't a hobby or recreation? Oh, my, then the FCC has classified it wrong.

Amateur radio is not referred to as Public Safety Radio
Service. It isn't Mass Media Radio Service. It isn't anything
else but AMATEUR radio service...i.e., not accepting money
for radio services rendered. It's NOT professional.

>> It is also
>> quite a minor activity in the whole field of radio communications
>> worldwide.
>
>Then why are you, a non-participant and bystander, so obsessed with
>it?

I'm a radio hobbyist. I'm just not licensed in amateur radio.

I'm not "obsessed." :-)

I'm just advocating the elimination of a morse code test for
any US radio license.

Miccollis is obsessed with keeping the morse code test
forever. :-)

>> >Yet you tell us that you know best how amateur
>> >radio should be regulated.
>>
>> No, I present my arguments for a modernization of US amateur
>> radio regulations.
>
>Once in a great while. The rest of the time you behave as described in
>my oft-quoted profile.

Poor baby...engaged in indirect character assassination, are
you? :-)

Character assassination is common among PCTAs when they
can't get their way.

>Your "modernization of US amateur radio regulations" ideas amount to
>these two items, and nothing more:
>
>1) Get rid of the Morse code test
>
>2) Require that all hams be at least 14 years old to get any class of
>license.

Oh, my, you got all that from 14 pages of text in a Comment
to the FCC on NPRM 98-143? Wizard comprehension! :-)

>I think the latter was reduced by you to 12 years.

It was? I didn't know that... :-)

>> As an example, use of morse code as a communications mode
>> IS obsolete. Worldwide.
>

>Only if you define 'obsolete' to mean 'in daily use by many thousands
>of radio operators'. Otherwise, you're flat-out WRONG, Len.

OBSOLETE. The word has two meanings: "1. No longer in
use, 2. Out of date."

FCC doesn't mandate morse code use over and above any other
allocated mode. All allocated modes are optional to all US
amateur licensees. The amateur morse code test IS obsolete
and out of date to the FCC.

Except for Maritime Radio Service in the USA on the great lakes,
morse code isn't needed or required by any other US radio
service. Those have either dropped it or never considered it in
the first place.

The Archaic Radiotelegraphy Society keeps endorsing
morsemanship to keep their living museum of amateurism
going as it once was.

>> It is just not defunct, extinct.
>
>Actually, it's alive and well. And growing. There are probably more
>hams using Morse code today than there were hams back in the 1930s.

Americans have much more time available for leisure pursuits
today than the 72% who were able to keep working during the
Great Depression of the 1930s.

What is Miccollis' obsession with standards and practices of
the 1930s?

>There are more varieties of keys, keyers, paddles, and other Morse
>code related equipment available to hams today than ever before. More
>models of manufactured and kit amateur radio equipment capable of
>Morse code operation available to hams than ever before, too. And at
>lower inflation-adjusted prices! Pretty good for an "obsolete" mode!

Well, then, go and convince the FCC that it should, at all costs,
keep that morse code test for amateurs!

There was no transistor or integrated circuit available in the 1930s.
All of the "automatic" keyers were mechanical and from only a
few vendors.

In the 1930s Bill Halligan was just starting up his radio business
in the Chicago area. National Radio was already established.
I'm not sure on the exact start of Collins Radio but it was at or
about the start of the Great Depression. Heath Company was
not doing anything in electronics...it made airplane parts. Morse
code was king in radio communications for small radio stations
(except broadcasting and the common carrier SSB folks).

In 2003 is there a Hallicrafters still in business? No. Is there a National Radio Co. still in business? No, it got sold a long time ago. Collins Radio is still in business as a division of Rockwell International but quit making amateur radio equipment a long time ago. The Heath Company and Heathkits went kaput from any radio market except reselling wireless door chimes.

There are approximately 135 MILLION cellular telephone subscribers in the USA now. [a cell phone is a little two-way radio] That means at least that many little cell phones, none of which require morse code skills to operate them.

There are more NON-MORSE radios other than cell phones in use today in all other radio services than there ever were US radio amateurs since 1912.

>Here's a bit of history for ya, Len: Back in the '60s, when amateur
>radio equipment manufacturers really began churning out HF
>transceivers, most of those transceivers had minimal Morse code
>performance and features. Some did not even allow Morse code operation
>at all!

Wow, that must have REALLY stung the Archaic Radiotelegraphy Society!!! :-)

>> Other radio services worldwide have either dropped morse code
>> mode communications or never considered it in the beginning of
>> a radio service.
>
>Their goals and resources are different.

Of course. The epitome of US amateur radio is "working DX on HF with CW." :-)

>Are piston-engine propeller-driven airplanes "obsolete"?

This isn't an aircraft newsgroup.

The Wright Flyer would NOT pass any airworthiness inspection today. It was a piston-engine prop plane.

>Are manual transmissions in cars "obsolete"?

This isn't an automotive newsgroup.

Few 1912 automobiles would pass inspection for road worthiness today.

I learned to drive in a manual transmission automobile but that is not related to morse code in any way, shape, or form. Try to stay focussed at least to RADIO.

>Are NTSC-standard television sets "obsolete"?

Not now. Wait until 2010 or shortly thereafter. :-)

US BROADCAST radio never used morse code or required
its use.

>It is illogical to judge what hams do by what other radio services are
>doing.

It is illogical and emotionally immature to demand adherence
to standards and practices in amateurism that came into
being before most US radio amateurs were born.

>> The FCC does not demand use of morse code over and above any
>> other mode by US radio amateurs.
>
>You keep repeating that mantra, but never tell us why it's important.

Tsk, tsk, tsk. Illogical. :-)

FCC doesn't require its use, therefore it is illogical to have a
manual test for it.

The Archaic Radiotelegraphy Society doesn't think in logical
terms. They exist in a fantasy of past times.

>> All allocated modes are
>> optional for use by all US amateur radio licensees, any class, any
>> amateur band.
>
>And you can't use any of them.

Sorry, but I CAN use all the modes allocated to US amateurs.

I just can't do so legally on US amateur radio frequency
allocations. :-)

Actually, I HAVE and legally too...on bands where amateur
use is NOT exclusive.

>> Why does the morse code test remain other than
>> the inertia and lobbying of old-timers at the ITU?
>
>This has been explained to you many, many times. It remains because
>S25.5 requires it, and FCC won't change its interpretation of S25.5.

Incorrect. FCC made the "send by hand" portion of S25.5
optional. There is no option in S25.5 for them to do so.

You've been told that many, many times. Why do you keep
forgetting that? Do you have a current copy of Part 97?

>If you want Element 1 to go away, convince the FCC that they were
>wrong when they wrote the R&O for the 2000 restructuring.

I tried to in Comments on NPRM 98-143. :-)

Do you need a copy of my document? :-)

>> The FCC stated publicly in 1990 and 1999 that it does not consider
>> morse code skill to be of value in the FCC determining whether or
>> not an amateur radio license applicant should be granted a
>> license. The morse code test remains as a requirement for
>> license grants for all license classes having below-30-MHz
>> privileges.
>
>This has been explained to you many, many times. It remains because
>S25.5 requires it, and FCC won't change its interpretation of S25.5.

FCC interprets what it wants to interpret. :-)

FCC still takes an option on S25.5 when no such option exists.

You've been told the reasons and the option MANY MANY TIMES
yet you persist in denying it. Curious. :-)

>If you want Element 1 to go away, convince the FCC that they were
>wrong when they wrote the R&O for the 2000 restructuring.

Why?

>> Morse code testing itself is obsolete.
>
>Just your opinion

You've been told the fact MANY MANY TIMES but you still don't
understand. Can't help your understanding until you return to
the present reality. Remaining in a fantasyland doesn't help
your understanding.

In article <3E7ABC6A.A19C2527@earthlink.net>, Dave Heil <k8mn@earthlink.net>
writes:

>> Heil thinks he is a radio god according to his remarks in here.
>
>Bad call, Len. I've never once written anything about being a god of
>anything. I even corrected Brian when he mistakenly believed me to be
>the greatest DXer in the world.

Heil must have gotten a Dale Carneigie correspondence course
on ebay, noticed that radio gods are supposed to be self-effacing.

Heil is an amateur. Heil is unqualified to talk about law.

Gods are self-qualifying by definition. Since Heil still talks
about radio law without being qualified, ergo, he is a radio god.

It's that simple.

>You don't get much right, do you? I didn't brag. There was no bad
>procedure--only a factual statement about what was used on a government
>circuit.

What was used on a government circuit was BAD PROCEDURE.

It's that simple.

>N2EY: "Besides, here's a simple, plain fact:
>
>No matter what job, educational level, employer, or
>government/military service that a radio amateur has, if said radio
>amateur opposes Mr. Anderson's views, he/she will be the target of Mr.
>Anderson's insults, ridicule, name-calling, factual errors, ethnic
>slurs, excessive emoticons and general infantile behavior."

>Now you have me confused, Len. Are you telling me that your wife IS a
>psychologist?

There is no sense in replying to Heil. He does not accept
replies unless those replies kiss his royal TLC-needing
tuches.

>You aren't writing about the subject matter.

Heil isn't.

>Take my word for it--Google is filled with your rants.

Go and live there. Join your buddy.

>What would you
>know about the need for modernization of something in which you are not
>a participant?

What does Heil know about cooperation and conciliation when
he does neither? :-)

>How does pointing out that you've not taken a single step toward
>obtaining an amateur radio license in the seven years you've posted here
>much less in the several previous decades, turn into character
>assassination.

Radio gods cannot see their arrogance. They are self-defining.
Radio gods are NEVER guilty of anything. They are never
wrong. :-)

>I read it. Nothing in there about any movement on your part toward
>obtaining an amateur radio license.

My advocacy in here was for the purpose of elimination of the
morse code test for any US radio license.

I've never stated any desire to obtain any amateur radio license
except twice...and then in jest.

What I certainly underestimated was the sheer quantity of radio
gods in here! Far more than ancient days of Mount Olympus.
All the morsemen are so Thor they cannot thit.

>Haven't you gotten the word? Morse testing is on the way out.

Morse code testing is stll the LAW. It has NOT gone away.

Dinosaurs don't die decently, they just argue away.

>We still have licensing for children though.

Heil has an amateur license. Heil is a mental child.

>Your latest dilemma is: Do you try to snag that 5 wpm or do you try to
>wait it out?

No dilemma. My advocacy is simply the elimination of a
morse code test for any radio license.

As a mental childlike dinosaur, Heil doesn't understand.

In article <3E7AB2AC.EA5B8C6E@earthlink.net>, Dave Heil <k8mn@earthlink.net>
writes:

>We've been here and done this. No one will come up with a response
>which will please you, a person not involved in amateur radio.

Poor baby, still under delusions of grandeur and god-hood?

Amateur is as amateur does. Heil is an amateur.

Dinosaur Heil seems to think that the only "authority" to discuss
US law is to be licensed in that law.

FCC regulations are law.

Heil has NO qualifications in law to talk about law.

It's as simple as that.

Heil isn't involved in US law.

Ergo, Heil can't talk about it. Heil isn't qualified.

Why is Heil here?

>> Those who love, honor, and worship morse code are fixated on
>> their enobled aptitude and resultant skill. Such do not hesitate
>> to say they are the best in radio because of that single skill...
>> long after morse code became obsolete.
>
>Love, honor and worship? How do you write this stuff without your face
>reddening?

No problem.

Stating a simple fact of observation.

>Now who wrote that the League is an arm of the U.S. government? Nobody
>here wrote anything like that.

Several in here have described ARRL as their "representative"
with "democratic elections."

Go live in Google and go around with buddy Micollis and his
circular logic.

>Are you watching the Sci-Fi Channel again?

No, I'm watching the second Gulf War and seeing a parallel of
old dictatorial morsemen getting theirs just as the Iraqi regime

is getting theirs.

>The ARRL is America's biggest amateur radio membership
>organization. Writing "at best a quarter" is piffle.

ARRL gives out their membership totals periodically. That is
found under the publisher's statement on the QST subpage.

ARRL membership at about a quarter of all licensed US radio
amateurs is FACT.

Dinosaur Heil is still into denial.

>...and you probably wonder why ham radio ops all over the land aren't
>putting up a statue in your honor after all you've done for them.

? Strange statement.

Is Heil thinking about erecting statues for himself? Or just erecting?

>I can't envision amateur radio ever bringing you personal pleasure, Len.
>As a matter of fact, I can't envision you ever taking the first step to
>obtain a license.

Radio god Heil simply cannot envision anyone taking first
steps that His Highness never took.

>You mean like guys who aren't participants in amateur radio who would
>tell us how it should be regulated?

Tsk, tsk, tsk. They do every day. 24/7 in fact. :-)

Those telling you about regulation is the Federal Communications
Commission commissioners and staff.

"...and that's the way it is." :-)

>In other words, you don't have any interest in amateur radio as long as
>there are folks who won't kiss your professional ass?

Tsk, tsk, tsk. Getting more snarly, your Highness? :-)

Is it that your "amateur ass" hasn't gotten any TLC lately?

>*Poof!* That was your rant going up in blue smoke.

Tsk, tsk, tsk. Dinosaur Heil imaging things again.

>The regs have changed numerous times since I was licensed.

Oh, my, a QUALIFICATION! :-)

>They changed again nearly three years ago.

Tsk, tsk, tsk, a more recent change unnoticed. Inattention
to the LAW. No problem, Heil isn't qualified in law.

>My self-esteem is intact.

Tsk, tsk, tsk. Spelled "steam" wrong... :-)

It worked in your case...but in an opposite direction. :-)

DOS Tip: Amateur radio is RADIO.

Hello? Radio works by the same physical principals
regardless of the human designation/laws differentiating
the various radio services.

>> Amateur radio does NOT represent the sum total of all radio
>> communications. It is just a hobby activity, a recreation. It is also
>> quite a minor activity in the whole field of radio communications
>> worldwide.
>
>Right. One in which you are not involved.

Heil is not involved in the larger field of other radio.

Heil once held a title in a non-amateur field of radio but
behaved like an amateur in it.

>> >Yet you tell us that you know best how amateur
>> >radio should be regulated.
>>
>> No, I present my arguments for a modernization of US amateur
>> radio regulations.
>
>Based upon what experience?

A half century of other radio.

Another tip, radio god: Maintenance of the Ancient
Radiotelegraphy Society standards and practices is NO
qualification for telling others about modernization.

Stopping snapping your buggy whip old-timers.

>> As an example, use of morse code as a communications mode
>> IS obsolete. Worldwide. It is just not defunct, extinct.
>
>It is no more obsolete than AM or SSB. All are used currently by radio
>amateurs. Shouldn't matter to you. You aren't involved.

Morse code communications mode IS obsolete.

It just isn't extinct yet.

Dinosaur Heil is still into denial.

His world is ending. Slowly but inexorably.

>Sure sounds like you're talking about the elimination of a mode rather
>than the elimination of testing for a mode. It really doesn't matter
>what other services use or don't use. Radio amateurs worldwide use
>morse every day.

Circular logic, like Micollis.

Are you two going around together? :-)

>> The FCC does not demand use of morse code over and above any
>> other mode by US radio amateurs. All allocated modes are
>> optional for use by all US amateur radio licensees, any class, any

>> the inertia and lobbying of old-timers at the ITU?
>
>We've been here and done this. No one will come up with a response
>which will please you, a person not involved in amateur radio.

Dinosaur Heil, intolerant of inferior beings, cannot understand
a changing radio world. That is the doom of his radio existance.

>Noooooooo, that isn't all you do. Would you like to fess up or would you
>prefer to be Googled?

Copying the entirety of Google will not erase or change anything.

Stay with the current program.

There is nothing to "confess," Dinosaur Heil.

Morse code communications mode is OBSOLETE.

Morse code is NOT mandated by the FCC over and above
any other allocated mode by any US radio amateur licensee.

The FCC morse code test is OBSOLETE.

Old-time morsemen are the dinosaurs of the radio world.
They will die out. Goodbye pterodactyl, you never flew
well when you did all that flapping.

>Steve, a couple of fifty-cent words doesn't release you from your
>obsessive/compulsive behavior

If you insist, Brain.

I am curious as to YOUR credentials in psychology and psychiatry, too,
Brain.

>And you do humiliate, criticize and denigrate hams and non-hams alike
>for sport and recreation

Not really. No more than they insist on being vulgar or obnoxious.

>Bragging about how "easy" we make it should
>tell you something about yourself.

It's not "bragging" if it's fact, Brain. And all it tells me is that you
make it too easy to do.

Now...other than the Navy-Marine Corps thing with Hans or the free use of
dope with Cecil, I'd have a hard time "discrediting" them. They ahve opinions I
don't always like, but neither do they lie or make up outrageous stories that
are unsubstantiated or supported by facts.

You, on the other hand, seem to fall easy prey to such stories by Lennie,
Vippy, et al.

>For example, "cruel" comes to mind.

Why? Because you are unprepared to support your assertions in public and
make it easy to deride you for it? That's your fault, not mine, Brain.

>Best of luck to you.

No luck needed as long as you keep going the way you are. It's like
fishing with fragmentation grenades.

Steve

>>"Exaggerated spin"? Where? Show us where an ARRL document was
>>exaggerated.
>
> It's all in Google. Go back to your newsgroup homeland there.

I have. I cannot find any ARRL article in any media where the information
they presented was not supported by facts.

>>The fact is that you dismiss the idea that radio amateurs play ANY
>>communications role in emergencies of any size or scope.
>
> Incorrect.

You're lying, Lennie...

>>Well, there you have it. All a person has to do is disagree with you,
>>and out come the insults.
>
> Poor baby...knows morse and feels that entitles him to insult
> those who don't support morse testing.

So far all we have have seen in the Lennie-vs-N2EY confrontation is Jim
present facts and opinions based upon experience, and Lennie has presented such
argument as calling Jim's comments "sermons", calling him the "Pendantic
Parson", and otehrwise NOT provide ANY rebuttal of any meaningful nature.

>Tsk, tsk, tsk.

You said it, Lennie. You ARE pitiful.

> Incorrect. ARRL practices a form of fraud common to bunco
> artists and confidence men. They also charge heavily for
> shipping on items purchased directly from Newington.

More accusations of unsubstantiated fraud.

And I also make frequent use of mail order texts in my profession. What
ARRL charges for "shipping and handling" is far exceeded by countless other
publishers.

>>News flash: There's been an amateur radio license available in the USA
>>with no code test for more than 12 years. Full privileges license with
>>only a 5 wpm code test for almost 3 years.

Bigger news flash: Despite insistence on awareness of FCC regulations
since 1956, Anderson still demonstrates ignorance of them. So what's that say
for "professional radio" men?

>There is no NEED for Morse code testing.

Sure there is. There's a continuing administrative and regulatory
requirement for testing. 47CFR97 refers.

>It may be good to learn to communicate
>to others that use Morse code, but it is NOT essential.

It is if you want an Amateur Radio license with HF privleges in the United
States, Vippy. At least until WRC-03 is over and the appropriate regulations
have been ammended.

Sure there is, Lennie. Just answer a simple question: Does Mrs Lennie posses a license to practice as a psychologist in ANY state of the union? Yes or no will suffice.

Lack of response, either affirmative or negative, will be interpreted as yet another LennieLie.

>I would like more EEs or people interested in electronics in Ham radio. If an
>EE goes to a Ham meeting, and see what Ham radio is all about, then often
>they
>would be not be interested in Ham radio

How do you know this? Upon which poll or study to you base your assertion
that EE's attending an Amateur Radio meeting would NOT be interested in Amateur
Radio? Or is this JUST your OPINION?

>Real EEs don't <Morse> code.

OH...?!?!

I worked for a short time in an R&D firm in Atlanta. There were fourteen
Amateurs in the company, all but two (myself being one) who were NOT EE's.
Seven of the twelve were regular CW operators, and then other five used it in
some capacity, including the operation of beacons, EME and meteor scatter
experiments.

(BTW: all of them were BSEE or MSEE's. No associate degrees present
except mine, and again, I was not an EE)

>What is the chance of an experimenter's club gaining such resources? Would
>such
>an organization be approved to be an "ARRL affiliated" club>

Only if they apply for it, Vippy!

>>Now...still on the thread, what actions will YOU take in order to help put
>>the advantages of Amature Radio in front of kids and new licensees,
>>Vipul.
>
>I'm in limbo now.

There's the understatement of the year!

>I cannot take action until a certain "situation" is
>resolved.

Bull.

You have MORE than enough time to spread your unfounded bile in this NG,
Vipul, you can be spending SOME of that time soliciting other like-minded

individuals to join you.

>Perhaps this will change soon.

I doubt it. You do not impress me as a "solutions" kind of guy.

>Most likely amateur radio will be just
>a diversion, so I just don't care anymore.

You obviously care enough to come in here and rec.radio.cnd make up stories and be insulting.

>This may sound bad, but if I get
>something, I can give back.

And vice versa...That's why you are getting this spoon fed back to you, Vippy. Getting the hint yet?

Steve, K4YZ

Heck, I know some EEs and some ASEEs as well as BSETs with tickets. I have a serious doubt by many of your posts that you seriously care about any of the tests other than you perceive them as 'hard'. I don't care about Morse one way or the other ... the next thing, I suspect a lot of folks will be whining about the theory. If you even possess algebra and trig you know how easy the tests are. BTW, ...ummmm... Scott, interogative, WTF? Snip a cap here and add a jumper there ... I doubt that adds too much to the book of knowledge, right?

On or off the volleyball court?

> Neither skill is more important in society, but this is a technical hobby.

This society, as a whole, doesn't give a hoot about volleyball players
or radio amateurs.

> >> Note this is NOT a radio or electronics skill.

> >The only place I've used morse is on the radio.
>
> It is translating sounds into characters. This is not an electronics skill.

I did not respond that I believed morse code to be an electronics skill.
It can certainly be a radio skill. As I said, I've never used morse
other than on the radio.

> > I guess everything where people bond
> >together in a joint interest looks like a cult to someone who sees

Why should mannerisms and traditions bother you?

> Even Hams know this, thats why they say certain things are "true" Ham > activities.

I don't know any radio amateurs who say anything like that.

> Here are some examples of cult activity. Excessive jargons, hatred of > CB, Morse code,
Wouff Hong (okay - cheap shot).

I'm going to guess that you really have no idea of what takes place at a
Wouff Hong ceremony. I'm also going to guess that you didn't mean to
imply hatred of CB, hatred of morse code and hatred of Wouff Hong.
Just how much jargon is considered excessive and who gets to be the
judge?

> >> Those occasional useful
> >> aspects then benefit you.

> >
> >How do you know?
>
> Hard to justify going to a Hamfest or Ham meeting.

I don't know how they do things where you live. I usually announce that
I plan to attend a hamfest or a club meeting. Then I go to the hamfest
or club meeting. Why do I need to justify going? Have you given
control of your daily life to some sort of family cult?

> There must be a useful topic
> (to other, not me) scheduled to justify going to a Ham meeting.

I feel no such need to have a "useful" topic. I mostly go for the
socializing with others who have similar interests. We might munch on
donuts and drink coffee. We swap stories. We have a short business
meeting. We may have a program. We may not. We may even have a program
which is of no interest to me whatever. I sit through it politely. At
no point in any such meeting do I raise my hand and announce that I
believe the club setup is all wrong or that the club's raison d'etre
must be do design or build more projects. Nobody else does that either.

Who knows? Vipul certainly has a much, much better command of English.

Today is March 22. Just 11 days to go until ol' Masa has to make good on his promise of April 2, 1998. You know, the one where he promised to do something special if the number of hams was greater on April 2, 2003 than it was on April 2, 1998.

>>of radio operators'. Otherwise, you're flat-out WRONG, Len.
>
> OBSOLETE. The word has two meanings: "1. No longer in
> use, 2. Out of date."

Neither of which fits Morse code as a communications mode on the amateur bands.
So you are flat out wrong, Len.
>
> FCC doesn't mandate morse code use over and above any other
> allocated mode. All allocated modes are optional to all US

> amateur licensees. The amateur morse code test IS obsolete
> and out of date to the FCC.
>
First you said the mode was obsolete, now it's the test. Backpedaling.

> Except for Maritime Radio Service in the USA on the great lakes,
> morse code isn't needed or required by any other US radio
> service.

So? This isn't a maritime newsgroup. Do try to stay focused.

> The Archaic Radiotelegraphy Society keeps endorsing
> morsemanship to keep their living museum of amateurism
> going as it once was.

Now who would you be referring to?
>
>>> It is just not defunct, extinct.
>>
>>Actually, it's alive and well. And growing. There are probably more
>>hams using Morse code today than there were hams back in the 1930s.
>
> Americans have much more time available for leisure pursuits
> today than the 72% who were able to keep working during the
> Great Depression of the 1930s.

How do you know? Were you employed during theGreat Depression of the 1930s?
>
> What is Miccollis' obsession with standards and practices of
> the 1930s?

Who is "Miccollis"?
>
>>There are more varieties of keys, keyers, paddles, and other Morse
>>code related equipment available to hams today than ever before. More
>>models of manufactured and kit amateur radio equipment capable of
>>Morse code operation available to hams than ever before, too. And at
>>lower inflation-adjusted prices! Pretty good for an "obsolete" mode!
>
> Well, then, go and convince the FCC that it should, at all costs,
> keep that morse code test for amateurs!

First you said the mode was obsolete, now it's the test. Backpedaling.
>
> There was no transistor or integrated circuit available in the 1930s.
> All of the "automatic" keyers were mechanical and from only a
> few vendors.

And the significance of this is?
>
> In the 1930s Bill Halligan was just starting up his radio business
> in the Chicago area. National Radio was already established.
> I'm not sure on the exact start of Collins Radio but it was at or

> about the start of the Great Depression. Heath Company was
> not doing anything in electronics...it made airplane parts.

Don't forget Hammarlund, and Petersen, and a bunch of other manufacturers. Like
Vibroplex, which is still in business today, making ....telegraph keys!

And the significance of this is?

> Morse
> code was king in radio communications for small radio stations
> (except broadcasting and the common carrier SSB folks).

Hams were using AM and SSB. Broadcasting was using AM and FM.

What's your point?
>
> In 2003 is there a Hallicrafters still in business? No. Is there a
> National Radio Co. still in business? No, it got sold a long time
> ago. Collins Radio is still in business as a division of Rockwell
> International but quit making amateur radio equipment a long
> time ago. The Heath Company and Heathkits went kaput from
> any radio market except reselling wireless door chimes.

Instead, we have Yaesu, Kenwood, Icom, Ten-Tec, Alinco, MFJ and its many
subsidiaries, Alpha, and a whole bunch of small companies like Elecraft,
Wilderness and Red Hot Radio.

What's your point?
>
> There are approximately 135 MILLION cellular telephone
> subscribers in the USA now. [a cell phone is a little two-way
> radio] That means at least that many little cell phones, none
> of which require morse code skills to operate them.

So? No morse code test for all amateur privileges on VHF/UHF. Cell phones
operate on UHF.

This is not a cellphone newsgroup.
>
> There are more NON-MORSE radios other than cell phones
> in use today in all other radio services than there ever were
> US radio amateurs since 1912.

So? This is not a newgroup for "other radio services".
>
>>Here's a bit of history for ya, Len: Back in the '60s, when amateur
>>radio equipment manufacturers really began churning out HF
>>transceivers, most of those transceivers had minimal Morse code
>>performance and features. Some did not even allow Morse code operation
>>at all!
>
> Wow, that must have REALLY stung the Archaic Radiotelegraphy

>
Who?

>>> Other radio services worldwide have either dropped morse code
>>> mode communications or never considered it in the beginning of
>>> a radio service.
>>
>>Their goals and resources are different.
>
> Of course. The epitome of US amateur radio is "working DX
> on HF with CW." :-)

Only according to you.
>
>>It is illogical to judge what hams do by what other radio services are
>>doing.
>
> It is illogical and emotionally immature to demand adherence
> to standards and practices in amateurism that came into
> being before most US radio amateurs were born.

IOW, "old" = "bad". Guess what, Len - you're old.
>
>>> The FCC does not demand use of morse code over and above any
>>> other mode by US radio amateurs.
>>
>>You keep repeating that mantra, but never tell us why it's important.
>
> Tsk, tsk, tsk. Illogical. :-)

Yes, your statements are often illogical ;-)
>
> FCC doesn't require its use, therefore it is illogical to have a
> manual test for it.

FCC doesn't require radio amateurs to build their radio equipment, either, or
even understand how it works. So, by your reasoning, it is illogical to have a
written test for radio theory beyond that necessary to understand the rules.

FCC thinks that the 35 question written test now required for Technician is
adequate proof of qualification for hams to design, build, adjust, repair,
align and operate radio transmitters on all authorized amateur modes and
frequencies above 30 MHz. At power levles up to 1500 W. Therefore, by your
reasoning,
it is illogical for the General and Extra written tests to contain any radio
theory other than HF/MF propagation.
>
>>> Why does the morse code test remain other than
>>> the inertia and lobbying of old-timers at the ITU?
>>
>>This has been explained to you many, many times. It remains because
>>S25.5 requires it, and FCC won't change its interpretation of S25.5.

>
> Incorrect. FCC made the "send by hand" portion of S25.5
> optional. There is no option in S25.5 for them to do so.

That was over 20 years ago.

FCC has said they won't change their current interpretation of S25.5. Read the
R&O.

>>If you want Element 1 to go away, convince the FCC that they were
>>wrong when they wrote the R&O for the 2000 restructuring.
>
> I tried to in Comments on NPRM 98-143. :-)

You failed. Poor baby ;-)
>
> Do you need a copy of my document? :-)

No thanks, we have plenty of bathroom tissue in this house ;-)

>>If you want Element 1 to go away, convince the FCC that they were
>>wrong when they wrote the R&O for the 2000 restructuring.
>
> Why?

Because FCC makes the rules.

**

AMERICA AT WAR: HAM RADIO PREPARES

America's terror threat level has again been raised to "Code Orange." This in the wake of President Bush’s ultimatum to Iraqui dictator Saddam Hussein. And with our nation on high alert for terrorist attacks, Homeland Security Secretary Tom Ridge outlined a national plan Tuesday March 18th. One that he said would increase America's at-home defenses. Part of it is in the area of personal communications. Amateur Radio Newsline’s Norm Seeley, KI7UP, has the latest on this and the way ham radio can be prepared:

--

The plan, which Homeland Security Secretary Tom Ridge has named Operation Liberty Shield heightens security at the nation's borders, airports, seaports and railways. It also provides additional security at nuclear and chemical plans along with protecting elements of the nation's food supply and distribution system.

As you have probably heard in other n ews reports, vehicles are again will be subject to random inspections on roads leading into and out of airports, sea-ports and similar facilities. Most of those who will making inspection stops are probably unaware of ham radio equipment and why hams have it in their cars. Akll they will sdee is a different kind of radio that they have never experienced before. So, for the forseeable future Amateur Radio operators would be well advised to carry a copy of their license with them if they are driving a vehicle equiped with an antenna array anyplace close to a high security area. Its much simpler to show you ham ticket to the inspector than to try to explain the hobby while a long line of cars behibd you are honking their horns.

Also suggested by Holeland Security is for every family put in place an emergency communication plan. This plan should be specific to a given family unit, understood by all of its members and practiced regularly.

Some experts have recommended that a family communications plan not be totally dependant on land based or cvellular telephones that can easily become overloaded in an emergency. Recommended are forms of personal radio including FRS and the new M.U.R.S. service. Families where all members are licensed radio amateurs have a definite advantage here. If your wife and kids are not yet hams, now might be a hood time to make getting them all tickets as a super high priority. Three places on the web you can find training information are www.arrl.org, www.w5yi.org and www.gordonwestradioschool.com. And gordonwestradioschool is one word.

Radio amateurs involved in civil defense and disaster preparedness should now be on high alert as well. Radio gear should be in tip-top shape, tested daily and H-T batteries should be maintained at full charge. Do the same spare battery sets. Also, have one or more sets of alkaline cells ready to go. If the power goes out you will have no way to quickly recharge your NiCad or NiMH packs.

If you belong to an emergency service group like ARES or RACES, make sure your leaders know how to contact you 24 hours a day, 7 days a week. Take part in regular any scheduled on-the-air drills so that you will be knife-edge sharp if your services are needed.

And if you have never had Emergency Communications training, don’t wait. The ARRL is the only national Amateur Radio group certified to provide you with the schooling you need and courses are available right now. As soon as this newscast is over we urge you to go to the League’s website at www.arrl.org and to sign up.

Meantime, the American Red Cross is urging families and individuals across the nation to make appropriate preparations. The relief agency suggests everyone follow the Red Cross Recommendations for the Homeland Security Advisory System. It’s on the web at www.redcross.org.

For the Amateur Radio Newsline, I’m Norm Seely, KI7UP, reporting.

--

We will have more on ham radio and its part in defending America against the threat of terrorism in future Amateur Radio Newsline reports. (ARNewsline™)

**

AMERICA AT WAR: PROTECTING THE NATIONS COMMUNICATIONS

With war now reality and the possibility of terrorism, leaders from the telecommunications, Internet Service Provider, satellite and cable industries have begun consideration of widespread recommendations to help restore communications services in the event of an attack on the nation’s communications infrastructure. Some of the recommendations were presented by members of the Network Reliability and Interoperability Council at its quarterly meeting March 14th at the FCC.

In developing what the group calls its best practices for service continuity and disaster recovery, the industry representatives identified and analyzed more than 200 such concepts. These cover a wide range of scenarios. And for the first time in the area of cyber security the communications industry has conducted a thorough assessment and analysis of its vulnerabilities.

The 56-member council vote on which recommendations to put in place will be completed on March 28th. (Published news reports)

**

HAM RADIO IN SPACE: ARISS TO CONTINUE WHILE SHUTTLES ARE GROUNDED

The grounding of America's Space Shuttles following the February 1st Columbia disaster has not had any major impact on Amateur Radio. Roy Neal, K6DUE, brings us up to date on whats happening in the shuttle program and with manned ham radio in space:

--

The announcements by NASA that its having Boeing build a new Orbital Space Plane and that it hopes to have the remaining Space Shuttles back in the sky by this fall signal a turning point for the space agency. It is telling the world that things are getting back on track.

But in there here and now there are still several months before full space operations resume. Amateur Radio on the International Space Station Chairman Frank Bauer, KA3HDO, says that ARISS is prepared for any eventuality.

According to Bauer, until the shuttles fly there will be less scientific work taking place on the International Space Station. This is because of the reduced on-orbit staffing of two member crews.

Bauer believes the most probable scenario for a crew change will be what we reported two weeks ago. That U-S Astronaut Ed Lu, KC5WKK and Russian Cosmonaut Yuri Malenchenko will fly to the I-S-S on a Soyuz rocket to become the Expedition 7 crew. But Bauer adds that Astronaut Mike Foale, KB5UAC, is a back-up for the crew -- also in training -- just in case he is needed. He also notes that Astronaut Pedro Duque, KC5RGG, who planned to use the ARISS equipment on the upcoming Soyuz transport flight, will now probably fly in the fall.

Baueer says that the only major setback for ham radio so far concerns upgrading the I-S-S ham station itself. According to KA3HDO, with the shuttles not flying, consumables like food and water are the highest priority items to be launched on the upcoming Progress re-supply missions. This means that the ARISS hardware that was planned to be flown this year will probably be delayed. The gear waiting for transport includes the Slow Scan Television equipment, plus Kenwood D700 and Yeasu FT-100 radios and the Naval Academy's P C Sat 2 ham satellite. Bauer says that this equipment will be kept ready for any upcoming transport flight opportunities to the I-S-S.

The good news: Bauer says that the opportunities for school contacts will remain at the same. Look for them at a rate of at least two a week. Maybe more if the Expedition 7 crew finds itself with extra free time.

Right now, it appears as if ARISS operation from the I-S-S will continue on as it has since operations resumed. This, as investigators on the ground work to determine what caused the Columbia to disintegrate as it attempted to land last month and get ready to return the rest of the shuttle fleet to service later this year.

For the Amateur Radio Newsline, I’m Roy Neal, K6DUE.

--

The only item not touched on by Bauer was open contacts with the ham radio public. These tend to occurr only when the crew has some unscheduled free time. (ARISS)

RESCUE RADIO: UK RADIO CLUB FIRE

Back on Earth, a radio club meeting is interupted by a fire. It happened in the U-K and Jeramy Boot, G4NJH, joins us from Nottingham Englanmd with the details:

--

The Bredhurst Receiving and Transmitting Society's quiz night on the 6th of March was interrupted by what all members present assumed to be a power cut. However, club member Terry Wheeler, G7MIM, went out to investigate and discovered that a fire had broken out in the room above the club. He calmly asked the members to leave the premises and the evacuation of the building took place in a swift, orderly and calm manner. Richard, G7PPE, tried to open the door of the flat above the club room where the fire had started as the occupant was still inside, but was unable to break down the door. Fire crews arrived in a matter of minutes and the occupant was rescued and taken to hospital. Jeramy Boot, G4NJH.

--

Jean Darley, G1DLL, the Secretary of the Bredhurst Receiving and Transmitting Society says -- and we quote: "It's never a dull moment if you're a member of our radio society." G1DLL is also now trying to find an alternative venue for the club to meet. (GB2RS)

**

RADIO LAW: ANTENNA PROTECTION - CALIFORNIA TRIES AGAIN

If at first you don’t succeed, try again. And that’s exactly what hams in California are doing as they try to convince the state legislature and the governor that its time to offer protection for their antennas and towers. Amateur Radio Newsline’s Bruce Tennant, K6PZW has more:

--
March 26th is the date for a legislative hearing on California's latest attempt to pass an Amateur Radio antenna protection bill. The ARRL Letter says that Assembly Bill 1228 was introduced February 21st by Assemblyman Bob Dutton. It has been referred to the Committee on Local Government for consideration.

ARRL Pacific Division Director Bob Vallio, W6RGG, and the League’s antenna expert Dean Straw, N6BV, are among those scheduled to testify on behalf of AB 1228. Several others also plan to attend.

Back in 2000, the California Legislature passed a bill incorporating the essence of PRB-1, but Governor Gray Davis vetoed the measure. At that time the Governor said his opposition stemmed from a lack of budgetary funds to complete the required studies and his personal belief that amateur antennas should be considered a local rather than a state issue. The earlier California measure had carried a price tag of between $70,000 and $100,000 to fund studies and a model ordinance that lawmakers required.

Organizers behind the current bill say the new measure, being called "The Emergency Communications Enhancement Act," will not carry any price tag. A copy of the current legislative proposal is available on-line the California State Legislature web site.

For the Amateur Radio Newsline, I’m Bruce Tennant, K6PZW, in Los Angeles.

--

So far, 16 states have incorporated the essence of PRB-1 into their laws or have approved Amateur Radio antenna legislation that includes minimum regulatory heights for antenna structures. (ARRL)

**

RADIO LAW: CALIFORNIA WORKING TO MOBILE CELL PHONE BAN

Still in the Golden State, a bill requiring cell phone users to use handsfree devices while driving has been adopted by a powerful California Assembly committee. Bill Pasternak, WA6ITF, has been following the story and has the latest developments:

--

The measure passed the California Assembly Transportation Committee on a 14 to 5 vote on Monday March 10th. This, after falling a single vote short of passage for the past two legislative sessions.

The bill's author is Assemblyman Joe Simitian, of Palo Alto. He has called the committee's approval the first step to saving lives on California roads and highways.

Under the Simitian's bill a first offense for using a cell phone while driving a motor vehicle would result in a mandatory $20 fine. Subsequent violations would carry a maximum fine of $50. Drivers could use handsfree cell phones without threat of a penalty.

The measure is exclusive to mobile cellular telephone use. It reportedly excludes all other forms of two-way radio communications. The bill now heads to the state Appropriations Committee for further hearings.

Reporting from near the city of Valencia California, I'm Bill Pasternak, WA6ITF, for the Amateur Radio Newsline.

--

If the measure eventually becomes law, California will become the second state to require handsfree use of cell phones by drivers. New York was the first back in 2001. (ARNewsline™ from various reports and sources.)

**

ENFORCEMENT: FCC ALLEGES NUMEROUS VIOLATIONS ONB MICHIGAN REPEATER

A pair of Michigan repeater operators have been told to cease operating their systems under automatic control. This, as the FCC launches an investigation into charges of several rules violations. The agency's Daryl Duckworth, NN0W, has more;

--

Duckworth: "The Detroit District Director issued an order to cease autonmatic control of Amateur repeater station K5YHA to Sheri Gilbert and an order to cease automatic control of Amateur repeater station K5EKP to William Gilbert, both of Lupton Michigan. Both stations are under review by the Enforcerment Bureau for apparent violations of the Commissions rules inccluding inadaquite station control and deliberate interference."

--

In a letter February 24th letter to the Gilberts, FCC Special Counsel Riley Hollingsworth alleges that numerous rule violations have taken place on the repeater. Also that the repeater is the source of interference to the K8GER system. He said that Violations on the repeater consisted of failure to identify by some users, use of false or misleading call signs by users and failure to have a control operator for the repeater. Hollingsworth alleges that back in January the Gilberts' apparently turned the operation of the repeater over to a car rally. During that time several of these type of rule violations occurred for more than 12 hours during a two-day period.

The letters warns the Gilberts' that that if they are unwilling or unable to prevent violations on their repeater, then their Amateur operator and station licenses will be subject to enforcement action by the Commission. This could include a fine, operator license suspension or station license revocation. The Gilbert's have since informed the FCC that the repeater has been taken off the air. (FCC)

**

AT THE FCC: NOW WE HAVE COALS

The acronym laden Federal Communications Commission has added COALS to its dictionary. This, as the regulatory agency begins implementation of the Cable Operations and Licensing System by Report and Order on March 13th.

With COALS the FCC has expanded its electronic filing capabilities to make it easier for multichannel video programming distributors to submit applications, reports, and other documents. The FCC says that COALS also makes license and cable operational information more accessible to FCC staff. This in turn makes for more efficiency in monitoring spectrum usage and competitive conditions in the cable and multichannel video marketplace. The FCC adds that the introduction of COALS represents more progress in the FCC’s own modernization initiative. (FCC)

**

RADIO RULES: MEDIA OWNERSHIP HEARINGS

It looks like there will be more public hearings on media ownership restrictions. A Democrat on the Federal Communications Commission plans to hold two more hearings, sidestepping the wishes of the agency's Republican chairman.

Commissioner Michael Copps says he will hold hearings at the University of Washington in Seattle and Duke University in Durham, North Carolina. Copps is seeking public input on the F-C-C's review of whether decades-old media ownership restrictions are appropriate in a market altered by the growth of the Internet, satellite boadcasting and cable television.

FCC chairman Michael Powell had previously said that the hearing he held in Richmond, Virginia, on February 27th is all that's needed. Powell said that the agency has received 13 thousand comments from the public, most filed electronically. (FCC)

**

HAM RADIO CUDOS: PAUL HARVEY HONORS HAMS

Radio commentator Paul Harvey dchose Wednesday, March 19th to honor ham radio. In his broadcast, Harvey described radio amateurs as America's quiet warriors. He said that there are 700,000 of them who are unpaid, uncelebrated, civilian, radio operators, who are there during and after floods, fires and tornadoes. And says Harvey, after the 911 attack hams were indispensable in reuniting families.

It was a very unexpected salute to the nations ham radio community. You can find it on the web at www.paulharvey.com. Look for the show dated March 19th. (W6RCL)

**

CHANGING OF THE GUARD: MARC TONNA, F9FT, - SK

A pioneer in antenna design has passed on. According to a notice on thew A.F.T. antenna wwebsite, company founder Marc Tonna, F9FT died on March 2nd at the age of 91.

Way back in 1946, Marc Tonna revisited the design described by the Japanese searchers Yagi and Uda in 1926. Tonna brought to the Yagi improvements that made his antennas famous among the radio-amateurs, as well as in the field of the then uprising commercial TV. He later went on to become the co-founder of the company Antennes Tonna which today is known as A.F.T.. (AFT)

NAMES IN THE NEWS: NEW ARKANSAS SM

Dennis Schaefer, W5RZ, has been appointed as the new Arkansas ARRL Section Manager. He succeeds Bob Ideker, WB5VUH, who first served as Section Manager from 1991 through 1995 and who returned to office in 2001.

And heres where it become rather uinteresting. Ideker had decided to not run for another term. Eldon Bryant, K7ZQR, was elected to replace him. But Bryant later decided not to assume the office and Schaefer was named as his replacement.

Schaefer’s term begins on April 1st. Arkansas ARRL members -- or anyone elser can contact him by e-mail to w5rz@arrl.org (ARRL)

EMERGING TECHNOLOGY: CALL IT MC INTERNET

Hungry? You may soon get a surprising bonus when you dine at the Golden Arches. This, with word that McDonald's restaurants in three U.S. cities will be offering one hour of free high-speed Internet access to anyone who buys a promotional meal.

Ten McDonald's in Manhattan New York began offering wireless WiFi, or 802.11b, Internet access on Wednesday, Matrch 12th. By the end of 2003 McDonald's plans to extend the access to 300 restaurant locations in New York City, Chicago and a yet to be announced California city. Window signs will alert customers to which restaurants have WiFi wireless access. After using the hour of free access that comes with a meal, customers can pay $3 for another hour online or get more time by purchasing another extra value meal

Besides McDonald's, Internet surfers will also be able to tote their laptops to 400 U.S. Borders book stores, hundreds of hotels and a pair of U.S. airports

where WiFi access will be available this summer. (Published news reports)

SPACE AND SCIENCE: MORE ON SETI@HOME

Last week Amater Radio Newsline’s Henry Feinberg, K2SSQ, brought you the latest news on a project called seti@home. Henry is back this week with some background on the project and how it got stasrted:

--
SETI@home first offered its screensaver to the world in May of 1999 as the first example of wide-scale distributed computing. Its aim was to link idle computers through the Internet to tackle large computational problem involved in searching for intelligent signals from space.

The key to its success was the collaboration between two people who would become the principal architects of the project. David Anderson is a computer scientist who was one of the principal developers of distributed computing. Dan Werthimer is a physicist with two decades of experience collecting radio data and parsing it in search of unusual signals from space. Together, they have drawn in not only the computer community, but many others as well. This includes thousands of ham radio operators interested in offering use of their spare computer time to benefit worthwhile projects.

Werthimer, who serves as chief scientist for SETI@home has conducted his own Search for Extraterrestrial Intelligence for the past 24 years. For 11 of those years he has been able to use the giant 1,000 foot diameter radiotelescope at Arecibo Puerto Rico to look again at promising locations and frequency ranges. This, to determine if a strong radio signal is more than random noise or a transmission from an orbiting satellite.

So far no luck but Werthimer is not disappointed. This is because SETI@home has mobilized so much more computing power than has ever before been thrown at signal analysis. Also, the team has been able to perform much more detailed and complicated computations on the radio data than now possible with Werthimer's own ongoing SETI project, called Search for Extraterrestrial Radio Emissions from Nearby Developed Intelligent Populations. Thats SERENDIP IV for short.

What is important is that SETI@home has performed the most sensitive and detailed SETI sky survey to date. It has also demonstrated the power of the Internet for doing scientific distributed computing, and has allowed the general public -- and the ham radio communuity to participate directly in an exciting research project.

And the success of SETI@home has also spawned numerous other distributed computing projects. These include Folding@home -- a distributed computing project to calculate the three-dimensional structure of proteins and climateprediction.net to improve scientific forecasts of 21st century climate. And scientists say that there is more to come.

For the Amateur Radio Newsline, I’m Henry Feinberg, K2SSQ.

--

So far, 4,287,000-plus users have lent thir spare computing time to analyze radio data for the SETI@home team. You can become a part of the project by taking your web browser over to http://setiathome.ssl.berkeley.edu. And if you missed that U-R-L you will find it in the print edition of this weeks amateur Radio Newsline report. (W6RCL, Published Reports)

**

DX

In D-X, word that A35KB has gone QRT -- probably for good! Paul Kidd, A35RK, told the Ohio Penn D-X newsletter that he hasn't heard Father Kevin Burke, A35KB, on the air for some time. So, last week telephoned Father Kevin only to learn that he is very busy with his duties as parish priest on the Island of Eua. Because of this, he is no longer able to operate on the radio, has allowed his license to expire, his station is dismantled, he has no intention of getting back on the air any time soon. Nor can he any longer respond to QSL requests. (OPDX)

On a brighter note for D-X’ers, the OPDX also reports that SP9FIH will be active from Tonga through April 14th. He already has verbal permission to operate and his license will be given to him after arrival on the island. Activity will be SSB on 80 through 10 meters including the WARC Bands. QSL to P.O. Box 480, 44-100 Gliwice, Poland. (OPDX)

And lastly word that Meanguera Island in the Fonseca Gulf will ba activated by DL7IQ, DL7IO and YS1CF from march 27th to the 28th as HU1M. Modes used will be SSB, CW, SSTV and RTTY. On the 29th and 30th the same call letters will be from San Diego Beach El Salvador. Full information is on the web at www.dl7io.de. (The’ Modern DX’er)

**

THAT FINAL ITEM: SWLFEST 2003

And finally this week, hams are not the only radio hobbiests who get together at conventions. Shortwave listeners recently had a major get-together in Pennsylvania that saw guests and presenters from around the world. Steve Coletti of WBCQ was among them and has this in-depth report on SWL Winterfest 2003:

--

The listening side of the radio hobby made its 16th pilgrimage through the snow to the little town of Kulpsville, PA., for the annual SWL Winterfest hosted by NASWA. Although SWL stands for short wave listeners, the fest activities cover DC to daylight as again there were the usual demonstrations of overseas TV via satellite, the activities of the group who we affectionately call the "Scanner Scum", and a demonstration of DRM, the European digital shortwave broadcast standard by Jan Peter Werkman of Radio Netherlands, James Briggs of Merlin Communications and Kim Elliot, KD9XB, of the Voice Of America with additional help of a PC loaned by attendee Eric Cottrell, WB1HBU, to decode the broadcasts beamed specifically to Kulpsville.

This year, Bill Whitacre of the International Broadcast Bureau, parent of the VOA and other US international broadcast ventures, was able to schedule it's annual meeting of radio monitors to coincide with the Winerfest and 26 professional listeners from around the world joined the crowd in Kulpsville to explain that their job was more than just making sure that the signal was heard in the target area.

Although the Fest has been a listener only event, over one third of the attendees every year are hams and this year new ground was broken as Skip Arey, N2EI, ran an introduction to Ham Radio forum. Not only the first time for this discussion, but it was also one of two first time evening forums held on Friday night.

The international broadcasters were represented this year by Adventist World Radio and Radio Free Asia in the forums as well as live broadcasts over WBCQ. In addition to some regularly scheduled programming that went remote on Friday night, WBCQ had a Saturday marathon broadcast by the station's engineering magician, "Tim Tron" Smith, WA1HLR.

Other forums featured reports on listening tips, a summation of a DXpedition to Australia, and a report on overseas SWL group, the European DX Council's annual meeting.

Last year, Bob Zenotti, HB9ASQ, co-host of the now gone Shortwave Merry-Go-Round on Swiss Radio International made his first appearance at the fest as a guest speaker. This year he came on his own as regular attendee.

--

Zenotti: “This is one of the best ones I can remember. Great bunch of people, fantastic discussions, and a lot of excitement here….and very little sleep.”

--

The fest was not without it's humor. The hotel has the Stockholm, Copenhagen, and Oslo meeting rooms. In honor of the delegation from Finland that attends every year, the hosts of the event, Richard Cuff and John Figliosi, unofficially named the fest's hospitality suite, the Helsinki room.

For the Amateur Radio Newsline, I’m Steve Colletti a-k-a Big Steve Cole of WBCQ Radio reporting fot the Amateur Radio Newsline.
--

The 2004 S-W-L Winterfest is slated a year vfrom now on March 12th to the 13th at the same venue. You will find lots more about it on the web at www.swlfest.com. (Strve Coletti for ARNewsline™)

If Poor Baby Brain had half a clue he'd look back just a FEW years to the time when FCC *did* define Morse proficiency, in the form of a Commercial Radiotelegraph Operator's test. Of course he'd find that definition to be 20WPM, not 10.

You can log that as just one more of the *very* many radio things that Slim never bothered to notice.

Shows what you know! If there ever was a FCC proficiency test it was the (GASP!) Morse code test! for the Commercial Radiotelegraph licenses. Without proficiency in Morse code operation, an operator was less than useless.

Gee, one would think that a fella who had no more than a commercial radio license know that, even if only by accident!.. Of course in your case we all know better.

I'll take your/his word for it. I had no idea it was that low.

Amateur use of Morse on the HF bands is a much higher percentage (I'd estimate
around 40%). I know of only one current-production ham rig that cannot do CW.

>Some vehicles are not available with manual trans at all.

Like my Odyssey.

The manufacturers probably figured that the design and tooling cost is not
worth it for the few cars they would sell with manual transmissions.

I think you mean "manual gearbox testing".

>Additionally, there is an
>argument that manual gearboxes allow greater pollution because
>the driver can rev/race the engine while an auto gearbox
>can be computer controlled throughout the entire operating
>range.
>
It's also possible to rev/race the engine with an automatic by putting the
trans in the wrong gear. And a properly-designed engine control computer can
sense that a manual transmission engine is being improperly operated and limit
pollution.

>> So is the ability to choose the best driver from among
>> those available.
>
>When has anyone asked you or otherwise tried to determine
>who is the "best" driver for a partivular driving requirement?

Many times! Usually, the "best" driver is the one who is most alert, or most
sober, or least upset, etc., at the time.
>
>> Example: Some friends go out for dinner in a stick-shift car. The
>> person who drove has a big meal and feels sleepy afterwards, but has
>> to drive home anyway because the others 'can't drive stick'. Of course
>> it's easy to say they should have taken another car in the first
>> place, but in real life such situations do arise.
>
>So?

So if everyone knows how to drive stick, the "best" driver can drive home.
>
>> > and thus the states abondoned any testing.

>>
>> I disagree again!
>>
>> I think the reasons the states we know of
>
>Trust me...ALL states have no requirement for a manual
>gearbox test requirement.
>
I was disagreeing about the reasons. I'm convinced that no state in the USA requires manual transmission testing for a regular driver's license. CDL is a different story. Of course, the percentage of big trucks with automatics is much lower.

>> ...stopped being fussy about
>> what sort of vehicle was used for testing were:
>>
>> 1) it's a hassle to require a stick shift car for testing (in PA the

>> drivers pass a stick-shift test.
>
>I've been licensed over 44 years and I have never seen any such
>logic put forth in articles regarding testing.

I think #3 sums up your position on the matter, Bill. Let me restate it this way:

The benefits of having every driver tested to drive stick do not outweigh the costs of such testing. Such costs include fewer people being licensed to drive.

>
>> > > No
>> > > problems with "we have to take/buy X's car because Y can't drive
>> > > stick", etc. (Been there, done that!)
>> >
>> > That's a personal problem.

>> Not mine, because I drive all sorts of vehicles. Tested in a manual
>> transmission car, in fact, to avoid any possibility of the dreaded

>> "automatic transmission only" limitation on the license.
>
>Where and when was that limitation being applied?
>
1970s, here in PA. It was possible for the state trooper doing the test to tack
on the restriction "automatic transmission only" if he/she doubted the
stick-shift ability of a new driver. All changed now.

>> > All my kids learned to drive

>
>Not always. The efficiencies can be different in terms of how
>power is applied during acceleration, etc.

Yes, a leadfoot driver with a stick may be outdone by a careful driver in an
equivalent automatic car. But when operated similarly, the stick is almost
always more efficient. Of course with modern lockup fourspeed automatics, the
difference is small, particularly in highway driving.
>
>> Returning to radio for a moment, the spectrum and power efficiency of

Actually, I got the analogy from Bill.

>How come N2EY cannot understand the analogy
>HE gave? He proposed this analogy.

I understand it perfectly.
>
>Now he doesn't agree with the conclusion:

I don't agree with YOUR conclusion.

>There is no NEED for Morse code testing.

I think there is.

The percentage of amateur radio HF communications using Morse is much higher than the percentage of cars with manual transmissions.

A manual transmission car does not use up less road than its automatic transmission equivalent. A manual transmission car use slightly less fuel and pollutes slightly less than its automatic transmission equivalent. A Morse signal uses up much less spectrum than any analog voice signal.

Does any of that mean Morse MUST be tested? Nope. Does any of that mean Morse MUST NOT be tested? Nope. It all boils down to opinions, nothing more.

>It may be good to learn to communicate
>to others that use Morse code, but it is NOT essential.
>
Nor is it essential to know anyhting about how a radio works in order to use one.

Lessee, government procedure stated that whan radioteletype circuits on
standard frequency
channels became unusable due to conditions that personnel were to use
radiotelegraphy to
establish alternate channels. This policy clearly came about because it was a
system that worked, as
evidenced by adequate experience. So what happened in your case? You miss out on
a few
FACTS in your *professional* career? No answer needed, we already know.

You know, Len, it must trouble you that you can't make the "big lie"
claim work. For those who've read your postings here, the evidence is
clear. There is much, much more to be found at google.com.

Your character cannot be assassinated because you've actually done--not
just once but many times over the course of years--the things which
N2EY's profile says that you do.

You just can't help it.

You might place this under "insults", "name calling" and "ridcule".

> >Nooooooo, that isn't all you do. Would you like to fess up or would you
> >prefer to be Googled?
>

Precisely the benefit of Google. You can't change or erase a single
word of your past.

> Stay with the current program.
>
> There is nothing to "confess," Dinosaur Heil.

Why, Len, there are years of your postings which indicate other than
what you are now telling us.

> Morse code communications mode is OBSOLETE.

Let's put this one under "factual errors". Morse is no obsolete than
any of the most used modes. It is used by thousands of radio amateurs
each and every day.

> Morse code is NOT mandated by the FCC over and above
> any other allocated mode by any US radio amateur licensee.

Who said it was?

> The FCC morse code test is OBSOLETE.

They didn't say anything about that when they turned it over to the
VEC's.

> Old-time morsemen are the dinosaurs of the radio world.
> They will die out. Goodbye pterodactyl, you never flew

> well when you did all that flapping.

Okay, we have more name calling, insults and ridicule. Not a perfect score this time, Len.

As opposed to you who don't realize that a quite large proportion of ham
radio
is comprised of active and FORMER professional radio people. Some people
such as yourself refuse to learn anything meaningful beyond your own narrow
interests.

> Those in that much
> larger world tend to look at amateurs as being "in the
> sidelines."
>

Shows how little you actually know. Most professionals I've known who were
also hams
viewed it entirely opposite. Ham radio is where we get to do what WE want with
radio,
not just what little the boss wants. But you never could understand that.

>

> OBSOLETE. The word has two meanings: "1. No longer in
> use,

Well, that one is invalid. Morse code is in full use by MANY radio stations on
a daily basis.
Of course most of them these days are ham radio stations. But not all, by a
long shot.
OF course you know that, but it plays against your Agenda, so there you have
it.

> 2. Out of date."
>

With you it never was IN date. That says nothing whatever about its routine,
daily use TODAY.

> FCC doesn't mandate morse code use over and above any other

Hell, they didn't mandate any mode even way back when there was no other than
Radiotelegraphy!

>
> Except for Maritime Radio Service in the USA on the great lakes,
> morse code isn't needed or required by any other US radio
> service.

You've been reaching way out there in Internet land for information again.
Morse code is required at times when no other mode is available which will
fulfill
the need. As when Dave Heil used it to establish alternate radiotelegraph

circuits for
the Departmwent of State. Likely they don't need to do that anymore, but they could
if "required". QED.

> Those have either dropped it or never considered it in
> the first place.
>

Ah, yes, just like there never was an Interstate Police HF Radiotelegraph net in existance
right up into the 1970's. Right.

>
> The Archaic Radiotelegraphy Society keeps endorsing
> morsemanship to keep their living museum of amateurism
> going as it once was.
>

You might be surprised to know that opposition to Morse by people like you only give it a longer life than it would have ever had without it. The way you go
about "opposing" it draws recruits to it like bears to honey.

>
> >> It is just not defunct, extinct.
> >

> the 1930s?

Where is your intelligence, assuming that you actually have any? If you believe that
advances in electronics don't act to vastly improve radiotlegraphy just as it does other
modes it shows yet again just how uninformed you really are. Surprise, surprise!

Okay, in this one we have "name calling", "insults" and "ridicule"

> Amateur is as amateur does. Heil is an amateur.

Just "ridicule" and "insults" here.

> Dinosaur Heil seems to think that the only "authority" to discuss
> US law is to be licensed in that law.

This one has "name calling".

We're on a level playing field here, Len. You aren't an authority in
the law and neither am I. We can discuss it all we want. That doesn't
make us expert in it and it makes it highly unlikely that either of us
would do very well in debating it with an attorney.

> FCC regulations are law.

You're well known for your masterful statements fo the obvious.

> Heil has NO qualifications in law to talk about law.

Heil is on equal footing with Anderson in this regard.

> It's as simple as that.

It surely is.

> Heil isn't involved in US law.

...just like Anderson.

> Ergo, Heil can't talk about it. Heil isn't qualified.

If we compare this to your distant encounter with amateur radio and its
regulations, you aren't an attorney. You aren't a radio amateur.
You've talked. You've written. You've petitioned your governent.
There don't seem to be many buying what you're selling. Ain't that a
bite?

> Why is Heil here?

I can think of a couple of reasons. Unlike you, I am a radio amateur. This newsgroup is about amateur radio. I have almost forty years direct experience in amateur radio. A better question would be--why are YOU here?

> >> Those who love, honor, and worship morse code are fixated on

>
> ARRL gives out their membership totals periodically. That is

> found under the publisher's statement on the QST subpage.
>
> ARRL membership at about a quarter of all licensed US radio
> amateurs is FACT.

"About a quarter" isn't the same as "at best a quarter". I note that
you snipped your statement so you wouldn't have to see your words again.
The ARRL is the nation's largest amateur radio membership organization
by many magnitudes. Which other amateur radio organization's membership
totals approach a fraction of one quarter of all licensed hams in the
land?

> Dinosaur Heil is still into denial.

This one goes under the "name calling" column.

> >...and you probably wonder why ham radio ops all over the land aren't
> >putting up a statue in your honor after all you've done for them.
>
> ? Strange statement.

Is it? You're a self-appointed advocate, just straighening out and
"modernization" amateur radio for us. We should all be grateful for
your expertise in this avocation of which you are not a part.

> Is Heil thinking about erecting statues for himself? Or just erecting?

We can put this under "ridicule".

> >I can't envision amateur radio ever bringing you personal pleasure, Len.
> >As a matter of fact, I can't envision you ever taking the first step to
> >obtain a license.
>
> Radio god Heil simply cannot envision anyone taking first
> steps that His Highness never took.

That I never took? I took the steps, Len. I didn't sit around jawing
about something for years. I walked the walk. You just talk the talk.

By the way--we'll put this under "name calling"

> >You mean like guys who aren't participants in amateur radio who would
> >tell us how it should be regulated?
>
> Tsk, tsk, tsk. They do every day. 24/7 in fact. :-)

You mean, "they" who are paid to do so? You aren't "they" and "they"
don't work 24/7.

I haven't decided under which column to place the "Tsk, tsk, tsk" yet.
We do have the excessive emoticons beginning here and running on below.

> Those telling you about regulation is the Federal Communications
> Commission commissioners and staff.
>

> "...and that's the way it is." :-)

You aren't "they". And THAT is the way it is.

> >In other words, you don't have any interest in amateur radio as long as
> >there are folks who won't kiss your professional ass?
>
> Tsk, tsk, tsk. Getting more snarly, your Highness? :-)

Not at all. As you'd say, just simple observation.

> Is it that your "amateur ass" hasn't gotten any TLC lately?

Aren't you getting personal?

> >*Poof!* That was your rant going up in blue smoke.
>
> Tsk, tsk, tsk. Dinosaur Heil imaging things again.

I note that you saw fit to snip it. Don't worry, Len. Google knows.

By the way--more for the "name calling" column in the profile.

> >The regs have changed numerous times since I was licensed.
>
> Oh, my, a QUALIFICATION! :-)
>
> >They changed again nearly three years ago.
>
> Tsk, tsk, tsk, a more recent change unnoticed. Inattention
> to the LAW. No problem, Heil isn't qualified in law.

No, it isn't a problem. I'm on equal footing with you in matters of law
and psychology.

> >My self-esteem is intact.
>
> Tsk, tsk, tsk. Spelled "steam" wrong... :-)

Then you must have spelled it wrong. I was responding to what you
wrote.

>
>>> Note this is NOT a radio or electronics skill.

>>The only place I've used morse is on the radio.
>
>It is translating sounds into characters. This is not an electronics skill.

It's a radio operating skill. The reason to have an amateur radio license is so the licensee can legally operate amateur radio stations, not design/build/adjust/repair them.
>
>> I guess everything where people bond
>>together in a joint interest looks like a cult to someone who sees
>>himself as an outsider.
>
>Not when the mannerisms and traditions tend to follow certain conventions
>that are not required for radio operation.

Those mannerisms and traditions make radio operation easier if everyone follows them. For example, it used to be an FCC regulation that hams always give there own callsign last. "K8MN from N2EY" or "K8MN, this is N2EY" were legal, but "N2EY calling K8MN" was not allowed. This rule was dropped, but the procedure remains, because it makes things easier for everyone.

And when addressing someone, it helps to use their name/callsign first.

>Even Hams know this, thats why they say

The KEY element of democracy and freedom is t-o-l-e-r-a-n-c-e. Many do not have the capacity for that KEY element and that is when democracy and freedom are at risk.

Tolerance is a nebulous thing, TIT. Your idea of tolerance does not define
the total aspect, shock that this must be to you. Now, how about you being
a bit t-o-l-e-r-a-n-t and just for now, just once in your Liberal life, shut
that egotistical trap of yours.
It is nice that God gave women mouths. It is too bad he taught them to talk.

> >
> > 73 de Jim, N2EY
>
> Jim, those questions are just too hard.

No, they're easy. Here they are again:

What callsign was used?

What rigs and antennas were used?

Who did the equipment belong to?

What amateur bands and modes were used?

What countries and continents were worked?

How were the QSLs delivered?

Simple, easy questions. Why would the answers be hard?

> Dave asked them too, but I
> gave up.
>
Why not just answer them? I'm not questioning whether your alleged /T5
operation was "legal" or not.

You expect others to answer your questions but you won't answer
theirs. That's a double standard. Also illogical.

Just tell the truth.

What "situation" is that?

> Perhaps this will change soon. Most likely amateur radio will be just
> a diversion, so I just don't care anymore. This may sound bad, but if I get
> something, I can give back.

Ah - there's your problem, Vipul! It all makes sense, now!

You want to get something first - then, if you get what you want, you
may give something back.

The way it works in real life is that you give something, and
hopefully get something in return.

OK, Fart Expert, perhaps you could enlighten us on how effective a
fart is in a mere gale or an ordinary wind gust. And don't go
confusing proficiency with effectiveness.

If? You mean it's not? Show us in an old copy of Title 47 where it's
not. FWIW, I think you could get a telegraphy endorsement to the
present day GROL. Why not show us in present day regulations that the
Telegraphy Exam is or is not a proficiency exam.

Unless you admit that you don't know what you're talking about.

> Without proficiency in Morse code operation, an operator was less than
> useless.

You just said every emergency dispatcher across America is less than
useless.

You're simply wrong.

Dick, wow. I guess everyone in the Army drives a tank, and everyone
in the Air Force flies an airplane, too.

Perhaps you missed that when you are subscripted or enlisted in the
service, not everyone goes into combat. But you did toss your hat in
the ring to go. So don't go putting down every REMF that supports the
combat troops.

Hey, while you're putting down all the REMF's, you might want to
detail your combat experience. I wonder if you've got a box full of
medals you didn't earn, like Steve has talked about.

My comparison was a valid one despite Leonard's comments. You need to
remember too that this isn't a "professional radio" newsgroup, or a
"there I was surrounded by 150 teletype machines with Bear bombers just
minutes away" newsgroup.

Looks like you got prune juice and it has begun to work.

Vipul, I have to believe that your approach is faulty. It is probably
best not to start with, "Why do you guys hate EE's?"

> >What aspects are "more important"?
>
> Experimentation is more important that Morse code. Morse code is so much emphasized that
it takes away from all other aspects.

Even though a lot of hams enjoy using morse code, SSB is in wider use.
I can't believe that you've only attended meetings where CW ops are in
the majority.

> >I suggest you take a look at how many publications ARRL currently

That's right.

> Most hams aren't interested in this, however.

How would you know what most hams find interesting? Even if your
statement was one of the eternal truths, what would stop you from
getting all the ARRL technical publications in existence?

> QST mag more represents current Ham interests.

What do you find wrong with that. QST is a general interest magazine or
at least it used to be.

> >The way it works in real life is that you give something, and
> >hopefully get something in return.

How long does limbo last? I think most folks figure out this basic
premise before reaching adulthood.

> I'd like more preety fems in Ham radio.

...with EE degrees?

> I don't want to learn <Morse> code. Why should I spend time learning something I have no
interest in?

How about to obtain the privileges which go with the license? It really
won't bother anyone else if you decide to try to sit and wait for morse
testing to go away.

You don't have to. Depends on if you want the ticket or not. You are
missing a lot. We only have so many years on this earth, and every year
we wait for the requirement to go away is one less year to enjoy the
fun. I don't do much Morse. But learning it got me my license years
ahead of waiting for the requirement to go away.

What is wiser?

...but you're willing to wait until morse code goes away before you
attempt a license exam which offers HF access. I don't know what the
two bucks is for. I didn't pay anything to participate.

So you had an opportunity to participate, didn't want to wait and you
make posts about the Royal Order of the Wouff Hong without really
knowing what it is all about.

> Find out the topic in advance from the newsletter. Only attend the > interestingones, not the uninteresting ones.

Maybe others find them interesting. I can still enjoy the socializing, the business meeting, the comraderie, the coffee and the donuts. Why should it bother you if I choose to attend a meeting with a boring program? You have trouble even getting out of the house.

Personally, I just think you're either too picky, too smart-mouthed or
just lying. Or perhaps it's a blend of the three.

>Experimentation is more important that Morse code

...to YOU. Experimentation is more important to YOU.

>Morse code is so much
>emphasized that it takes away from all other aspects.

Morse Code is NOT "so much emphasized" that it takes away from anything.

>I'm still in limbo. That's something to consider.

Yes...You are DEFINATELY in limbo...Waaaaaaaay out in limbo.

>I'd like more preety fems in Ham radio.

"preety fems"...?!?! Is that the latest "fad term" in the singles
magazines?

>>How about an ala-carte ham ticket. Just choose the portions you like?
>
>Sorry, but to get the good-tasting "General" dish, you must eat the
>bad-tasting
>"Morse code" dish in front of the waiter.

Then whatever it is you want is obvioulsy NOT worth the effort needed to
obtain it. So why not just quit yer bellyachin' and just live with it until
the rules change?

But here's where you and Lennie show your TRUE colors...You whine and
snivvel so much about experimenting and what the EE element could bring to
Amateur Radio, however the ONLY thing you whine about is those few megahertz of
playground at HF...

"Experimenting" and "homebrewing" are the LAST things on either of your
minds.

>I don't want to learn <Morse> code. Why should I spend time learning
>something

>I have no interest in?

The point is you're not CAPABLE of learning Morse Code and you don't want anyone to realize your shortcoming.

No problem. There's thousands of people just like you. Just stand a little closer to the urinal and no one else will be able to tell.

Steve

>>Wouff Hong ceremony.

>I had a chance to attend one. I asked for my $2 back. I didn't want to wait 3
>hrs to find out.

So...You have spent MONTHS in this forum belittling Amateur Radio
operators for some INFREQUENTLY conducted fun event that you have NOT even
attended, yet claim is such an overwhelming "cult" activity...?!?!?

You insuferable putz!

>>Why should I be bound by your "occasional aspects"?

>Why should amateur radio be bound by Morse code?

It's not. As a No Code Technician you already have access to over 97% os
all Amateur Radio allocations. The Morse Code is only required for access to
about 3% of the remaining allocations and only then because of international
law.

>>Have you given
>>control of your daily life to some sort of family cult?

>Your spouse lets you go?

Your spouse won't? Oh...I forgot...You're hunting "preety fems"...

>>We may even have a program
>>which is of no interest to me whatever.

>Find out the topic in advance from the newsletter. Only attend the
>interesting

>ones, not the uninteresting ones.

Which means the club cannot expect you to support it. Since you seem to expect the rest of the club to listen to what YOU have to say (or are interested in), don't you think you should take YOUR turn sitting politely and listening to what others say or think?

Or should ALL clubs simply ignore the rest of their memberships and cater soley to you, Vipul?

The phrase "spoiled rotten brat" comes to mind.

Steve

I told you long ago that I'd be back to jab you in the butt whenever I read some of your
drivel quoted in
someone else's post that had to be addressed. Well, here's the needle......Enjoy.

>

>
> If Poor Baby DICK would mind dusting off his 1958 Commercial Radio
> study guide, he might be able to show us where "Morse Proficiency" is
> addressed at the FCC.

You're the dingaling who can't understand that "official permission" needs more than just a
"yeah, go ahead", and yet you demand letter perfect clarification on the most accepted of
points.
When the FCC issued a radiotelegraph license to an applicant it was only after he
demonstrated
PROFICIENCY in the use of Morse code- at 20WPM.. Somehow they saw no need to spell it out
in explicit terms.

After all, they were confident that no one as clueless as you would ever show up to take
the test.
Those who did had no questions about any of it. Some people have no such trouble learning
things.

For your obsessive/compulsive behavior. Surely you have a medical
plan being a male nurse and all. Unless you're worried about losing
your security clearance and not getting to participate in your 8th
hostile action.

I wonder about that engineer that rolled 3 grenades into the tents in
Kuwait. Maybe he should have lost his clearance and shouldn't have
been there at all.

>
> Unless you can prove otherwise?
>
The hams using the 0.02 wpm Morse were effective, but not necessarily proficient. I'm almost certain the sending and receiving were done by computer, not by the hams themselves, so their proficiency is unknown and irrelevant.

>I've been to at least 4 clubs in MA. I can't find an EE friendly club.

What would "an EE friendly club" be like? Do you expect all hams to have EE level knowledge?

>I know what Ham radio is.

Your statements here don't indicate that.
>
>>What aspects are "more important"?
>
>Experimentation is more important that Morse code.

So what experimentation are you doing?

>Morse code is so much
>emphasized that it takes away from all other aspects.

How? There's one morse code test element and three written test elements. No morse code test for all of amateur VHF-UHF.

What HF/MF experiments do you wish to do?
>
>>I suggest you take a look at how many publications ARRL currently
>>sells. See how many are about technical subjects and how many are
>>about Morse code.
>
>True ARRL has technical publications.

Not just ARRL, either. RSGB does some great stuff.

How many amateur radio technical publications do you have? How many have you read?

>Most hams aren't interested in this, however.

Our licenses are for operating, not building.

>QST mag more represents current Ham interests.

That's good. It's a general-interest amateur radio magazine.

Have you ever read QEX?
>

You mean "a few days time", Mike.
>
>I don't want to learn <Morse> code.

Then you can't get a General or Extra amateur radio license until the rules
change. Sorry. I don;t make the rules, FCC does. Argue with them.

>Why should I spend time learning
>something I have no interest in?

Same reason others spent time learning things they were not interested in to
pass the written tests.

>the tests other than you perceive them as 'hard'. I don't care about Morse
>one way or the other ... the next thing, I suspect a lot of folks will be
>whining about the theory.

Well, consider the fact that there are three written tests totalling 120 questions to get a full-privileges license. Why does a ham need to learn all that stuff just to operate a QRP CW transmitter on 7005 kHz? (I don't agree with this argument at all - it's just a common anti-Morse-test argument applied to the writtens).

> If you even possess algebra and trig you know how
>easy the tests are.

Ahh - but what about those who don't know algebra and trig? Why should they have to learn something they're not interested in, just to get a ham license?

>BTW, ...ummmm... Scott, interogative, WTF? Snip a cap
>here and add a jumper there ... I doubt that adds too much to the book of
>knowledge, right?
>
Some of us still build rigs from scratch. But I betcha we're a smaller minority than Morse-using hams!

And our licenses are primarily for operating, not building.

> Is this a sand volleyball newsgroup?

I didn't launch into tales of volleyball fifty years back or give Vipul
a history lesson of specific volleyball leagues. I didn't tell him that
his volleyball procedures were bad practice. I compared two separate
types of "audio motor" skills. You and Len have wasted twice as much
time injecting your input as my comparison took--and it has gotten you
nowhere.

> > Looks like you got prune juice and it has begun to work.

Someday you'll get something right. I didn't use "effective" or
"effectiveness". I wrote that you confuse "proficient" with
"efficient". Now you're confusing "efficiency" with "effectiveness".
They do not mean the same thing.

Steve, K4YZ

1263. Is THIS "Big Media" Enough...?!?!

Newsgroup: rec.radio.amateur.policy
Date: 2003-03-24 19:58:05 UTC
From: k4yz@aol.com
Message-ID: <20030324145805.17324.00000074@mb-cc.aol.com>
Source record: 63449

I always get a laugh from those who insist that because Amateur Radio is not always "page one" in the major media that we are somehow insignificant or that our contributions to our country or communities, at whatever level, don't count.

And I laugh a bit harder when we get a bit of that "page one exposure" on CNN, the front page of local papers, or in this case, syndicated radio personality Paul Harvey's commentary.

Quoted from the ARRL website:

Radio commentator Paul Harvey plugs ham radio's emergency communications role (Mar 21, 2003) -- Veteran ABC Radio Networks commentator Paul Harvey on March 19 offered some kind words for Amateur Radio. The mention was the second item on "page four" of his Paul Harvey Noon News and Comment program: "America's quiet warriors are the legion of ham radio operators, 700,000 of them, who are always at ready for backup duty in emergencies--amateur, unpaid, uncelebrated, civilian radio operators, during and after floods and fires and tornadoes. After the 9/11 attacks, hams were indispensable in reuniting friends and families. Most recently it was they who expedited the search for debris after the disaster to the space shuttle Columbia, and right now, at this moment, they are involved in homeland security to a greater degree than you would want me to make public." The commentary's enigmatic and mysterious final sentence --typical of Harvey's habit of leaving his listeners hanging--apparently refers to the fact that many Amateur Radio Emergency Service (ARES) and Radio Amateur Emergency Service (RACES) teams have ramped up their alert status as hostilities get under way in the Middle East. The entire Wednesday noon broadcast is available on Paul Harvey's Web site. Click on the Wednesday noon link under "Listen Now."

Unquote.

I think we can all agree Mr. Harvey's comments reach a pretty sizeable percentage of the population of the United States, let alone the world.

Nothing like an unimpeachable source to make a fool out of the naysayers and Chicken Little's of Amateur Radio's past, present or future.

Thanks, Paul.

There are combat veterans protesting the war. Are they "gutless pukes" and "not real Americans"? Are we all supposed to blindly agree with everything the govt. tells us?
>
>As far as Im concerned those that help the enemy are not Americans.

I'm afraid you're off the mark on this one, Dan.

One of the most important things about any free country is the right of all citizens to nonviolently oppose government policies and protest things they don't like without fear of reprisals. The fact that protesters can march in NYC but not in Bagdad proves the strength of this country and our system. It is precisely that kind of openness and freedom that scares the heck out of tyrants, because they know they wouldn't last ten minutes in a truly free country.

The protesters in this country are merely exercising their rights as free Americans. They're not helping the other side in any way - in fact, they're showing how different the USA is from the other side. Our president is not afraid of opposition protests, but the other side's leader sure is. That's the story that needs to be told.

During WW2, Korea and Vietnam, elections were still held, even though doing so meant that opposition parties had a chance to change the government. The opposition parties succeeded in 1968, too. Did that hurt the USA? I don't think so.

1268. Re: We apologize about Chirac position on Iraq

Newsgroup: rec.radio.amateur.policy
Date: 2003-03-24 22:02:29 UTC
From: Dan/W4NTI <w4nti@NOSPAMmindspring.com>
Message-ID: <b5nvagvsu1@slb5.atl.mindspring.net>
Source record: 63354

OK Jim Ill give you the point about the 'Combat Vets' opposing the war.
They are just mis-guided. The rest are gutless pukes.

And I certainly do think they have the right AND RESPONSIBILITY to protest.
The key word is the Responsibility one. Protesting does not give them the
right to disrupt entire cities and take away from its ability to protect its
citizens from terrorist activities. And it certainly doesnt give them the
right to bring aid and confort to the enemy. You got your opinion, and I
got mine.

Nope....been through it before. And guess what? Still hate the long haired
hippies and their offspring.

Dan/W4NTI

Then the anology as I put it forth is NOT consistent
with morse. Are you suggesting the anlogy as you propose
(i.e. N2EY) would be to require manual gearbox testing?

> The percentage of amateur radio HF communications using Morse is much
higher
> than the percentage of cars with manual transmissions.

The percent of manual gearboxes was once high and even then
many states did NOT require a manual gearbox certification.
EG: NY as far back as 1958.

> A manual transmission car does not use up less road than its automatic
> transmission equivalent. A manual transmission car use slightly less fuel
and

> pollutes slightly less than its automatic transmission equivalent. A Morse
> signal uses up much less spectrum than any analog voice signal.

From (N2EY)
>What would "an EE friendly club" be like?
One thats open to projects, antenna setups (clubs have this now),
troubleshooting, learning operator skills and modes.

One that does not pressure everyone to learn Morse code.

Also skill building activities instead of just meetings.

>Do you expect all hams to have EE
>level knowledge?
No.

>How many amateur radio technical publications do you have?
2+ standard size boxes of amateur radio publications, 2 boxes of (non amateur
radio) EE books.

>Have you ever read QEX?
Yes, and "Ham Radio" magazine also.

>>I don't want to learn <Morse> code.
>
>Then you can't get a General or Extra amateur radio license until the rules
>change. Sorry. I don;t make the rules, FCC does. Argue with them.

I'm good, thanks. I don't need to get on HF. Morse test as a barrier for
General class does not make Ham radio look good, however.

>>Why should I spend time learning
>>something I have no interest in?
>
>Same reason others spent time learning things they were not interested in to
>pass the written tests.

Test can be learned in a day. Some sacrifice.

From (Steve Robeson K4YZ)
>>I've been to at least 4 clubs in MA. I can't find an EE friendly club.
>
> Personally, I just think you're either too picky, too smart-mouthed or
>just lying.

I don't think so. I've been courteous and patient. At first I thought it was the club I went to, so foolishly I tried another. All Ham clubs were same.

>Experimentation is more important to YOU.

And other EEs.

>Morse Code is NOT "so much emphasized" that it takes away from anything.

What about No code=No Ham? Without Morse code, Ham radio is CB? The no-code class is called, "technician", to emphacize that it is inferior to General or Extra class.

The nature of the clubs is operating, contesting, and CW. Hams don't like experimentation.

>"Experimenting" and "homebrewing" are the LAST things on either of your
>minds.

I brought up homebrewing at meetings. No interest by Hams in clubs.

>The point is you're not CAPABLE of learning Morse Code and you don't want
>anyone to realize your shortcoming.

Not everyone is capable of learning a real-time encoding scheme, and such persons can be intelligent in other areas, so I would not feel bad if I could not learn <Morse> code.

>>What would "an EE friendly club" be like?
>
> Members on thier knees, bowing in rhythm to a bulbous-bellied
>pocket-protector/horn-rimmed glasses wearing brass effigy of him while

>Kim W5TIT

Kim:

Just exactly WHAT is it we are supposed to "tolerate?" I, for one American,
have absolutely no problem "tolerating" the fact that my fellow Americans
come from all over the world. However, it is up to them to behave as LOYAL
Americans, and to support what our country is doing when we make
the sacrifices necessary to export freedom and democracy to the innocent
victims of vicious dictators around the world.

No, I do NOT "tolerate" Americans who live in peace and prosperity, yet
feel the need to criticize the policies of our President when his objective is
to end the suffering of an imprisoned and enslaved nation. And I'll tell
you one more thing: If this war isn't about oil, I hope that George W. finds
a way to MAKE it about oil! We've just experienced an unusually cold
Winter here in this country, and if you don't think that the free flow of oil
at market prices is an important national goal of the United States, I
suggest that you volunteer for duty on an Antarctic expedition!

From: k4yz@aol.com (Steve Robeson K4YZ)

>Hams have the stereotype of being weird.
>
> From what CREDIBLE source do you get THAT idea?

I could come up with more credible sources, but that would take too much
effort. And, how would I convince such source to attend a Hamfest?

>You have spent MONTHS in this forum belittling Amateur Radio
>operators for some INFREQUENTLY conducted fun event that you have NOT even
>attended, yet claim is such an overwhelming "cult" activity...?!?!?

When they wore costumes (and it was not Halloween),
and had a stick they were banging to the ground,
and in a line chanting "Wouff Hong, Wouff Hong...",
this sort of made it obvious to me (and non-Ham bystanders), that some kind of
cult was involved.

>>Find out the topic in advance from the newsletter. Only attend the
>>interesting
>>ones, not the uninteresting ones.
>
> Which means the club cannot expect you to support it.

No, not at all.

>Since you seem to

>interested in), don't you think you should take YOUR turn sitting politely
>and
>listening to what others say or think?

This is the topic of presentation for the meeting, not what someone has to say.
I could always arrive after the presentation during break if I want to skip
the topic and still hear what others have to say. If I know the topic is
something I'm not interested in, it makes no sense to sit through it and
listen.

Paul Harvey is known for style of <not very entertaining> entertainment, not news. You listen to him because he's on.

His style is such that the content is not memorable. His style is often monotone and delivered without passion, like he is reading off pages. His delivery of the Amatuer radio "warriors" was in the same tone.

Also, simply stating something <without offering any proof> does not convince the <non-Ham> general public. Besides the Columbia shuttle example, there was no examples or factual support.

I would like positive press for Ham radio - something credible, respected, with examples, and factually supported. Unfortunately, this is not it.

(hope this goes thru the server!)

Basically, another way to say it, "I defend your right to say whatever you want, not necessarily what you say!"

Any suppression of personal freedoms (what the republicrats wanna do) is exactly what we are fighting for allegedly. Hell... I don't agree with most of what Lenny and Bruce have to say in these groups, but I will fight to the death for their right to say it. Only exception in any case is if it legally falls under libel or slander but aside from that I will defend another American's right to freedoms that people like Dan and others have fought for.

How does one behave as a loyal American, Larry? Blindly follow the President without question like we're now accusing the Iraqi people of doing with Saddam? Never question the actions of the military like the German people did during Hitler's time? Say one supports the actions of this country when one honestly does not? Only speak when what is said agrees with your views? Do define how a loyal American is supposed to behave, Larry.

You've obviously not been around very long. Paul Harvey has been on
radio for something like fifty years. Paul Harvey is known for his
great set of pipes and sparkling delivery. Most people connect with
him.

> His style is such that the content is not memorable.

You don't get to remain in broadcast radio for fifty years without
having style.

> His style is often
> monotone and delivered without passion, like he is reading off pages. His
> delivery of the Amatuer radio "warriors" was in the same tone.

Paul Harvey's delivery is anything but monotone. He is an expert in his
use of inflection.

> Also, simply stating something <without offering any proof> does not convince
> the <non-Ham> general public. Besides the Columbia shuttle example, there was
> no examples or factual support.

You don't believe that news sources are checked for accuracy? Vipul, I
sense that not much about anything satisfies you.

> I would like positive press for Ham radio - something credible, respected, with examples,
and factually supported. Unfortunately, this is not it.

Paul Harvey is credible. Paul Harvey is respected. Unfortunately, you
don't seem to know the difference.

> cult was involved.

Granted, it was made "obvious" to you. Take some free advice--don't go
to Mardi Gras in New Orleans or Rio de Janeiro. Don't go to any event
sponsored by Shriners. Don't visit Santa in a department store. Don't
attend a Broadway musical. The costumes and chanting will only leave
you confused.

Sorry. To quote from one of your recent posts:
"I would like...something credible, respected, with examples, and
factually supported. Unfortunately, this is not it."

How are you obtaining permission to attend Dayton? I thought you
weren't allowed to attend ham radio functions.

> >> I had a chance to attend one. I asked for my $2 back. I didn't want to >

So you have not had the experience of a Wouff Hong ceremony since you
did not attend. To quote from one of your recent posts:
"I would like...something credible, respected, with examples, and
factually supported. Unfortunately, this is not it."

That's strange. I've lived in places where there were repeater clubs,
general interest clubs, VHF weak signal clubs, DX clubs and contesting
clubs. They were not all the same. Sorry your answer is not really
supported by the facts you've presented and you've made another blanket
statement about all clubs being the same.

> >Experimentation is more important to YOU.
>
> And other EEs.

All of them? A few of them? Two of them?

> >Morse Code is NOT "so much emphasized" that it takes away from anything.
>
> What about No code=No Ham? Without Morse code, Ham radio is CB? The no-code
> class is called, "technician", to emphacize that it is inferior to General or
> Extra class.

The no-code class is called "Technician" because that is its name. They
had to call it something. You'll note that you need to pass additional
elements to obtain a higher class license. You choose not to do that.

> The nature of the clubs is operating, contesting, and CW.

That's much of what some clubs do. The nature of clubs is SSB, FM,
building, instructing, emergency preparedness, message traffic and
antennas. I'm sorry that you don't find anything of much interest.
Maybe you could hang around with some TV repairmen.

> Hams don't like experimentation.

You've just made another blanket statement which is unsupported by fact.

> >"Experimenting" and "homebrewing" are the LAST things on either of your

>
> Not everyone is capable of learning a real-time encoding scheme, and such persons can be intelligent in other areas, so I would not feel bad if I could not learn <Morse> code.

That's great and you are correct to a point. Not everyone who finds it difficult to learn morse code sets about issuing statements that hams are weird, hams are cultlike, hams aren't interested in experimenting, hams don't want EE's in their clubs or that morse code is merely and audiomotor skill of no importance. On looking at your list of complaints, I have to believe that the problem is you.

> No, I would have more social activities, rather than cookouts, brunch, or

Sure, we could have dances, bob for apples and sponsor a boxing match or have a trip to a WWF (World Wrestling Federation or World Wildlife Federation, take your pick) event.

> >>What HF/MF experiments do you wish to do?

>
> Beautiful female. What's offensive about that?

That's something I've not seen much of at ham radio club meetings. You'll have better luck at a nightclub.

> > you must eat the
> >>>bad-tasting

> priorities?

You want the privileges associated with a higher class license but you are unwilling to learn the material required to pass such an exam. What does that say for your common sense, perspective or priorities. I guess you do have your pride though. Don't learn morse and really teach us a

lesson.

Heil is certain that they are proficient, but doesn't define that proficiency, and disagrees with you and your source for the lowest level of proficiency. He is certain the amateurs involved in this event are proficient because only proficient hams could set a world record using machine sent and received Morse Code at 0.02wpm.

It becomes crystal clear that Heil cannot be rational about the code.

Oh?

I guess his 50+ years in broadcasting that "not very interesting" stuff
was just a fluke, huh?

>His style is such that the content is not memorable. His style is often
>monotone and delivered without passion, like he is reading off pages. His
>delivery of the Amatuer radio "warriors" was in the same tone.

And regardless of the tone, it STILL reached some "millions" of homes and
listeners, which STILL supports my original contention.

>Also, simply stating something <without offering any proof> does not convince
>the <non-Ham> general public. Besides the Columbia shuttle example, there was
>no examples or factual support.

Uh huh. I reiterate my statement above. Regardless of HOW it was
delivered, it was STILL heard in millions of homes the world over. THAT is a
fact supported by A. P. Nielsen ratings, commercial advertisers and just good
old "word-of-mouth".

You don't keep the kind of reputation (and listenership) that Mr. Harvey
has without accomplishing something.

>I would like positive press for Ham radio - something credible, respected,
>with
>examples, and factually supported. Unfortunately, this is not it.

You ARE an assinine idiot! I KNEW IT!

Vipul Shah, you are one incredibly stupid, irreverent and uninformed
IDIOT.

Not POSITIVE...?!?!

Not CREDIBLE...?!?!

Not RESPECTED...?!?!

Paul Harvey is one of the FEW broadcasters who, when he says something,
people trust because he's EARNED that reputation.

You...well...you're just a JERK, and I dare say I am being liberal with praise when I use THAT term.

Steve

>> Personally, I just think you're either too picky, too smart-mouthed or
>>just lying.
>
>I don't think so. I've been courteous and patient. At first I thought it was
>the club I went to, so foolishly I tried another. All Ham clubs were same.

No...they are not.

And I STILL think you're either too picky, too smart-mouthed, or lying.

>>Experimentation is more important to YOU.
>
>And other EEs.

Not when it comes to Amateur Radio, obviously, Vippy. Otherwise this "All
EE" club you'd like to start would be a no-brainer.

>>Morse Code is NOT "so much emphasized" that it takes away from anything.
>
>What about No code=No Ham? Without Morse code, Ham radio is CB? The no-code
>class is called, "technician", to emphacize that it is inferior to General or
>Extra class.

What ABOUT "know code = know ham", Vippy...?!?! I got no problem with
that.

And HOW does the word "Technician" make a class of radio licensure
subserviant ? If they were called "Class A", "Class B", etc, you MIGHT have a
point. However there is NO reference in ANY dictionary ANYWHERE that the word
"Technician" in any way/shape/form is "inferior" to any other word.

>The nature of the clubs is operating, contesting, and CW. Hams don't like
>experimentation.

You have been provided examples that DISprove this assertion, Vippy. To
continue to propagate a mistruth once the facts have been shown to contradict
it is to LIE.

Are YOU a LIAR, Vippy?

>>"Experimenting" and "homebrewing" are the LAST things on either of your
>>minds.
>
>I brought up homebrewing at meetings. No interest by Hams in clubs.

That's not what I said...It's not even CLOSE.

>>The point is you're not CAPABLE of learning Morse Code and you don't want
>>anyone to realize your shortcoming.
>
>Not everyone is capable of learning a real-time encoding scheme, and such
>persons can be intelligent in other areas, so I would not feel bad if I could
>not learn <Morse> code.

If you did indeed earn an EE you have the mental faculties to learn Morse
Code.

>>>What would "an EE friendly club" be like?
>>
>> Members on thier knees, bowing in rhythm to a bulbous-bellied
>>pocket-protector/horn-rimmed glasses wearing brass effigy of him while
>>chanting
>>"ohmmmm ohmmmm ohmmmm"...
>>
>> Of course THAT "cult" would be OK......
>
>No, I would have more social activities, rather than cookouts, brunch, or
>other eating events.

There are only 12 months in a year, and except for "clubs" in elementary,
junior and high school, I don;t know of ANY Amateur Radio Club that meets more
than once a month (committee's of the club notwithstanding. What other "social
activities" would you have them do?

Run singles-ads in the club newsletters for lonely EE's looking for
"preety fems"?

>>>What HF/MF experiments do you wish to do?
>>
>> Working DX, no doubt!
>
>Very funny.

I am not laughing. What would YOU do with your HF privileges that you
cannot already do on VHF+, Vippy...?!?

>>>>I'd like more preety fems in Ham radio.
>>>
>>>What are "preety fems"??
>>
>> Babes...chicks...skirts....dames...You know...anyother adjective he can
>>find to offensively refer to women.
>
>Beautiful female. What's offensive about that?

What's wrong with calling them "ladies", Vippy? Or "women"...?!?! Afraid someone might make you walk side-by-side with one in public?

>>>It's only bad-tasting to some.
>>
>> The lazy, the lame and the excuse ridden, mostly...
>
>How about those with common sense, perspective, balance, pride, or <other>
>priorities?

How about the lazy, the lame, and the excuse ridden...?!?! Seems to fit you pretty well, actually. Any EE worth his salt would simply see the code test as yet another challenge to master.

You simply see it as taking away from your "preety fem" chasing time...

>Hams are weird. Its not regional.Heard several Hams in several states with 2m
>radio. Also, been to Hamfests in MA,NH,CT. . Curious to go to Dayton Hamfest.

Hey Vippy...MA, NH and CT>>ARE<< "regional" to you...In the United States it's called NEW ENGLAND. Everything north of New Jersey and east of the Erie panhandle of Pennsylvania is New England...it's one of the REGIONS of the United States.

And I don't think you'll want to go to Dayton this year...At least not and wear anything that has your real name on it. You've made such a complete and utter fool of yourself, all the stares and fingerpointing might "get" to you...

>>> I had a chance to attend one. I asked for my $2 back. I didn't want to >

>troubleshooting, learning operator skills and modes.

I don't know any clubs that are not open to such things.

I think your problem may be that you want to be the "idea guy" who comes up with suggestions which the others act on. You don't seem to understand that the way to get others interested is to lead by example.

Here's one idea: Although it's late March and still cool in the northeast, Field Day is just three months away. Why not volunteer to provide one station for a local club? Maybe you could provide a solar-powered VHF/UHF setup and contribute some points.
>
>One that does not pressure everyone to learn Morse code.

>
>Test can be learned in a day.

By some. Others take longer.

And you have criticized the ease of the writtens. If someone without an electronics background really wants to learn the written test material, it takes a lot more than a day.

EEs should have little trouble with the theory, and need only a bit of info on the regs.

> Some sacrifice.

It's not about sacrifice. It's about qualifications.

>
>I could come up with more credible sources, but that would take too much
>effort. And, how would I convince such source to attend a Hamfest?

No, no, nooooooooooooo Vippy!

A "source" in this context is a pre-exisiting, knowledgeable or
experienced point-of-reference.

Dragging some ner-do-well off the street to go along with you and then
offer testimony to your opinion is NOT a "source".

And if you ahev to "convince" them to attend, they ahve NO pre-exisiting
experience or knowledgebase from which to make an INFORMED opinion.

>>You have spent MONTHS in this forum belittling Amateur Radio
>>operators for some INFREQUENTLY conducted fun event that you have NOT even
>>attended, yet claim is such an overwhelming "cult" activity...?!?!?

>of
>cult was involved.

WHOA VIPPY!

First you tell us what a waste of time and how "cult" like the Wouff Hong
ceremony is supposed to be.

THEN you publically state that you never attended, choosing rather to not
wait for teh ceremony and asking for your money back.

NOW you are citing specific things they DID there!

Either you LIED about attending or you LIED about NOT attending, but
somehwere in there you LIED! Or worse yet, you are spamming this forum with

your "opinion" on the Wouff Hong ceremony based solely upon third party tellings of the tale. In that case you are LYING about whose experience you are drawing these events from in order to tell yuor tale!

>>>Find out the topic in advance from the newsletter. Only attend the
>>>interesting
>>>ones, not the uninteresting ones.
>>
>> Which means the club cannot expect you to support it.
>
>No, not at all.

Yes, that's it exactly. If you don't attend the meetings, you ae NOT supporting the club. Many clubs have points-of-order that require the memberships advice-and-consent in order to effect into club policy or regulations. If you are not there, you cannot participate. If you do not participate, you are NOT supporting the club!

>>Since you seem to
>>expect the rest of the club to listen to what YOU have to say (or are
>>interested in), don't you think you should take YOUR turn sitting politely
>>and
>>listening to what others say or think?
>

> I could always arrive after the presentation during break if I want to skip
>the topic and still hear what others have to say. If I know the topic is
>something I'm not interested in, it makes no sense to sit through it and
>listen.

Sure it does...it's called "supporting the club".

Someone else took some amount of time to put together a presentation about what he/she likes, and that may often be something you DON'T like...So if you want those folks to pay some attention to YOU, don't you think it's incumbent upon YOU to pay some attention to THEM...?!?!

Or are we back on Vippy Street?...You know...the one that says "ONE WAY"...?!?!

Huh? He does the news and commentary, and a lot of people like him. The
only place where you would listen to him just because he's on is if you
are in an area with only one station.

> His style is such that the content is not memorable. His style is often
> monotone and delivered without passion, like he is reading off pages. His

I hear people quoting him fairl often. They seem to remember what he says.

> Also, simply stating something <without offering any proof> does not convince

What on earth are you talking about? What is proof? If I'm pressed fot
it, I won't believe anything I haven't personally witnessed. But under
normal circumstances, Paul Harvey has a pretty good believability index.

> I would like positive press for Ham radio - something credible, respected, with
> examples, and factually supported. Unfortunately, this is not it.

Ahh, the opening round!

Discredit the source. Problem is, a lot of people *do* respect him.
That you don't is consistent.

>radio. Also, been to Hamfests in MA,NH,CT. .

All within an hour or two of Boston, I bet. That's not much of an area.

Here's a clue, Vipul: Not all hams go to the few hamfests and club meetings you've attended.

>Curious to go to Dayton Hamfest.
>
One of these years I'll get there. Biggest 'fests I've been to are Rochester, NY, Gaithersburg, MD and Timonium, MD. Basically huge flea markets with some interesting programs and social events.

>>> I had a chance to attend one. I asked for my $2 back. I didn't want to >
>>wait 3 hrs to find out.

So you don't really know what one is like, but you already have an opinion.

I've never been to a Wouff Hong ceremony, either, so I don't have an opinion about 'em one way or the other. From what I've heard, they're a lot of fun.
>>
>>...but you're willing to wait until morse code goes away

See what I mean about your not being right? I've never stated that I'm
certain that those achieving the 136 KHz record are proficient, yet
you've stated that I am certain. You don't get anything right.

> It becomes crystal clear that Heil cannot be rational about the code.

What is crystal clear is that you really do have a problem with reading
comprehension.

We've had presidents in scandals too. Not just Clinton
getting a blow job in the White House, but Nixon essentially
rigging an election. Rigging elections is never tolerated
in the USA. (Election rigging in foreign countries by our
CIA is another issue.....). Nail Chirac if those charges
are serious.

You wouldn't be happy if ABC, CBS, NBC, CNN and Fox news all carried
"front page" stories about amateur radio. You would just say it was a slow
news day!

Vipal why don't you go down to the local Wal-Mart and GET A LIFE!

Sadly, this thread has now turned into childish pranks with a single
individual posting using half a dozen names. And that is something I have no
tolerance for, so I'm out of this discussion.

I see a lot of people yelling for peace but I have not heard of one plan for peace. " Books, not Bombs" won't work. The head mullahs won't let anyone read them. If they do, they poke their eyes out.

Here's the plan:

1) The US will apologize to the world for our "interference" in their affairs, past & present. You know, Hitler, Mussolini, Arafat, Sharon, Saddam, and the rest of them 'good old boy's. We will never "interfere"again.

2) We will withdraw our troops from all over the world, starting with Germany, South Korea, Israel, and the Philippines. They don't want us there anyway. We would station troops at our borders and airports. No more sneaking through holes in the (Bureaucratic) fence.

3) All illegal aliens have 90 days to get their affairs together and leave. We'll give them a free trip home. After 90 days the remainder will be gathered up and sent on a DXpedition, regardless of who or where they are.

4) All future visitors will be thoroughly checked and strictly limited to 90 days (unless given a special permit). No one from a terrorist nation would be allowed in. If you don't like it there, change it yourself, don't hide here. Asylum would not ever be available to anyone. We don't need any more cab drivers.

5) No "students" over age 21. The older ones are the usually bombers. If they don't attend classes, or if they get a "D" and it's back home baby.

6) The US will make a strong effort to become self sufficient energy wise. This will include developing non polluting sources of energy but will require a temporary drilling of oil in the Alaskan wilderness. The caribou will have to cope for a while.

7) Offer Saudi Arabia and all other oil producing countries $10 a barrel for their oil. If they don't like it, they can go someplace else.

8) If there is a famine or other natural catastrophe in the world, we will not "interfere". They can pray to Allah, Buddha or whomever, for seeds, rain, cement or whatever they need. Besides' most of what we give them is stolen or given to the army. The people who need it most get very little, if any anyway.

9) Ship the UN Headquarters to an island some place. We don't need the spies and fair weather friends here. Besides, it would make a good homeless shelter or lockup for illegal aliens.

10) All Americans must go to charm and beauty school. That way, no one can call us "Ugly Americans" any longer.

Walk softly and carry a big fish.

Hans, K0HB

I have not been "marketing" amateur radio to EEs. Probably, EEs would be interested.

>And HOW does the word "Technician" make a class of radio licensure
>subserviant ?

Technician implies troubleshooting only, not homebrewing. Some no-coders homebrew more often than General class ticket people.

>If you did indeed earn an EE you have the mental faculties to learn Morse
>Code.

<Morse> code is a different kind of skill. Just because something is generally easier does not mean anyone can do it. It involves audiomotor skills, which not everyone can do. You must admit that being a different kind of skill some people cant learn it.

One should not feel superior for real-time encoding/decoding. Nor should one feel inferior for not being able to learn it.

I have translated encoded symbols in real-time. I can understand those that find real-time encoding/decoding to be fun. I know I have the ability to learn Morse code. I personally can do Morse code. I choose not to.

>to learn, use and drive a manual gearbox vehicle.

That's one interpretation, yes. Of course manual transmissions are not as
common in passenger cars as Morse code is on the ham bands.

The whole reason I brought it up was to provide a better analogy than the "ride
a horse" analogy that was being discussed.
>

>
>Are you proposing a non-technical license?
>
Heck no!

But if someone or some group did want a non-technical ham license, they could
use the same arguments against almost all of the written tests that have been
used against the code tests. And how would we counter those arguments?

Look at the UK's "Foundation" license, for an example of what could happen.

>>Hams are weird.
>
>All of them?

"Ham" radio is a subset focus of amateur radio activites. The activities, in itself, are fine (even code!). Its the "culture" that makes it weird.

Correlation is high, but not all Hams are weird. Two amateurs can participate in same activities. One may be weird, other is not.

Call sign hats,excessive jargon, hatred of CB, is weird, for example.

>Here's a clue, Vipul: Not all hams go to the few hamfests and club meetings

>Participation and inclusion is more important

You cannot "participate" and be "included" in ANYTHING without the correct preparation.

For a job as an engineer, it includes sufficient collegiate level education and some period as an apprentice.

To get into the right night club, it means dressing right, doing your hair the right way, and being able to dance.

For an Amateur Radio license bestowing HF operating privileges, it means taking a Morse Code examination at five words per minute.

Get over it.

Amen. Too many of the protesters are simply career protesters.
They look for the day they have something to protest about, to
disrupt and cause annoyance. They have no particular agenda, they
just want to protest something. They must be kin to Jessie Jackson.

From K4YZ

I says:
>>I could come up with more credible sources, but that would take too much
>>effort. And, how would I convince such source to attend a Hamfest?
Then K4YZ says:
> A "source" in this context is a pre-exisiting, knowledgeable or
>experienced point-of-reference.

>And if you ahev to "convince" them to attend, they ahve NO pre-exisiting
>experience or knowledgebase from which to make an INFORMED opinion.

A credible source should be unbiased. Therefore, a non-Ham can visit a Hamfest.
Then, this person can decide if Hams are weird to them or not.

Another possible credible source is the radio professional or rf professor.

True, one cannot understand everything right away. One must be explained what
certain things mean. Then, one can have an informed opinion. Certain things
are apparent right away however.

>Either you LIED about attending or you LIED about NOT attending, but
>somehwere in there you LIED!

No, I did not. The chanting was not part of the ceremony (as far as I know).
The costumes and chanting occured during the dinner buffet. This was NOT the
Wouff Hong ceremony, but an "advertisement" for the ceremony.
There were non-Ham bystanders. I would guess they found it weird and could have
suspected some kind of cult.

>First you tell us what a waste of time and how "cult" like the Wouff Hong
>ceremony is supposed to be.

From the chanting "advertisement", it looked like a cult.

>THEN you publically state that you never attended, choosing rather to not
>wait for the ceremony and asking for your money back.

True, I did not attend it. I did not want to wait until midnight, so I asked
for my money back. It was not too expensive, just $2. Would have been worth it
if I did not have to wait 3 hrs to see the ceremony (there were no other
activities planned in between). I asked for a refund and they graciously
refunded my money.

Of course, if I did attend, I would be a "traitor". I may possibly get punished
with the strange looking torture device. I heard that the ceremony had to do
with Morse code and operating properly by some other people that claimed to
have attended one before.

>Many clubs have points-of-order that require the
>memberships advice-and-consent in order to effect into club policy or
>regulations.

Then I don't get a vote that meeting.

If you are not there, you cannot participate. If you do not
>participate, you are NOT supporting the club!

Again, I disagree. Also, 2-3 hrs sitting through a topic of no interest is foolish and does not show support. I can attend those meetings after break, if I want to. Often enough there are topics of interest. Those I can attend the whole meeting. That should be fair.

Hansl:

Seems like a perfectly reasonable plan to me. However, we also need
to round up all those who have been oppressed by slavery -- for the
last two centuries -- and send them back to their ancestral homeland as
well. I'm sure that once they return to Africa, they will find their way of
life much more to their liking than here in the oppressive United States.

Steve:

While the Paul Harvey piece does do a great service to ham radio, it is just one piece and will not stay in the public conscience for very long, if at all. We won't be seeing any significant spike in newcomers to our hobby/service as a result of it. What is needed is a continuous, wide-ranging, national media campaign. There are literally hundreds of public service announcements on TV every day -- why can't a few of them be about amateur radio -- produced with the help of our ham radio celebrities with connections in the mass media industry? We're now seeing Joe Walsh, WB6ACU, plugging ham radio products in the magazines -- why can't he plug ham radio itself on TV? I'm sure he has the connections and influence to get this done!

I just had a horrible thought: I hope none of the Dixie Chicks are licensed Amateur Radio operators!

>Dwight Stewart (W5NET)

Dwight:

An important thing for loyal Americans to do is to be well informed. Any
reasonably attentive student of history will be able to draw the conclusion
that appeasement of dictators through diplomacy does not put an end to
vicious, totalitarian regimes. They must be confronted with sufficient force
to put them out of power, in order for a free and democratic society to
flourish after they are gone. The United States, as part of it's generous
nature, exports freedom and democracy at great cost to our own citizens --
including the lives of our young men and women in the armed forces.
Loyal, informed Americans simply can not justify the actions of the present-
day anti-war protesters. They certainly have the right to protest, but in
this case, all they're doing is proving their ignorance of world affairs, or
worse, displaying their cowardice.

Kim/Dwight:

The problem with the present situation is that to protest the actions
of President Bush in Iraq is to say that you do support the cruel,
viscous, murderous regime of Saddam Hussein, and support his goal
of producing weapons of mass destruction to be used to terrorize
the rest of the world. The current-day anti-war protestors seek to
continue the use of non-interventionist diplomacy, which has already
been proven to have failed at altering the course of the Saddam Hussein
regime of terror, murder, and exportation of WMD's. The protesters
here are simply indulging in a knee-jerk reaction to war itself, without
any thought to the fact that there are things far worse than war. How
could they have seen the World Trade Center crumble and the Pentagon
be attacked without thinking that we, as a nation, would have to make
sacrifices to ensure that such a thing never happened again?

War is a bad thing -- a very bad thing. Nobody in his right mind wants
to see young men and women placed in harm's way -- but this is the only
way that freedom and democracy has ever been achieved. Diplomacy
does not work against maniacal, dictatorial tyrants like Hussein. Twelve
years was enough of a test. We are now doing what must be done.

>used against the code tests.

Morse code is irrelavant. The written material is not. There, that's not the same argument.

If you don't understand a safety reg, a rig blows up. Understanding antennas helps you transmit and receive. If you don't understand Morse, you miss out on <one> "fun" activity.

But even when that was the case, the states (many of them anyway)
did NOT require testing on a manual gearbox in order to be allowed to
drive a car with a manual trans.

> >> The percentage of amateur radio HF communications using Morse

A handful at best.

> Today that's all gone - but manual transmissions survive.

And such will be the case for Morse. There will be a group
of folks that use morse, advocate its use, and recruit new hams
to the use of morse....without any need for a test requirement.

Agreed. And the writing is on the wall in that court of opinion.

> >> >It may be good to learn to communicate

Good.

> But if someone or some group did want a non-technical ham license, they could
> use the same arguments against almost all of the written tests that have been
> used against the code tests.
> And how would we counter those arguments?

The counter argument is clear. ALL hams are responsible for their signal transmissions meeting FCC requirements. To allow a non-technical ham license the FCC would have to change/add many rules. For example:

1. A non-technical license would require operation with commercial equipment only.
2. Such commercially spec'd ham equipment would have to have a heavy emphasis on such equipment not being modifiable.
3. Someone setting up a station uder such a license would require some type of "certification" by a technical license holder as to their station being compliant with signal power strength limits for themselves and for public space adjacent to their property.

> Look at the UK's "Foundation" license, for an example of what
> could happen.

Isn't that more like a "lerner's permit" type of license which requires a full license holder to be providing oversight and guidance?

Cheers,
Bill K2UNK

It can be far worse than just a smoking rig.
It can be death of the individual (wiring error leading to electrocution),
It can be a transmitted signal into public space that exceeds
permitted levels.

Cheers,
Bill K2UNK

Probably...BUT!

The one thing I've noticed with any person that actively engages
in a hobby that the public doesn't consider "mainstream" is that
the person is viewed as "weird" or different, etc. Unless you are
a golfer or tennis player, the rest of the world thinks those
of us interested in ham radio, model airplanes, antique cars,
(the list goes on), are viewed as weird.

Cheers,
Bill K2UNK, weird and proud of it :-)

No. I mean a license with no technical questions and just a few
regulations questions.

> Thats a non-technical license. (No
> knowledge of material required to pass the test).

Sounds like you're arguing for a non-technical license.
>
> > the same arguments against almost all of the written tests that have been
> >used against the code tests.
>
> Morse code is irrelavant.

That's simply not true. Obviously you have not actually listened to
the non-voice parts of the HF/MF amateur bands.

> The written material is not.

Why does a new ham have to be tested on theory material beyond that
necessary to understand the regs?

> There, that's not the
> same argument.
>
> If you don't understand a safety reg, a rig blows up.

Maybe.

And so what? Is it the government's job to protect hams from their own
stupidity?

If you try to operate a high-wattage appliance (say, a toaster oven or
space heater) through an inadequately-rated extension cord, you can
burn your house down. Try to drive a manual-shift car without a basic
understanding of how the gearshift and clutch are supposed to be used
and you'll chew up the transmission, clutch or both in short order.
Government doesn't protect people against those things.

> Understanding antennas
> helps you transmit and receive.

So you think such knowledge should be forced down the throats of all new hams, whether they are interested in it or not.

Why not replace the Morse code test with a soldering test? Or a Smith chart test?

> If you don't understand Morse, you miss out on
> <one> "fun" activity.

Actually, you miss out on a lot of fun activities, with a mode that uses less bandspace, simpler equipment and is more effective than many other modes.

Here's your anticodetest argument turned around:

Since no radio amatuer is required to build equipment or even know how it works, why should all hams have to be tested on technical subjects? FCC grants full privileges above 30 MHz to Technicians - why is more theory testing required to work HF/MF?

Answer those in a way that will convince someone who just wants to operate, not learn theory. Can you?

>You mean like the Technician license? Thats a non-technical license. (No
>knowledge of material required to pass the test).

ALL Amateur Radio licenses are "non-technical" byt that standard, Vippy.
Wether ot not it is "technical" is by the implementation of the holder.

>Morse code is irrelavant. The written material is not.

That's pretty stupid, Vipul.

The written material can be memorized for complete rote memorization,
however even some material will be assimilated by sheer volume.

>There, that's not the same argument.

Sure it is.

>If you don't understand a safety reg, a rig blows up.

Bull.

>Understanding antennas helps you transmit and receive.

So what "understanding" does someone have to have other than reading the
label and making sure the radio you are about to screw the PL-259 onto is the
same wavelength band as the antenna it is intended for?

Do I need proficiency in Smith Charts in order to read the instructions
and bolt any antenna together? Even the most elaborate of Amateur antennas
comes with instructions that anyone with a 10th grade reading comprehension
should be able to accomplish.

>If you don't understand Morse, you miss out on <one> "fun" activity.

No, you miss out on MANY fun activites. Too bad you don't take the time
to learn it (the Code) and find out.

Steve, K4YZ

>"Ham" radio is a subset focus of amateur radio activites.

Bull.

>The activities, in
>itself, are fine (even code!). Its the "culture" that makes it weird.

Amateur Radio is what it is. That you are the square peg trying to fit
into the round hole does NOT make Amateur Radio "weird". It make YOU weird.

>Correlation is high, but not all Hams are weird. Two amateurs can participate
>in same activities. One may be weird, other is not.

Using your posts as evidence I would ahve to say that this is true.

>Call sign hats,excessive jargon, hatred of CB, is weird, for example

"Call sign hats"..."Excessive jargon"..."hatred of CB"...

You STILL have yet to tell us who is empowered to make the determinations
as to who may decide what is weird and what is "OK".

So far all we have is your opinon, but so far you've been proven pretty
wrong.

>>Here's a clue, Vipul: Not all hams go to the few hamfests and club meetings
>>you've attended.
>
>This doesn't explain what the Ham radio demographic is.

There is no ONE "demographic" of Amateur Radio participants. It is a
multicultural, multifaceted, multipurpose thing. There is no one right or
wrong as to what makes a good Amateur operator, what makes good Amateur
practice, or how Amateur Radio can be utilized or applied.

Steve

>A credible source should be unbiased. Therefore, a non-Ham can visit a
>Hamfest.
>Then, this person can decide if Hams are weird to them or not.

You're still having comprehension problems, Vipul.

I asked you from what credible sources you developed the opinions you
already hold.

I did not ask you about taking someone to a hamfest to try and create a
corroborating opinion.

>Another possible credible source is the radio professional or rf professor.

You mean like Lennie? A documented pathological liar? Oooooh yeah...I'd
consider THAT "credible"... ! ! !

>True, one cannot understand everything right away. One must be explained what
>certain things mean. Then, one can have an informed opinion. Certain things
>are apparent right away however.

One only manifests an "informed opinon" after having unfettered access to
and practical knowledge of a subject. You seek to take someone who you think
will have a predisposition to your opinion in order to say "I told you so".

>NOT attending, but
>>somehwere in there you LIED!
>
>No, I did not. The chanting was not part of the ceremony (as far as I know).

>have
>suspected some kind of cult.

I think you lied. Period. You got caught up in your own tales and forgot
WHAT you said you believed in and couldn't keep the story straight.

>>First you tell us what a waste of time and how "cult" like the Wouff Hong
>>ceremony is supposed to be.
>
>From the chanting "advertisement", it looked like a cult.

So far all you have been able to "document" for us is that you once bought
a ticket to a banquet where a Wouff Hong "ceremony" was to be held. You
elected to not go for whatever reason, yet all of your rantings and railings in
THIS forum have been based on third party tellings and some "advertisement" you
saw.

In other words, it was NOT an INFORMED opinion. Youa re just running off
at the mouth.

>True, I did not attend it. I did not want to wait until midnight, so I asked
>for my money back. It was not too expensive, just $2. Would have been worth
>it
>if I did not have to wait 3 hrs to see the ceremony (there were no other
>activities planned in between). I asked for a refund and they graciously
>refunded my money.

And thank-you for validating MY opinions over the last few days, Vippy.
You didn't go. You have NO basis of fact from which to make your assertions.
You are expressing an opinion based on thrid party innuendo and guessing on
your part.

Not every impressive for a person alleged to be an engineer.

>Of course, if I did attend, I would be a "traitor".

A "traitor"..?!?! To whom? Sheesh! And Lennie accuses ME of being in
some goosestepping Amateur Radio "Service" (of the military ilk).

>I may possibly get punished with the strange looking torture device.

...Or you may be forced to read your own posts.

>I heard that the ceremony had to do
>with Morse code and operating properly by some other people that claimed to
>have attended one before.

More third party innuendo. No facts.

>>Many clubs have points-of-order that require the
>>memberships advice-and-consent in order to effect into club policy or
>>regulations.
>

>Then I don't get a vote that meeting.

Exactly. Which means while you are in THIS forum bellyaching, you COULD be participating in the local club using the democratic processes that most clubs follow in order to effect teh changes you seem to think are needed.

However I feel you'll probably not do that since it would be embarrasssing to see just how little support your "ideas" have. It also requires some strength of character and "work" in order to work within a democratic framework, and I personally don't think you have it in you.

>If you are not there, you cannot participate. If you do not
>>participate, you are NOT supporting the club!
>
>Again, I disagree. Also, 2-3 hrs sitting through a topic of no interest is
>foolish and does not show support. I can attend those meetings after break,
>if
>I want to. Often enough there are topics of interest. Those I can attend the
>whole meeting. That should be fair.

If you are not there, you cannot participate. If you do not participate, you are NOT supporting the club.

Steve

Also need to keep an eye on what subjects they study. If they want to
be doctors or modern farmers, fine. Nuclear physicists? Sorry.
>

> 6) The US will make a strong effort to become self sufficient energy wise.
> This will include developing non polluting sources of energy

It will also have to include lots of conservation, recycling,
alternative energy sources and utilizations, and lifestyle changes. No
more office workers using a three ton 10 MPG truck as a single person
commuting vehicle, for example. More transit, more telecommuting, more
insulation, less waste. Fewer SUVs, more windmills, more biodiesel.

> but will
> require a temporary drilling of oil in the Alaskan wilderness. The caribou
> will have to cope for a while.

Already being done.

USA imports about half of our oil. How many Americans are willing and
able to cut their petroleum product usage by half, and pay more for
the petrol products they do use?
>
> 7) Offer Saudi Arabia and all other oil producing countries $10 a barrel for
> their oil. If they don't like it, they can go someplace else.

Better have those alternatives in place first.

> any anyway.

Nah. Ship them everything they need as long as it's not a weapon.
Stamp "Humanitarian Gift From The USA" in all sorts of languages all
over everything sent, so they know where it all came from, and what it
really is.
Cost of such aid is far below what is now spent on "defense" of those
countries.

However:

No weapons or weapons-technology sales to any country that does not
have a truly non-repressive, elected form of government, and which
does not sell, loan, give or resell weapons or weapons-technology to
countries the USA won't deal with.
>
> 9) Ship the UN Headquarters to an island some place.

Greenland.

Neutral country, easily accessible, nothing to do there but work out
solutions to the world's problems.

Whoa - call sign hats? What is weird about call sign hats?

I don't know any hams who use excessive jargon or who hate CB, so that
just leaves the hats.
>
> >Here's a clue, Vipul: Not all hams go to the few hamfests and club meetings

Thanks for yet another example of your reading comprehension
difficulties.

> That the 0.02wpm coders are proficient?

I wrote (quote)
Dig back in the thread a little, Brian. That's one of the points I made--that we don't know the code proficiency of either ham. We don't know that their maximum morse receiving speed is higher than .02 wpm. I have an idea that it it. You seem to have made an assumption that it is on the order of .02 wpm and then asked if that was "proficient". Such comments just make you look like a dullard. (unquote)

You can dig back in the thread for similar items posted by me.

> Or that you don't know what Morse Proficiency is?

Your problem is reading comprehension.

>the petrol products they do use?

Actually, US domestic oil production currently amounts to 5.8 million
barrels per day (see, e.g.

http://www.ott.doe.gov/facts/archives/fotw249supp.shtml

) while domestic oil consumption is near or above 20 million barrels
per day. Worse, the US only has reserves to sustain this production
level for 7 years or so, though that can probably be fixed if the
price of oil goes substantially higher and stays there.

Despite this, I have seen the 50% import number quoted quite often. My
best guess is that it may include production by domestic oil companies
in nearby countries, like Canada and Mexico, in the "not-import" category.
I wouldn't want to count on the security of that production, however, if
they get screwed over by things like increased border restrictions...

>> 7) Offer Saudi Arabia and all other oil producing countries $10 a barrel for
>> their oil. If they don't like it, they can go someplace else.
>
>Better have those alternatives in place first.

It does seem that the US no longer has the leverage it once had. Oil
consumption in the rest of the world has grown to about 60 million
barrels per day, which means that US imports account for no more than
20% of that business. There are lots of other places to go. And even
now the US imports only 2.5 million barrels per day from all Persian Gulf
countries combined, an amount small enough that reducing it to zero
probably wouldn't bother them much.

I quite disagree with your observation that to dissent=agreement or support,
in this case, with Saddam Hussein. However, this debate is out of the realm
of what I was responding to in this thread.

The original post that started this thread was from someone expressing
disdain with the French president's position on the war against Iraq. Dan,
W4NTI was the first to respond with the message that [paraphrased] if the
person disagreed with the French president, then he/she should vote them out

of office. Dwight then stated to Dan that he (Dan) did not represent or speak for the USA. Then there's the usual exchange of snips back and forth...and my first entry into the thread was to respond to a post from Bert Craig, where he [paraphrased] that everyone has the right to their own opinion and to express it. My response was that the KEY element to democracy and freedom is tolerance. As an aside, it seems that Dwight took some exception to this, since he promptly stated that he was exiting from the thread.

However, my original statement/response stands. It is for the reason of intolerance from some of our own US citizens that we often lose sight of the fact that we are, as US citizens, allowed a diverse set of opinion and we also have the right to express them--without fear.

I refer back to your paragraph, above, Larry, and won't even engage you on the rest of your post, below. Do you really think you are not passing judgement on someone's beliefs when you insinuate that dissent=support or agreement with something others may disagree with? If so, do you *really* think you are being tolerant?

No comment.

>> Its probably the most technical "entry-level" exam ever.

Not at all.

Back before the 1951 restructuring, all new US hams started out with either a Class C or Class B license. 13 wpm code, send and receive, plus a written test of about fifty questions that included calculations, drawing schematic and block diagrams, and essays. No Q&A pools or one-day classes, either.

I can post some of the questions from the 1948 study guide. I doubt ol' Vipul could answer them without some research.

Sure. But the same thing can happen, and does, when homeowners do their own
electrical wiring or appliance repair. No test for doing that kind of work to
your own property.

>It can be a transmitted signal into public space that exceeds
>permitted levels.
>
True - but all that's required to prevent that is a lower power limit and a few
RF exposure questions on the test.

>
>Good.
>
Of course the definition of "technical" is largely a matter of opinion. An EE's
opinion of a "technical license test" may be quite different from, say, an
accountant's.

>> But if someone or some group did want a non-technical ham license, they
>>could
>> use the same arguments against almost all of the written tests that have
>> been
>> used against the code tests.
>> And how would we counter those arguments?
>
>The counter argument is clear. ALL hams are responsible for their
>signal transmissions meeting FCC requirements.

Sure. So are all users of radio transmitters.

(Devil's Advocate Mode = ON)

But there's no test for, say, a cell phone, or an FRS or GMRS radio. Or a CB.

Does anyone really think that the current writtens test for all the info a ham
needs to insure that his/her transmitters meet all FCC requirements?

>To allow a non-technical
>ham license the FCC would have to change/add many rules. For

>example:
>
>1. A non-technical license would require operation with
>commercial equipment only.

What % of US hams today homebrew their rigs?
What % of US hams today use rigs that require tuneup/adjustment to insure purity/quality of transmitted signal?

I'd venture to say that the percentage of hams using Morse is much higher than the percentage of hams doing either of the above.

>2. Such commercially spec'd ham equipment would have
>to have a heavy emphasis on such equipment not being modifiable.

Why?

>3. Someone setting up a station uder such a license would
>require some type of "certification" by a technical license
>holder as to their station being compliant with signal power
>strength limits for themselves and for public space adjacent to
>their property.

Not really. If the power level of the non-technical license were kept low enough (say, 100 W on HF/MF and 25 W on VHF/UHF), and if there were a few RF safety questions on the test, all would be fine.

There's no test for a microwave oven.
>
>> Look at the UK's "Foundation" license, for an example of what
>> could happen.
>
>Isn't that more like a "learner's permit" type of license which requires
>a full license holder to be providing oversight and guidance?

Nope. Basically it's a reduced-requirement license. Foundation hams take a "Morse assessment" test and a very simplified written. Foundation hams must also attend an approved course. (The Brits are very big on having new hams take formal courses in ham radio rather than do all self-study).

They are allowed low power (100 W on HF, as I recall) and must use "approved" rigs. The list of approved rigs is extensive, and includes kits as complex as the Elecraft K2.

The fact of the matter is that right now FCC allows Technician class hams of any age, experience, or education to design/build/repair/modify/adjust and operate rigs of up to 1500 W output on all amateur bands and modes above 30 MHz. Except for rules and propagation specific to HF/MF, why must Generals and Extras learn more theory and take more written tests to get HF privs?

(Devil's Advocate Mode = OFF)

"Failure to adapt to military service" is "punished" only with a General Discharge, which can be easily upgraded to Honorable at the former servicemember's request. It is not "punished" unless the individual commits offenses against the UCMJ as a result of his "inadaptability."

Most of the people Hans is talking about have "assimilated" into American society just fine. They have learned to work the system and live off the Welfare State -- and they are the willing pawns of liberal, socialist, Democrat politicians who create and prolong their misery as a means of developing their power base. These politicans have created crimes against society, and need to be dealt with as criminals should be.

'73' From KB9TMP

The Shelby County Alabama Legislative Delegation hosted a "Stand Up for America Rally. " More than 1,200 people attended including featured speakers Chief Justice Roy Moore, Adjutant General Mark Bowen and Alabama State Auditor Beth Chapman. Attached is a copy of Mrs. Chapman's speech, which resulted in five standing ovations, tremendous applause and an encore. It's a short read and well worth it. I hope you enjoy it as we continue to "Stand up for America!"

Stand Up for America Rally Speech By: Beth Chapman

I'm here tonight because men and women of the United States military have given their lives for my freedom. I am NOT here tonight because Sheryl Crowe, Rosie O'Donnell, Martin Sheen, George Clooney, Jane Fonda or Phil Donahue, sacrificed their lives for me.

If my memory serves me correctly, it was not movie stars or musicians, but the United States Military who fought on the shores of Iwo Jima, the jungles of Vietnam, and the beaches of Normandy. Tonight, I say we should support the President of the United States and the U. S. Military and tell the liberal, tree-hugging, Birkenstock-wearing, hippy, tie-dyed liberals to go make their movies and music and whine somewhere else.

After all, if they lived in Iraq, they wouldn't be allowed the freedom of speech they're being given here today. Ironically, they would be put to death at the hands of Sadam Hussein or Osama Bin Laden. I want to know how the very people who are against war because of the loss of life, can possibly be the same people who are for abortion?

They are the same people who are for animal rights but against the rights of the unborn. The movie stars say they want to go to Iraq and serve as "human shields" for the Iraqis. I say let them buy a one-way ticket and go.

No one likes war. I hate war! But the one thing I hate more is the fact that this country has been forced into war - - innocent people have lost their lives - - and there but for the grace of God, it could have been my brother, my husband, or even worse my own son.

On December 7, 1941, there are no records of movie stars treading the blazing waters of Pearl Harbor.

On September 11, 2001; there are no photos of movie stars standing as "human shields" against the debris and falling bodies descending from the World Trade Center. There were only policemen and firemen - -underpaid civil servants who gave their all with nothing expected in return.

When the USS Cole was bombed, there were no movie stars guarding the ship - - where were the human shields then?

If America's movie stars want to be human shields, let them shield the gang-ridden streets of Los Angeles, or New York City, let them shield the lives of the children of North Birmingham whose mothers lay them down to

sleep on the floor each night to shelter them from stray bullets.

If they want to be human shields, I say let them shield the men and women of honesty and integrity that epitomizes courage and embody the spirit of freedom by wearing the proud uniforms of the United States Military. Those are the people who have earned and deserve shielding!

Throughout the course of history, this country has remained free, not because of movie stars and liberal activists, but because of brave men and women who hated war too. However, they lay down their lives so that we all may live in freedom. After all - "What greater love hath no man, that he lay down his life for his friend," or in this case a country.

We should give our military honor, and acknowledgement, and not let their lives be in vain. If you want to see true human shields, walk through Arlington Cemetery. There lie human shields, heroes, and the BRAVE Americans who didn't get on television and talk about being a human shield - they were human shields.

1 thank God tonight for freedom - - those who bought and paid for it with their lives in the past - - those who will protect it in the present and defend it in the future.

America has remained silent too long! God-fearing people have remained silent too long!

We must lift our voices united in a humble prayer to God for guidance and the strength and courage to sustain us throughout whatever the future may hold.

After the tragic events of Sept. 11th, my then eleven -year-old son said terrorism is a war between them and us, and if you're not one of us, then you're one of them.

So in closing tonight, let us be of one accord, let us stand proud, and let us be the human shields of prayer, encouragement and support for the President, our troops and their families and our country.

May God bless America, the land of the free, the home of the brave and the greatest country on the face of this earth

Thanks, but I don't want to learn Morse code. I am an EE, and I like putting circuits together and making them work.

I designed and built some transmitters. I like seeing the output on the scope or spectrum analyzer. This could be a fun actvity. Cool- waveform appears when you talk into transmitter!

Sometimes I have to run back and forth. (This is not funny). If someone with similar interests helps me, it would be easier.

>wrong as to what makes a good Amateur operator, what makes good Amateur
>practice, or how Amateur Radio can be utilized or applied.

Ideally that would be true. The hobby needs to be strong in each area.

Technically a wide range of activites are possible. Realistically, Hams participate in some of these activties, as a group, more than others.

The QST magazine gives a good indication of today's Ham radio demographics. (Yes, I am aware that once in a while they have circuit design articles). It is heavily operator oriented, many articles on antennas, radio accessories, political news, product reviews, and contest scores. There are few articles on homebrewing.

>you don't know.

I know what the demographics are. I was asking you to state what you believe
the demographics to be.

QST magazine give a fair representation of Ham radio demographics.

From K4YZ:
> I did not ask you about taking someone to a hamfest to try and create a
>corroborating opinion.

In determining whether Hams are weird, it makes perfect sense to invite a non-Ham to a Hamfest and compare Hams with their experiences.

You're right that some explaination is needed. A person introduced to Ham radio will not be able to understand the terminology used by Hams.

Even if the most strong Ham Radio advocate explains what Ham radio is about, after the person learns the Hams ways, the person will believe Ham radio is weird.

I was introduced to a Hamfest. I went there unbiased and open to new ideas. At first, I believed I didn't like it because I didn't understand the terminology. Then after I understood it, I thought it was weird.

I was open to new ideas. I refused to believe Ham radio was not for me, so I tried another club. Unfortunately, each club disappointed me. Few liked to build circuits and experiment. The few that did were hard to contact. Some made promises, but they never materialized. Yet, others will make every effort not to miss a Hamfest. I know what the priorities are in Ham radio.

>I think you lied. Period. You got caught up in your own tales and forgot
>WHAT you said you believed in and couldn't keep the story straight.

Now YOU ARE being silly. I explained the whole Wuoff Hong situation in complete detail.

>If you are not there, you cannot participate. If you do not participate,
>you are NOT supporting the club.

I participate. Just not EVERY meeting.

From N2EY

>> If you don't understand a safety reg, a rig blows up.
>
>Maybe.
>
>And so what? Is it the government's job to protect hams from their own
>stupidity?

Yes, definately in the case of amateur radio. Otherwise what is the purpose of being licensed? Would you get a driver's license if you kept crashing? Safety questions are important. Its part of operating a radio correctly.

>If you try to operate a high-wattage appliance (say, a toaster oven or
>space heater) through an inadequately-rated extension cord, you can
>burn your house down. Try to drive a manual-shift car without a basic
>understanding of how the gearshift and clutch are supposed to be used
>and you'll chew up the transmission, clutch or both in short order.
>Government doesn't protect people against those things.

Yes, but you don't need a license to do those things. By the way, please stick to amateur radio. Once in a while analogies clarify. Too many analogies gets <more> confusing.

>Why not replace the Morse code test with a soldering test?
That would be more relavant.
Or a Smith
>chart test?
Not needed. Most antenna matching problems are solved by other methods.

>Since no radio amatuer is required to build equipment or even know how
>it works, why should all hams have to be tested on technical subjects?

True.

>FCC grants full privileges above 30 MHz to Technicians - why is more
>theory testing required to work HF/MF?

Because FCC has to make policy changes that work with their previous regulations. They can't fix it so people are tested properly for relavant skill because this would mean taking away existing priveledges - and that is unfair to those who have gotten those privaledges.

>Answer those in a way that will convince someone who just wants to
>operate, not learn theory. Can you?

A better idea would be to create a seperate path for Morse. Then, no need to pass Morse test to get General or Extra class license. However, no HF

privileges for only passing written test. With a minimum of Technician class, passing Morse test gets HF priveleges. Sole purpose of Morse code would be for HF access. Understand the idea?

For someone that just wants to operate and not learn theory, they wouldn't have to be burdened with the General written test to get HF priveledges.

And, lets face it The Technician test can be passed easily by most in one or two tries. Many, including children (I know because they passed when I took the test), with no technical background, can pass the test in one 8 hour "license in a day" class. It was scheduled for 8 hours, but it was more like 6 with all the breaks taken. 75% of those who took the test passed it the first time.

The class gave the questions and the answers to those questions. No wonder why so many passed so easily! I would say that many of them did not learn the theory.

Anyway, for someone that just wants to operate and not learn theory, this is not much of a sacrifice at all.

>comes with instructions that anyone with a 10th grade reading comprehension
>should be able to accomplish.

Steve, antennas are much more complicated than that. Sure one can just follow the directions to put an antenna together. But there is alot of things with antennas that require understanding. Things such as checking for SWR, modifying for other bands, knowing which antennas are good for which bands, matching antennas, and many other things.

I have to give Hams credit for their skill in this area. I have heard Hams explain some of the things they do and it does take skill to do that. They are able to make interpretations that are not exactly common sense as you seem to imply. It is a technical skill and many Hams are quite good in this area.

Fine. Then stop complaining.

> I am an EE, and I like putting
> circuits together and making them work.

You can do that all day long without any amateur radio license. There
are people who will even pay you to do so. You don't have to endure
what you perceive as a cult, ham radio weirdness, morse code, boring
club meetings--none of it.

> I designed and built some transmitters. I like seeing the output on the scope

> you talk into transmitter!

Great. You can build anything you like with nothing more than the
license you already have.

> Sometimes I have to run back and forth. (This is not funny). If someone with
> similar interests helps me, it would be easier.

You goal is in sight. You don't need a club. You only need to convince
one person of how much fun he can have.

Let's see some of our larger organizations start working for the publicizing
and promotion of amateur radio! Not just "famous" hams. Let's start
pressuring these organizations to push radio and television to run "PSA's"
as the radio station and television stations are supposed to as part of
their broadcast licensure.

Dunno if print media is required to run PSA type of ads, but that would be
good too.....

Okay... I'll bite on this one..... What about the millions of gallons flowing through our Alaska pipeline that is sold to other countries other than us?? (sold to Germany, France, Japan etc.) What about the thousands of oil well rigs across the country pumping out oil etc. on a daily basis? Oh... and this one I love, most of what is coming out of these wells as a by-product or waste product is being (at least here in Michigan) upped thirty percent when it is something that the basically get for free! Hmmm propane and gas for heating is going up that much around here....

There's enough oil underneath us to last longer than even our grandkids would need to worry about.... but our big oil corporations are working WITH OPEC in my own opinion, not against them.... Can't prove that but I bet I am not too far from the mark on that one...

Seems to me that one of the oddest things about American culture is the idea
that because a person is talented in some form of show business (singing songs,
acting out parts on stage, in movies or TV shows, playing professional sports),

that the person is also some sort of role model or leader.

Yes. You changed the subject.

>>stupidity?
>
>Yes, definately in the case of amateur radio. Otherwise what is the purpose
>of
>being licensed? Would you get a driver's license if you kept crashing? Safety
>questions are important. Its part of operating a radio correctly.

Absolutely NOT. One of the biggest problems in America is abbrogating our
responsibilities to the government. "Someone" has to be responsible as long as
it's not "us".

>Yes, but you don't need a license to do those things. By the way, please
>stick
>to amateur radio.

I missed the post from the USENET God that appointed Vipul as moderator.

>Once in a while analogies clarify. Too many analogies gets
><more> confusing.

I suppose it does is English is a second language to you.

>A better idea would be to create a seperate path for Morse. Then, no need to
>pass Morse test to get General or Extra class license. However, no HF
>privileges for only passing written test. With a minimum of Technician class,
>passing Morse test gets HF priveleges. Sole purpose of Morse code would be
>for
>HF access. Understand the idea?

Do YOU understand that YOU at first say it's unnecessary to test for Morse
Code then trun around and say it is...?!?!

Sheeesh!

>For someone that just wants to operate and not learn theory, they wouldn't
>have
>to be burdened with the General written test to get HF priveledges.

And then they wouldn't meet the criteria as set out in 47CFR97.1, Basis
and Purpose of the Amatuer Radio Service.

>The class gave the questions and the answers to those questions. No wonder
>why
>so many passed so easily! I would say that many of them did not learn the
>theory.

Come up with that theory all on your own?

>Anyway, for someone that just wants to operate and not learn theory, this is
>not much of a sacrifice at all.

It is when you consider the Basis and Purpose of the Amateur Radio
Service.

Steve

>Steve,...(SNIP)

WHOA! you called me by my given name! let's put THIS day on the
calendar!

>...antennas are much more complicated than that.

The designing and modelling of antennas is much more complicated than
that, Vipul, but using them is not. If it were, 11 million CBer's and 100
million cell phone userds would be off-the-air.

>Things such as checking for SWR, modifying
>for other bands, knowing which antennas are good for which bands, matching
>antennas, and many other things.

I can instruct almost anyone how to do a preliminary SWR check in only
minutes. It does not make them a technician.

>I have to give Hams credit for their skill in this area. I have heard Hams
>explain some of the things they do and it does take skill to do that. They
>are
>able to make interpretations that are not exactly common sense as you seem to
>imply. It is a technical skill and many Hams are quite good in this area.

Yes, many Amatuers are very good at it. Because between the time they are
chanting at Wouff Hong ceremonies in the middle of the night or wasting thier
time over a visceral audiomotor skill such as Morse Code they actually are able
to learn and apply what they learn.

Amazing, huh...?!?!?

Steve

>>corroborating opinion.
>
>In determining whether Hams are weird, it makes perfect sense to invite a
>non-Ham to a Hamfest and compare Hams with their experiences.

That's NOT what you were asked, Vipul.

I asked you from what source you made your EXISTING opinion.

>You're right that some explaination is needed. A person introduced to Ham
>radio
>will not be able to understand the terminology used by Hams.

Nor would a person introduced to NASCAR, or Formula-V aircraft racing, nor
Quarterhorse showing, nor to Pokemon card collecting...

You keep trying to make a point that there is some difference between
Amatuer Radioand every other pursuit in normal human endeavour. It's foolish,
Vipul.

>Even if the most strong Ham Radio advocate explains what Ham radio is about,
>after the person learns the Hams ways, the person will believe Ham radio is
>weird.

Uh huh...I can make brain surgery look really foolish too, but I bet if
you just got hit in the head you'd like to know a good neurosergon.

>I was introduced to a Hamfest. I went there unbiased and open to new ideas.
>At
>first, I believed I didn't like it because I didn't understand the
>terminology.
>Then after I understood it, I thought it was weird.

The problem is, Vipul, based upon your posts here, you DON'T understand
Amatuer Radio.

>Now YOU ARE being silly. I explained the whole Wuoff Hong situation in
>complete
>detail.

Yes, you have. You explained that you have been making your claims based upon a complete lack of first hand experience from which to be making those claims. Not very engineer like, Vipul.

>I participate. Just not EVERY meeting.

Which club?

You are a dumb one aren't you? My actual name is James R. Bond. If you had a clue to where I reside, you could see my name in the telephone book.

After searching the archives, it appears to me that you are a sheep/follower. You attach yourself to any kind of club etc., that you think will listen to you and or let you join.

Most everyone here has you pegged correctly.

The funniest one was where you claimed to be the Chief of Communications for some organization called B.A.R.F., after perusing those archives, it would appear that you appointed yourself to that "position", a fellow named Herb who was the head of the B.A.R.F. said that you were nothing more than a lacky.

Cheerio,

James

> >
> > Yes, definately in the case of amateur radio.

Incorrect.

Perhaps that's part of your problem, Vipul. You think the govt. should
protect you from your own stupidity.

> Otherwise what is the purpose of
> being licensed?

There are two main purposes for radio licenses:

- To insure orderly use of a limited public resource
- To protect third parties from the stupidity of those who use the
resource.

It's NOT to protect you from yourself.

> Would you get a driver's license if you kept crashing? Safety
> questions are important. Its part of operating a radio correctly.

So is using the correct operating procedures, which you describe as
"excessive jargon" and "weird".

The driving test is to insure that drivers can operate a vehicle
safely, not that they know how a car works. The DMV will not revoke
your license if you ruin your car's engine because you never change
the oil.
>
> >If you try to operate a high-wattage appliance (say, a toaster oven or

> > >Government doesn't protect people against those things.
> >

> Yes, but you don't need a license to do those things.

That's the whole point. Licenses are NOT meant to protect you from
yourself. They are to protect others.

> By the way, please stick
> to amateur radio. Once in a while analogies clarify. Too many analogies gets
> <more> confusing.

Analogies illustrate the principle. There are far more dangerous
things than a burned-up transmitter, but the govt. doesn't try to
protect us from them by means of licenses. Licenses are to protect
third parties.
>
> >Why not replace the Morse code test with a soldering test?
> That would be more relavant.

Why? No ham is required to solder.

> Or a Smith
> >chart test?
> Not needed. Most antenna matching problems are solved by other methods.
>
> >Since no radio amatuer is required to build equipment or even know how

Then there's no NEED for most of what's on the written test.
>
> >FCC grants full privileges above 30 MHz to Technicians - why is more
> >theory testing required to work HF/MF?
>
> Because FCC has to make policy changes that work with their previous
> regulations.

Not at all. FCC could have just one license class. 5 wpm code as long
as it is required by treaty, and a single written similar to the
Technician. Or two classes - one with HF and one without.

The point is that the same arguments used against the code can be used
against the written.

> They can't fix it so people are tested properly for relavant

RELEVANT. Turn on your spell checker!

> skill
> because this would mean taking away existing priveledges - and that is unfair
> to those who have gotten those privaledges.

Nope.

>
> >Answer those in a way that will convince someone who just wants to

They did not learn it at the level you would like, that's all.
>
> Anyway, for someone that just wants to operate and not learn theory, this is
> not much of a sacrifice at all.

Half an hour of study per day for a month will permit most people
(including children) to learn enough Morse to pass Element 1. Free
software that will run on most computers is widely available. For
someone that just wants to build or experiment and not learn Morse,
this is not much of a sacrifice at all.

> that you don't know what you're talking about?

Why? That'd be because I do know what I'm talking about. I do know
that we don't have a handle on the morse proficiency of the ops in
question. I do know that I am not confusing the .02 wpm used to achieve
a record with the maximum speed of which the ops are capable.
I do know that "proficient" means "expert, skilled". I do know that
five word per minute morse speed cannot by any stretch be considered
"expert" or "skilled". I knew what I wrote previously and quoted
above. I knew from your reponse that you didn't comprehend what you'd
read. I know from your dodge on your latest response that you'd like to
gloss over your mistaken comments about what I've previously written. I
do know that, despite your earlier claim, you do have time for silly
games. That's why.

Dave K8MN

Fascinating page! Here are some more links to that info:

Top Ten Petroleum Importing Countries:

http://www.ott.doe.gov/facts/archives/fotw248.shtml

Where Does Our Oil come From?

http://www.ott.doe.gov/facts/archives/fotw192.shtml

(note that #6 on the list is IRAQ!)

World Oil Reserves, Production, and Consumption

http://www.ott.doe.gov/facts/archives/fotw220.shtml

None of which is very encouraging for US energy independence.
>
> Despite this, I have seen the 50% import number quoted quite often. My

> I wouldn't want to count on the security of that production, however, if
> they get screwed over by things like increased border restrictions...

Probably not a big problem because of the long term friendly relations
between countries. However, doing without other imported oil sources
will take more than drilling in Alaska.

And it takes years to bring a distant facility into full production.
>
> >> 7) Offer Saudi Arabia and all other oil producing countries $10 a barrel for

That's the loss of leverage - it would bother us a lot more than them.

So I'll ask the hard question: What changes are Americans willing to
make in their lives to reduce/eliminate dependence on imported oil?

Here's an even more fun activity: Use the transmitter to communicate
with other hams!

Designing and building does not require a license. Operating does. You
may not like it, but that's the way things are. And they are that way
for a very good reason.

> Sometimes I have to run back and forth. (This is not funny). If someone with

You stated that the Technician license test is "probably the most
technical "entry-level" exam ever.". I simply proved that it isn't.
>
> > I can post some of the questions from the 1948 study guide. I doubt ol' Vipul
> > could answer them without some research.
>
> 1948 was before my time also. Did you actually use that study guide to test?

How does one "use a study guide to test"?

The point is simply that the "entry level" tests today are not nearly
as technical as they once were. And that's a GOOD thing.

1428. Re: test

>All the others are just wasting bits.

The old 5-level teleprinter codings were obsolete over 30 years ago.

"REAL TELETYPE" machines (by Teletype Corporation) use an 8-level
code and have done so for over two decades. The MILLIONTH
Teletype Corporation teleprinter was made some time close to 1980;
It was an 8-level code ASR-33 and displayed at trade shows.

The epitome of amateur radio skill is proficiency in morse code. That
is what all those amateur extras tell me. :-)

Here we go again! Doctor Kildare II, having "worked in engineering,"
knows Everything about engineering!

Yes, a half-year as a PURCHASING AGENT in a small company making
modems, set-top boxes, and LAN electronics KNOWS ALL ABOUT
ENGINEERING! Filled out purchase forms and thinks he signed off
design drawings...chatted with others during lunch and thought he was
in a design review meeting! He absorbed all engineering knowledge
and experience by osmosis?

Not a long "career" in "professional radio," was it? Why?

>>I participate. Just not EVERY meeting.

What orders, Leonard? I answered Brian's question.
Who is "Das Oberst"?

> The Chief of the Gang of Four has spoken... :-)

N2EY: "Besides, here's a simple, plain fact:

No matter what job, educational level, employer, or
government/military service that a radio amateur has, if said radio
amateur opposes Mr. Anderson's views, he/she will be the target of Mr.
Anderson's insults, ridicule, name-calling, factual errors, ethnic
slurs, excessive emoticons and general infantile behavior."

For examples, see Len's comments above.

>
>
> - Mike KB3EIA -

All right, here's a sample. Remember that these are not the exact
questions on the old tests, and they are for the "entry level"
license:

1. Name the basic units of electrical resistance, inductance,
capacitance, current, electromotive force or potential difference,
power, energy, quantity, magneto-motive force, and frequency.

6. Why is it advisable to use a plate power supply for the oscillator
of a transmitter separate from the final amplifier plate power supply?

20. Describe the adjustment procedure for proper neutralization in a
radio-frequency amplifier using an r.f. indicator coupled to the plate
tank circuit.

26. What is the purpose of a Faraday (electrostatic) shield between
the output circuit of an r.f. power amplifier and antenna coupling
system.

34. A low-drift crystal for the 3500-4000 kc. amateur band is
guaranteed by the manufacturer to be calibrated to within 0.04% of its
specified frequency. Desiring to operate as close to the lower band
limit of 3500 kc. as possible, for what whole-number kilocycle
frequency should you order your crystal, allowing 1 kc. additional for
variation from temperature and circuit constants?

36. Draw a schematic diagram of a full-wave single-phase power supply
using a center-tapped high-voltage secondary with a filter circuit for

best regulation, showing a bleeder resistor providing two different output voltages and a method of suppressing "hash" interference from the mercury-vapor rectifier tubes. Give the names of the component parts and approximate values of of filter components suitable for either amateur radiotelephone or radiotelegraph operation

40. Draw a schematic diagram of two r.f. amplifier stages using triode tubes, showing neutralizing circuits, link coupling between stages and between output and antenna system, and a keying connection in the negative high-voltage lead including a key-click filter.

66. What operating characteristics distinguish the electron-coupled type oscillator with regard to frequency stability?

Just a sample...

You may believe that, but you don't know that. Just because
evidence has not been presented so far that shows he had nothing
to do with the WTC attack, is not an absolute that he had nothing
to do with it. It is yet to be proven if he did or did not.

From K4YZ
>I asked you from what source you made your EXISTING opinion.
From the knowledge gained by attending Ham radio club meetings and Hamfests and asking questions to understand.

The "source" is the current Hams. This is a valid method. This is how prospective new Hams will form their opinion.

I would like to invite someone to a Hamfest or Field Day and see what their opinion is. Lack of females, older population, generally overweight would be apparent upon first visit to a Hamfest. Then, they would notice that Hams are weird.

>Uh huh...I can make brain surgery look really foolish too,

If you did it, it would be foolish.

>The problem is, Vipul, based upon your posts here, you DON'T understand
>Amatuer Radio.

Its pointless to make claims on what one understands. Problem with this approach is that prospective new Hams, particularly EEs, will see Hams as weird and not join.

Then state at what minimum word per minute rate and accuracy level, a
user of Morse Code can be considered proficient, and why. Back it up
with references to any FCC regulation or any US regulation prior to
the formation of the FCC.

Best of luck (because I don't plan on hearing from you on this matter
again).

Sayonara.

From K4YZ
>Do YOU understand that YOU at first say it's unnecessary to test for Morse
>Code then trun around and say it is...?!?!

Actually, Morse code is not needed for HF. Also, the Morse-loving culture of Ham radio makes the hobby look bad. The heavy emphasis on Morse code is embarrassing.

Morsers tend to take over clubs and ruin my enjoyment of the hobby. It is clear many were pressured into Morse code. A few in the club told me they were initially pressured into Morse code.

I was just trying to come up with a compromise that would be acceptable for code lovers.

Tying the General class to Morse code is unfair. The suggestion I made is <more> fair to everyone.

>>For someone that just wants to operate and not learn theory, they wouldn't
>>have
>>to be burdened with the General written test to get HF priveledges.
>
> And then they wouldn't meet the criteria as set out in 47CFR97.1, Basis
>and Purpose of the Amatuer Radio Service.

What? This is an amazingly illogical comment. Morse code is NOT listed in the "Basis and Purpose" of Amateur radio.

>>Anyway, for someone that just wants to operate and not learn theory, this is
>>not much of a sacrifice at all.
>
> It is when you consider the Basis and Purpose of the Amateur Radio
>Service.

One can get a no-code license. One can also pass this test without learning the theory (just memorizing the questions and answers). This seems to satisfy the FCC for now. Are you saying the current Technician class license violates the "Basis and Purpose"?

>
> Me too. On both counts.

Count again.

You'd need three fingers there, Dave.

One finger would be that you're also an EE. Are you an EE?

The second finger would be for putting cicuits together.

The third finger would be for making those circuits work.

Take a stab and guess at what word per minute rate Morse Code use is
considered proficient. Forget about any accuracy standard as I don't
want you to get confused.

Kim:

You have my complete assurance that any of my fellow Americans who freely express their opinions have nothing to fear from me. All they have to fear is what I'll say about them if what they're saying is a bunch of foolishly unpatriotic
liberal malarkey.

>I refer back to your paragraph, above, Larry, and won't even engage you on

>judgement on someone's beliefs when you insinuate that dissent=support or
>agreement with something others may disagree with? If so, do you *really*
>think you are being tolerant?

Of course I'm passing judgment -- and as an intelligent, educated, and informed American, this is a judgment I'm qualified to make! Making judgments is a normal part of the human intellectual process, and one thing I cannot understand about liberals is your stated aversion to being "judgmental" when you, in fact, make some of the most severe judgments about other people that have ever been entered into mankind's historical record.

This is YOUR opinion, and one NOT held by any significant number of
persons with CREDIBLE credentials.

>Day and see what their
>opinion is. Lack of females, older population, generally overweight would be
>apparent upon first visit to a Hamfest. Then, they would notice that Hams are
>weird.

You still have yet to explain to me how Amateur Radio is any more "weird"
than any other sport, pastime or avocation, Vipul.

I can apply the above "demographics" to a Shriner's Convention. SO WHAT?

>>The problem is, Vipul, based upon your posts here, you DON'T understand
>>Amatuer Radio.
>
>Its pointless to make claims on what one understands. Problem with this
>approach is that prospective new Hams, particularly EEs, will see Hams as
>weird and not join.

Uh huh...If an EE is looking for "preety fems" he's going to be very
disappointed for the most part. Most of them are either very young, married or
....uhhhh...."mature". Better he hang out at Hooters.

>Wuoff Hong is NOT typical of Ham radio. It is just one very small segment. I
>apologize.

Well then...well done.

>>>I participate. Just not EVERY meeting.
>>
>> Which club?
>
>Why?

You claim you are active in a club and that you "support" it, yet you show
no understanding of what support is. You claim the club places Morse Code in
priority above all else. I wonder what club it is.

You can keep it a secret if you want, but you see what good keeping YOUR identity a secret was, don't you?

I can. "To be able to competently send by hand and receive by ear Amateur Radio signals using Morse Code without the use of interpretive encoding or decoding devices".

I am Morse Proficient. I can "rag chew", pass traffic or operate in contests comfortably to 25 WPM, and in contests up to 40WPM...WITHOUT the use of a keyboard or any electronic or mechanical encoding or decoding device.

Can YOU, Brain?

I've provided you with a definition of what it means to be proficient.
I'll leave it for you to explain why it would be that when many are
capable of 20, 25, 30, 35 and 40 wpm copy, anyone would consider an
excruciatingly slow 5 wpm as proficient.

> Back it up
> with references to any FCC regulation or any US regulation prior to

Morsers? Your enjoyment? Lots of things ruin your enjoyment of ham radio--clubs, morse code, hamfests, hams' weight, jargon, cults. You should seek out those few remaining TV repairmen. You guys could get together and look at cool wave forms.

> Tying the General class to Morse code is unfair.

To whom?

I see that I've misjudged you, Vipul. I've been attempting to treat you as a rational human being.

Be serious, Larry. No issue can be defined in such polar terms. I oppose our involvement in a war with Iraq, which says nothing whatsoever about Saddam Hussein, much less support for his actions (real, imagined, or inflated).

> (snip) How could they have seen the World
> Trade Center crumble and the Pentagon be
> attacked without thinking that we, as a
> nation, would have to make sacrifices to
> ensure that such a thing never happened
> again? (snip)

Because they, and I, know Saddam Hussein had nothing whatsoever to do with the attack on the WTC. If Saddam wanted to attack this country, he has had twelve years to do so. He hasn't. Indeed, his country is under massive attack at this very moment by the forces of this country and he has still not attacked this country or used weapons of mass destruction. That tells me either Saddam is not as bad as we're being told or he has no weapons of mass destruction. And, if either of those is true, this war is not justified.

You're already confused. You're addressing me about what N2EY wrote.
Good luck on that comprehension problem.

>Because they, and I, know Saddam Hussein had nothing whatsoever to do with
>the attack on the WTC. If Saddam wanted to attack this country, he has had
>twelve years to do so. He hasn't.

You know this as a "fact" Dwight? You know beyond a shadow of a doubt
that SH didn't help fund, support, promote or othrwise give confort or
assistance to those murdering bastards?

>He hasn't. Indeed, his country is under massive
>attack at this very moment by the forces of this country and he has still
>not attacked this country or used weapons of mass destruction.

Again...You KNOW this for sure? There's NO DOUBT in your mind that SH
didn't help as noted above???

And SH HAS used "weapons of mass destruction" on his own people, the Kurds
and Iranians.

>That tells me
>either Saddam is not as bad as we're being told or he has no weapons of mass
>destruction. And, if either of those is true, this war is not justified.

Twelve years of "debate" in the UN and a continuing thumbing of the nose
at UN resolutions and sanctions was all the justification needed.

Sorry for the misunderstanding, Kim. I didn't take exception to anything you said. Instead, a message was posted with my name as the sender which was not written by me. I took exception to that and decided to leave the thread. That now appears to have stopped (at least for the moment), so I will continue with the discussion.

Good Grief, is The Magpie still chirping about Morse proficiency speed? Can't he read?
FCC defined Morse proficiency very clearly long ago. He was told that and still he resists.
He just can't understand the futility of it. Never could.

And it is hoped most Americans have more sense than an eleven-year-old boy. Sadly, Beth Chapman (the writer) obviously doesn't.

She mentioned that she is not here "because Sheryl Crowe, Rosie O'Donnell, Martin Sheen, George Clooney, Jane Fonda or Phil Donahue, sacrificed their lives for me." Perhaps she (Beth Chapman) needs to be reminded that we are also not here because she gave her life for us. Beth Chapman neither treaded "the blazing waters of Pearl Harbor" or stood as a human shield "against the debris and falling bodies descending from the World Trade Center." Nor has she ever offered to lay down her life so "we all may live in freedom." Nor is she included in "the men and women of honesty and integrity that epitomizes courage and embody the spirit of freedom by wearing the proud uniforms of the United States Military." By attacking others with such rhetoric, she only attacks herself (she is "guilty" of same).

I very much disagree. While we're all individuals, we are also a part
of the larger "united" collective, "We, the people." You need only
read the replies to your response to Dan's post to gauge the popular
feeling of "we, the people." That's part of democracy, Dwight.

They're hard to define. I know hams of all shapes, sizes, ages, colors, genders, education, license classes, technical ability, experience, Morse skill, etc. I know hams who are EE university professors and hams who are seventh-graders. And everything in between. Most are really nice folks. Only a few bad apples.

That's one point of view.

But consider the fact that the former Soviet Union was not defeated militarily.
And we're now big friends and trading partners with the People's Republic of
China.

The bloodiest war the USA ever fought was from 1861 to 1865. Americans against
other Americans.

> And there are well informed Americans who disagree with the use of force
>to solve problems. Does that make them less loyal?
>
Of course not.

Pro-war or anti-war, nonviolent protests and demonstrations are a good thing,
because they demonstrate that free expression still exists in the USA. The time
to worry is when differences of political opinion cannot be freely expressed.

President Bush isn't afraid of dissenting opinions. Neither should any of us
be.

Saddam Hussein is terrified of dissenting opinion, and brutally suppresses
them.

What does this tell us?

Amateur Radio Newsline™ Report 1337 March 28, 2003

Amateur Radio Newsline report number 1337 with a release date of Friday, March 28 2003 to follow in 5-4-3-2-1.

The following is a Q-S-T.

Keeping a repeater on the air in New Zealand could become very expensive and Australia considers complete restructuring of its Amateur Radio service. Find out the details on Amateur Radio Newsline report number 1337 coming your way right now

(Billboard Cart Here)

**

RADIO REGULATIONS: NEW ZEALAND MAY START REPEATER LICENSE FEES

Ham radio operators could soon be paying a lot of money to keep a repeater on the air in New Zealand. This as government regulators down-under look at instituting a new license fees that could make keeping a system on-the-air prohibitive for many clubs that sponsor multiple machines. Amateur Radio Newsline's Jim Meachen, ZL2BHF, is in Auckland New Zealand with the rest of this breaking story:

--
NZART stands for The New Zealand Association of Radio Transmitters and it is the official national ham radio society here in New Zealand. It also functions much the same as the ARRL in the United States and is a member of the International Amateur Radio Union.

NZART has received proposals from government telecommunications regulators that could cost hams in this nation a lot of money just to stay on the air. What the New Zealand regulators want to do is go to lifetime licensing with a one off license payment, That's the good idea. But there is more.

Regulators have also proposed fees for repeater and beacon licenses that are just plain unacceptable to NZART or the New Zealand ham radio community. Right now there is no repeater or beacon license fee. Under the proposed revision, there would a NZ$250 initial fee to put a one on the air and an on-going annual NZ $200 charge per system to keep it on the air. Currently the NZ to US Dollar exchange at just under 2 for 1.

The current no fee for beacons and repeaters was introduced some years ago for good reason. This proposal is a very significant policy change with what NZART says are serious and unacceptable implications. This is because, by definition and by international agreement, the Amateur Service is non-pecuniary and by international agreement cannot be used for money-making. Unlike other services

that can pass on costs to others, in the world of Amateur Radio, there are no "others". As a result, the NZART
intends to oppose this one, all the way.

Reporting from below the Southern Cross in Auckland New Zealand, I’m Jim Meachen, ZL2BHF, for the Amateur Radio Newsline.

--

An example of what Jim was talking about? Since each repeater would pay the $200 license fee, a club with 5 systems -- which is quite common -- would be paying $1000 New Zealand dollars every 12 months. (NZART)

**

RESTRUCTURING: WILL AUSTRALIA CHANGE ALL?

The debate in Australia about the need for a new Entry Level license has now been expanded into a call for the review of the entire amateur licensing system. Q-News Graham Kemp, VK4BB, in Brisbane is here with the details:

--

A research report entitled "Amateur radio and the challenge of change" has been co-authored by Jim Linton VK3PC and Roger Harrison VK2ZRH. Here is Jim Linton VK3PC giving a summary report of the Linton-Harrison Paper 2003.

--

(Note: This is an expanded version of what is found in the audio newscast)

VK3PC: “Amateur radio is at the crossroads, it can continue straight ahead down hill and virtually disappear, or set its own path by changing the amateur licensing system.

The time to act is now. When the UK Foundation License was introduced at the beginning of last year, there was not instant support for Australia to take a similar approach. However, some 15 months later there is majority support for a new license in Australia.

What the Linton-Harrison Paper 2003 does is to refocus the debate on the entire licensing system in Australia, the types of licenses, the syllabuses and examinations. We must not be tempted to simply copy the UK Foundation License. It does not meet Australian conditions and needs, and will not provide the necessary sustained growth for amateur radio here.

Australia's new Entry Level License should not be strictly an "operators' license" - a simple permit to use a type-approved transceiver. Entry Level Licensees should be able to enjoy the thrill and satisfaction of operating a radiocommunication system under as many circumstances and conditions and on a wide variety of bands across the RF spectrum as they wish to explore. This should be in keeping with long-standing amateur radio tradition and in line with the ITU definition, which says amateur radio exists for the purpose of self-training, intercommunication and technical investigations.

There will be changes to the licensing system as a direct result of the World Radiocommunications Conference in Geneva later this year where the mandatory Morse code testing requirement is to end.
The amateur radio community and the Wireless Institute of Australia must be ready to take action to revitalize the amateur radio licensing system at the earliest opportunity.

If the right action is not taken, the decline of amateur radio that the Linton-Harrison Paper identifies as being in now its 6th year, will lead to its ultimate demise.

Again, sustainable growth is absolutely essential. It is important to encourage people into the hobby who retain their license and their interest in amateur radio. A hobby that continues to interest, challenge or reward them.

Linton-Harrison advocates a two license system. An Entry Level with a syllabus set at a basic standard, along the lines of the original intention of the Australian Novice license. An Unrestricted License with a syllabus that is revised to comply with the ITU Recommendations for amateur licensing.

The Linton-Harrison Paper describes the current Novice and AOCP syllabuses as being "bloated" and beyond what is expected internationally. The WIA Federal Council agrees.

The current Novice license standard is recognized as being too high. It should not take 40 weeks study to get an amateur license. The Novice license is equivalent to the United States Technician License.

The current AOCP examination is also not relevant to the needs of today, and is at least two decades behind the times. The Linton-Harrison Paper calls for the whole licensing structure, the examination system and syllabuses to undergo a fundamental rethink. In its 8-pages the Paper covers much more than I can in this audio report.

--

Linton and Harrison wrote a similar paper in 1985 that is still being referred to today. (Q-News)

**

RESCUE RADIO: THE PARTNERSHIP FOR PUBLIC WARNINGS DRAFT IS NOW AVAILABLE

Here in the United States as well as around the world, letting the public know that an emergency situation is taking place can save lives. Because of this government agencies as well as the private sector are always trying to find betters methods of issuing alerts.

Now, comes word of a draft document for a new United States national emergency warning strategy from a group called the Partnership For Public Warning. A plan that some say holds the potential to truly modernize the way the public is informed.

For those not aware, the Partnership for Public Warning is a national organization formed in November of 2001. Its Board of Trustee’s include

representatives from every area of public warning communications including at least one radio amateur. The stated goal of the Partnership for Public Warning is to promote and enhance efficient, effective, and integrated dissemination of public warnings and related information so as to save lives, reduce disaster losses and speed recovery.

This document they have released is said to represent the first time anyone has proposed an overall emergency warning strategy for the United States. The concepts outlined help to look ahead to more advanced warning systems than the current E-A-S, weather service products, and other offerings. After reading it, the Partnership for Public Warning invites your participation and comments. You will find it in cyberspace at:
http://www.ppw.us/ppw/docs/nationalstrategy.pdf (GCC, PPW))

**

RESCUE RADIO: S.DAKOTA EMERGENCY COMMS LOOSE TOWER

The town of Mitchell South Dakota has last its 180 foot communications tower used for public safety and public radio. According to Jeff Pierce of the South Dakota Bureau of Information and Telecommunications, the tower fell Tuesday, March 18th after a ground anchor rotted and gave way.

Pierce said it knocked out State Radio communications used by law enforcement and other agencies, though nearby towers picked up that radio traffic. South Dakota Public Radio in the area was off the air until a portable tower was put up the next day but reception of weather alerts will not be possible until the fallen tower is replaced. Also, Mitchell police have not been able to use handheld radios and instead must rely on radios in their cars. A replacement tower should be installed and operational the week of April 1st. (CGC)

**

Break 1

From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including the Montgomery Amateur Radio Club serving Rockville Maryland.

(5 sec pause here)

**

RESCUE RADIO: NJ HAMS RESPOND FOLLOWING PROPANE BLAST

New Jersey radio amateurs were called up following a large propane explosion in the city of Newton the weekend of March 8th. Amateur Radio Newsline’s Ken Locke, N8PJN, has the rest of the story:

--

It was Robert Stepanek, N2TTT who put out the call for more assistance. Stepanek is the ARES District Emergency Coordinator of Susan County who requested assistance in the form of additional operators after a propane tank exploded in the town on Newton New Jersey on March 14th. Hams from several

other New Jersey counties responded.

Amateur radios' primary role was to provide back-up relief shelter communications. Many of the evacuated residents were sheltered by the Susan County Chapter of the American Red Cross.

Pat Day is the Executive Director of that Red Cross chapter. According to Day, about 1000 residents who were forced out of their homes. Those who did not have other places to stay went to nearby shelters operated by the relief agency where some stayed until March 16th. Hams from Somerset, Union, Morris and Hudson
counties volunteered during the emergency.

For the Amateur Radio Newsline, I'm Ken Locke, N8PJN, reporting

--

Rich Krajewski, WB2CRD is the Public Information Coordinator for the ARRL's Northern New Jersey Section and provided most of the information for this story. (WB2CRD)

**

RESCUE RADIO: KILLER TORNADO HITS GEORGIA

Amateur Radio operators in southwestern Georgia have been helping in the wake of tornadoes that hit the region on March 20th. The storms left six people dead and over 200 injured. Georgia's Governor has declared a state of emergency in two of the hardest hit areas.

According to an ARRL Bulletin, ARES was activated in Mitchell, Worth, Lee and Dougherty counties. There, hams have been assisting various relief agencies including the American Red Cross, the Salvation Army and Georgia Baptist Disaster Relief.

ARES members of the Albany Amateur Radio Club also responded. Most of them are Red Cross volunteers. They took emergency response vehicles to the affected areas to feed victims and provide communications.

The ARRL Lee County Georgia Emergency Coordinator is Bob Smith, K4PHE. He says that several ARES members have been volunteering continuously since the tornadoes hit. (ARRL)

**

ENFORCEMENT: NY HAM WARNED ABOUT INTERFERENCE

A Patchogue New York ham has been told that he could face a fine of up to $7500 if he continues to violate the Amateur Service Rules. The FCC's Daryl Duckworth, NN0W, tells us who and why:

--

Duckworth: "Anthony Satornino, N2QPY, was issued a Warning Notice concerning deliberate interference with other licensees' on the 2 meter Amateur band and

engaging in unlicensed operation in the 10 meter band.”

--

Satornino was also asked to clarify his actual address for FCC records and to do so within 20 days. (FCC)

**

ENFORCEMENT: THE FCC VS. K1MAN - AGAIN

The FCC has again written to Maine radio amateur Glenn Baxter, K1MAN, regarding he operates his Amateur Radio station. Amateur Radio Newsline’s Paul Courson, WA3VJB, is in Washington with the details:

--

In its latest letter to Glenn Baxter, K1MAN, the Commission says he has not corrected problems that prompted their letter in January, which was based on monitored information and numerous
complaints to the FCC.

The FCC claims that Baxter’s Amateur Radio station is apparently being used for broadcasting non-ham radio matter including programs, talk shows, and children’s shows. The agency also alleges transmissions from his station are being used for deliberate interference and for communications where Baxter apparently's trying to make money.

The FCC also notes that some of the transmissions start and stop erratically, and leave the air with no identification as required by Commission rules. An enforcement official who wrote the letter said such operation indicates the transmissions are not under the control of a licensed operator.

The FCC goes on to say that the transmissions from Baxter’s station are tape recordings, which themselves wouldn't be illegal, but that in some cases it sounds to the FCC as if the recordings may have been questionably taken from an answering machine and off the telephone and broadcast without full compliance with the law. Enforcement authorities also wrote some of the transmissions are repetitive, apparently for weeks, of the same telephone calls.

Baxter has raised controversy for years with what he portrays as a daily bulletin service on 14.272, 3.972 and 3.890 MHz, prompting interference complaints from sideband and AM communities alike.

Baxter has patterned his program to the style of commercial talk radio, right down to having a toll free telephone number for listeners to call in and chat. The FCC wants Baxter to respond to its latest letter to decide what if anything to do next.

For the Amateur Radio Newsline, I'm Paul Courson, WA3VJB, near FCC headquarters in Washington.

--

This latest letter to Baxter came from Vincent F. Kajunski who is the FCC’s District Director in Boston Massachusetts. Kajunski also directed K1MAN to submit weekly reports detailing certain aspects of his stations on air operations. (FCC)

**

ENFORCEMENT: ALASKA BROADCASTER FACES FINES $137,000

A Christian broadcaster is facing up to $137,500 in fines for alleged wetlands damage on Alaska’s Kenai Peninsula. Fred Vobbe, W8HDU, of the National Radio Club’s D-X Audio Service has more:

--

The Anchorage Daily News reported on March 13th that Alexander Kozned of Ninilchik poured gravel and other fill into about three and a half acres of protected wetlands, as well as a stream and intertidal zone that drains into Cook Inlet.

The charges against Kozned come in a complaint filed this month by attorneys for the United States Environmental Protection Agency. The alleged violations are reported to have taken place during the summer of 2002 on Kozned's property a few miles north of Ninilchik. That’s a location where he reportedly wants to install a broadcast antenna array to broadcast religious programming to Russia and China.

An attorney for Kozned said the area affected is less than a tenth of an acre and that volunteers, not knowing about the wetlands, made an honest mistake. He also claims that the EPA's reaction amounts to overkill.

But officials at the federal agency said Kozned knew of the wetlands and filled them without a permit, despite a 1998 warning. The E-P-A and the U.S. Army Corps of Engineers issued cease-and-desist orders at that time after discovering that Kozned used earth-moving and road building equipment on wetlands to build antenna pads. The E-P-A ordered Kozned to restore and revegetate the wetlands he harmed. Kozned complied and was not fined in that case.

For the Amateur Radio Newsline, I’m Fred Vobbe, W8HDU.

--

The charge marks his second run-in with federal environmental regulators. (Anchorage Daily News)

**

BREAK 2

This is ham radio news for today’s radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

EMERGING TECHNOLOGY: A NEW KIND OF POP UP SPAM

As if junk e-mail and pop-up ads weren't annoying enough on their own, now there's pop-up junk e-mail. This, as the result of a developer of bulk-mail software has figuring out how to blast
computers with pop-up spam over the Internet through a messaging function on many Windows operating systems. Amateur Radio Newslie’s Bruce Tennant, K6PZW, is here with more on how it works:

--
The software is called DirectAdvertiser. The company that developed it is reportedly based in Romania. In recent weeks, Internet users have reported receiving pop-up messages such as one touting university degrees without classes or books.

DirectAdvertiser does not hack into computers. Rather, it
uses a part of the Windows operating system called Messenger. It comes turned on by default with many Windows systems including 2000 and XP. Its meant for system administrators to broadcast service notices and should not to be confused with the various other instant messaging programs.

DirectAdvertiser was first reported by Wired.com, and appears to represent the latest attempt to bypass the increasingly sophisticated e-mail spam filters employed by leading Internet service providers and individual users. It also appears to circumvent federal and state laws designed to curb junk e-mail.

For the Amateur Radio Newsline, I’m Bruce Tennant, K6PZW, reporting

--

There is one major fault to DirectAdvertiser that makes it easy to beat. To receive the pop-ups Windows Messanger must be turned on. If you don’t want to get them -- just turn Messanger off. (OnLine Technology)

**

HAM RADIO IN SPACE: AMSAT SPACE SYMPOSIUM SEEKS PAPERS

The 2003 AMSAT-NA Annual Symposium, scheduled for October 17 to the 19th in Toronto Canada has put out its first call for papers to be presented at the event. The subject matter should be of general interest to amateur radio operators involved in satellite communications.

Papers may be presented by the author during the Symposium or simply offered for inclusion in the Symposium Proceedings publication. A brief abstract of the proposed paper should be submitted as soon as possible. The final date for abstracts is June 15th with copy ready papers must be received no later than August 15th. Electronic submittal is preferred in Microsoft Word format. E-mail electronic submittals to Wayne Chandler at ve3whc@amsat.org (AMSAT)

**

INTERNATIONAL - AFGHANISTAN: NEW KANDAHAR RADIO STATION TO BE LAUNCHED

On the international scene, the Boston-based N-G-O Afghans for Civil Society has announced that former BBC producer Akhtar Kohestani will serve as station manager for Afghan Independent Radio or A-I-R. This is a new station which is to be launched this spring.

A-I-R will be the first independent radio station to be based in the former Taliban stronghold of Kandahar in southern Afghanistan. Plans are under development for program sharing with the BBC, Radio Free Europe, Radio Liberty, the Voice of America and Radio Afghanistan. (Stewart McKenzie)

**

INTERNATIONAL - POLAND: NEW BANDS FOR SP HAMS

Also, SP5HS reports that Poland’s new national frequency allocation table came into effect on February 27th and its pretty good news for that nations hams. The new rules allows S P amateurs to use the 136 kHz band, while the 50 MHz band is now allocated to amateurs in Poland on a secondary basis. 6 meters is still shared with government services. (GB2RS)

**

BEACONS: 2 METER K7XC/B ON THE AIR FROM NEVADA

A new 2 meter propagation beacon is on the air from the state of Nevada. Amateur Radio Newsline’s Don Wilbanks, AD5DW, tells us who put it on and where to find it:

--

Tim Mareck, K7XC reports that the 2 Meter beacon operating under is call sign is now installed at it's new mountain top home here in grid square DM-09. Tim says that its on 144.288 MHz and operating from 4900 feet atop Lahotan Peak. This is above the Lahotan Reservoir near Silver Springs Nevada. Currently, the beacon consists of a 10 watt C-W transmitter into a single K-Q Loop at the 30' level on the tower. If you hear it, you can be pretty sure that 2 meters is open to Nevada from where ever you are.

Tike adds that the next project is a 6 meter beacon from the same site. It will use a Yaesu FT-620B running at 10 watts into a old style KB6KQ loop. This antenna will be placed 2' above the 2 meter loop on the same mast. Tim's target date to complete this phase of the project? He says hopefully sometime in June.

--

Again, the frequency of the K7XC beacon is 144.288 MHz. If you hear it you can send Q-S-N reports to Tim by e-mail at timm@cccomm.net (VHF Reflector)

**

DX

In D-X, six German operators will be active as A-35-X-M from Tonga to the 4th of April. They will concentrate on working Europe. More information is at www.df3cb.com/a35xm (OPDX)

And Tim Totten, N4GN, reports that all Oh-J-one thru Oh-J-8 QSL cards for W-R-T-C 2002 have been printed and ready for release. If you want to obtain your QSL cards directly, send an S-A-S-E before April 15th to Toni Linden, OH2JTE, Ohratie 16E218, 01370 Vantaa, Finland. Tim also says that plaque and T-shirt and Early Bird submission winners can be viewed at the following site. Its out there in cyberspace -- at www.n4gn.com/wrtc. (N4GN)

**

THAT FINAL ITEM: YHOTY 2003 NOMINATIONS SOUGHT

And finally this week, the nominating season for the 2003 Young Ham of the Year Award is now open. Our producer, Bill Pasternak, WA6ITF, is here with the details:

--

Each year, we at the Amateur Radio Newsline join forces with Vertex-Standard and C-Q Magazine to honor the accomplishments of a young radio amateur who has contributed in some special way to the hobby or to society through the hobby.

The rules are still the same. A nominee must be age 18 or younger, hold any class of Amateur Radio license issued by the FCC and live in the contiguous 48 states. And this year, thanks to Kevin Boudreaux, N5XMH, its easier than ever to file a nomination.

Kevin was the 1993 Young Ham of the Year award winner. He has now created a new on-line home for the award that has all the information, rules and downloadable forms needed to submit a nomination. And Kevin has taken it a step further. He has also created our first-ever fill in the blank on-line nomination form. Just provide the information on-line, click at the bottom of the page and your nomination is on its way to us.

After you finish filing your nomination, please click on some of the other pages and take a look around. You will find it in cyberspace at www.yhoty.org/2003.htm . There is also a link to it from our website at www.arnewsline.org . Printed forms are available for an SASE to the Young Ham of the Year Award, 28197 Robin Avenue, Santa Clarita California 91350.

--

Our thanks to Kevin Boudreaux, N5XMH, of Dynamic Marketing for taking the time to create this new website. He is one Young Ham of the Year who is still an important part of the award. (ARNewsline™)

> excruciatingly slow 5 wpm as proficient.

If the criterion is slowness, then you have a problem. Some consider
20wpm slow. Is 20wpm not proficient?

FISTS says accuracy transcends speed.

You said 20wpm was "more proficient" then 13wpm. But did not say
13wpm was proficient. You have not stated the lowest wpm rate at
which "proficiency" is achieved.

> > Back it up
> > with references to any FCC regulation or any US regulation prior to

Not at this time.

The US government doesn't even have a definition of Morse Code in the
very regulations that use that term.

But if you can drag out a 1912 Dept of Navy or some other such agency,
then I'll accept it.

> > Best of luck (because I don't plan on hearing from you on this matter

No you haven't. You said that 'this speed is more proficient then that
speed.'

If 20wpm is "more proficient" than 13wpm, are you saying that 20wpm is
the lowest speed considered proficient?

Hmmm...In my 2002 Ford Ranger, I am using a 2M/440 Larsen through-the-glass antenna on the rear window left side, and a 220mHz Larsen through-the-glass antenna on the right side of the rear window. The mag-mount Delphi satellite antenna cabling was routed through the third brake light hole above and to the middle - inbetween these two antennas.

Keying up to 45W on either 2M, 220, or 440 has no detrimental affect on the Delphi's reception.

WELL SAID, Bill!

In fact, even "mainstream" activities are weird to some. For example, shirtless (male) football fans with their bodies painted in "their" team's colors - in subfreezing weather.

--

btw, ARRL now has a line of clothing with the ARRL logo and optional callsign and name embroidery. Gotta get me some, particularly a hat - hamfest season is coming up fast!

Source record: 63730

At events people say I eat a lot. I disagree, but more than once someone has said this to me. In college my meal plan ran out because at lunch I may have ate too much. Actually, I ate a normal amount of food - they overcharged for food, so the meal card ran out. At relative's wedding or other family events that have food out and the possibility of eating throughout the day, I make many trips to the food table. I am snacking while writing this.

At a buffet in Las Vegas, I filled my plate. At a Hamfest where they had a buffet, I ate enough. At Thanksgiving, I was very thankful. Also, I have made many trips to <more than one> Chinese food buffet.

I met with one of the people that I went to Vegas trip with at another event. Not seeing what I had ate, he asked if I ate enough food. For some reason, he assumed I ate a lot. I was surprised and did not expect him to ask me that.

I am also a "food snob". I like fine dishes. I appreciate Quiche. Also, one of my hobbies is cooking.

If the food place chosen by the radio club is not good, I complain. The after club meeting dinner place was a restaurant. Most Hams got pizza. I ordered off the menu. The restaurant had lousy tasting food. I couldn't believe how bad the food at this restaurant was. Even the pizza tasted lousy. Nobody complained, although I said the food stinks. I guess the club members were happy the restaurant had enough seating, they did not complain the food was bad. Often Hams will settle for lower quality food.

Not surprisingly, the restaurant went out of business, and the radio club had to choose another place. By chance, the new food place was better. The pizza, which was now delivered to the club, was good.

Last year, before Field Day, the club met at another restaurant. It was better than the monthly club meeting restaurant, but nothing special. This year, at club meeting they asked if someone would handle the arrangements for the dinner place before Field Day. I volunteered. This way, I know the food place will be good. Who says I did not help out for Field Day?

At work, one outside sub shop place had a double-sized large sub (imagine 2 large subs). They delivered to my job. Most people ate half of it and saved the other half. I saw one of these. Next day, I bet my manager I could eat a whole <double-sized large> sub. I chose the Italian sub. The sub came, and it was fully stuffed, and double-sized large sub. I ate the entire sub.

In summer, on the way home, I often made a stop at Dunkin Donuts for a Coffee Coolatta. The reason was because it was so hot, I needed something cool to drink. Once a week, with a coworker (also a Ham), I visited Starbucks and had a "tall" size (their smallest size) coffee. Cream and sugar please. With the coffee, I often had cookies or some other sweet.

I often would stop at a fast food place and eat a "meal" in the car. Then, I would eat another meal at home. If I eliminated the 1st dinner meals and pricey coffee of those years I would have much money left. I could use it to buy another rig!

> To whom?

To me. If I were to mention I belonged to a Ham radio club and the person asked me if they still used Morse code.

Its also bad for the hobby. It scares away the technical people, who might have benefitted the hobby. It looks bad for the hobby when the only "real" skill is Morse code.

>The Radio Police dragged themout in the street in the middle of the
>night and tortured them until they signed statements professing thier undying
>loyalty to Morse Code.

No, but from talking to club members, at least two (one is club Prez!) said they were resistant to learning Morse code, but claim to like it now. I guess social pressure works.

>Vipul, you recommend trashing the technical written tests and then say MY
>comments about that suggestion then failing to meet Part 97 is
>"illogical"...?!?!

It seems you don't understand my proposal. I did not reccommend trashing the technical written test.

I said keep written tests, but put Morse code out of pathway of written tests. No need to pass Morse code test to get General license or Extra license.

But, no HF for passing only written tests. If one passes code test (provided they pass tech written test) they can get on HF.

This compromise should satisfy Morse code lovers and no coders.

Do you understand this or do I have to draw a flowchart?

In NY City you can NOT do your own electrical wiring.
In any location, any electrical work is (theoretically) subject

to inspection...although much home done work is never
inspected.

> >It can be a transmitted signal into public space that exceeds

RF exposure questions are technical questions.

CB.

And the user of that equipment is never cited for
any signal problems (unless it can be shown that
the user illegally modified the CB, etc.)

Each of these specified services does NOT allow any modified
equipment to be used. All equipment is FCC spec'd.

> Does anyone really think that the current writtens test for all the info a
ham
> needs to insure that his/her transmitters meet all FCC requirements?

Probably not, but it does create the underlying responsibility
and avoids ay opportunity to say the FCC doesn't
create the setting that makes hams responsible for their
transmissiions.

> >To allow a non-technical

The figures quoted on imported oil are net imports, which is calculated by subtracting exports from total imports. So if all oil produced in the USA were used here, we'd still need to import about half of our total use.

>What about the thousands of
>oil well rigs across the country pumping out oil etc. on a daily basis?

Not enough to meet the demand. Look at the webpage Dennis Ferguson pointed out - gives production figures by state and total consumption figures.

Think of all the things oil is used for - gasoline for autos and light trucks, diesel for trucks, heavy machinery, ships and railroad locomotives, jet fuel, aviation gasoline, kerosene, home heating oil, bunker oil, lube oils, paints and thinner, plastics, blacktop/asphalt, etc., etc.

>Oh... and this one I love, most of what is coming out of these wells as a
>by-product or waste product is being (at least here in Michigan) upped
>thirty percent when it is something that the basically get for free!

I'm not sure what you mean by "byproduct" or "waste product". Natural gas is in great demand.

> Hmmm
>propane and gas for heating is going up that much around here....

Supply and demand.

And it costs big money to drill the wells, extract the usable product, refine it and ship it to where it's needed. Some wells never produce enough to even pay for their drilling cost, so other wells must make up the loss.
>
>There's enough oil underneath us to last longer than even our grandkids
>would need to worry about....

How do you know?

One of the problems with domestic oil production is that much of the "easy" oil is gone, and what remains is difficult to extract and not easy to refine. Often the price of foreign oil (including shipping) is less than the cost of domestically produced oil.

How much more are you willing to pay for a gallon of gas, diesel or heating oil in order to buy 100% American?

>but our big oil corporations are working WITH
>OPEC in my own opinion, not against them.... Can't prove that but I bet I am
>not too far from the mark on that one...
>
Actually it's a complicated game of supply, demand, transportation cost, refining cost, product quality, etc. Add to this the fact that in some foreign countries the total extraction cost is as little as $5/barrel, so they can underprice almost anyone and still make huge profits. Back in 1990, when Iraqi and Kuwaiti production basically disappeared, the Saudis and others made up the loss AND kept the world price down.

I don't know what you're paying for gasoline in Michigan, but here in EPA a gallon of regular is under $1.70. Twenty years ago, the price was about $1.40. Petrol-based fuels are so cheap and plentiful in the USA that most people simply don't see the need to reduce their usage.

Here's just one example: For more than 25 years, VW and others have made practical diesel cars that get much better mileage than their gasoline counterparts. But unless you drive a lot of miles, the cost difference is hardly worth it. If a diesel car gets 40 mpg and the equivalent gas car gets 25 mpg, and the diesel car costs $1000 more to buy, and the price of gas and diesel are identical at $1.70/gallon, it will take more than 39,000 miles just to break even.

>I think it was also Larry that stated that no peace has ever been achieved >without war. He needs to learn of the success of India's entrance into a >free nation....

Not the best example, Kim.

It's true that India got its independence from the British Empire without a war. Ghandi & Co. used nonviolence to make the Brits realize that keeping India would require more repression than the Brits (being basically decent folks) could stand. Also, after almost six years of world war to preserve freedom, the British were not going to force countries to remain British subjects if they wanted independence.

But soon after the British left, India erupted into violent, bloody civil war and ultimately split into two (now three) countries, two of whom are still fighting over boundaries (Kashmir isn't a sweater). How many died in that war, and in the fighting that still goes on after more than 50 years?

South Africa got its independence from the Empire about the same time as India - and promptly enacted apartheid, which was much harsher and more repressive than anything the British ever did in South Africa.

Social pressure has nothing to do with it. There are numerous instances in all kinds of activities where a person did not want to do something but was forced to learn it and after they used it found they actually enjoyed it. People resist the unfamiliar even when it is beneficial. The more unfamiliar it is, the more they resist it.

In college, I absolutely hated computer programming but it was a required course. Later, I came to enjoy it and deliberately sought out positions where I could employ this skill. I would never had done so if not required to take programming as part of my degree studies.

I have many friends who were required by their parents to take piano lessons. So far every one of them has made one of the following statements depending on whether they quit the lessons or not.
"I'm glad my parents didn't let me quit." OR
"I wish my parents hadn't let me quit"
All of them, whether they quit as kids or not, valued it as adults.

One could make lists ad nauseum of cases where a person was required to learn something that they thought they would hate but were glad afterwards that they had studied it, even though it was against their will with social pressure having nothing to do with their change of opinion.

This is why I continue to believe that only those with a background in a subject are qualified to judge its worth and usefulness.

I don't understand what you are trying to say there. Do you actually
think the gas from an oil well is "free"??? Why is it any more free
than the oil?

>There's enough oil underneath us to last longer than even our grandkids
>would need to worry about.... but our big oil corporations are working WITH

Well, if you know where all that oil is, you really should start up an
oil company. Nobody else knows where it's at, and you'll be about as
rich as Bill Gates in less than a decade. If you are telling the truth,
that is. Of course, you aren't, so it won't happen.

>OPEC in my own opinion, not against them.... Can't prove that but I bet I am
>not too far from the mark on that one...

Well, lets hope they are. How else would they buy oil from them?
Or did you mean something else?

>(snippage)

Fact? What else would you call it, Steve? More than two years after the WTC attack, no evidence has been presented to even suggest anything other than what I said. Do you have that evidence? We're attacking a country and killing many thousands. More than rhetoric is required to justify that.

All true. But the fact still remains that no license is required (except in
NYC) and in most cases no inspection will ever happen. In the case of appliance
repair, no license or inspection.

The point is that it is NOT government's job to protect people from their own
electrical stupidity, whether they be working on radio transmitters or toaster
ovens. The reason for things like the NEC and FCC are to protect innocent third
parties from such stupidity.

Of course - and earlier in my argument I specified that the test would have to
have just enough theory questions to show that the licensee understood the
rules.

As it is right now, a person can get all the RF exposure and electrical safetty
questions on all three ham tests wrong and still pass. FCC doesn't think
there's a problem with that.

I have an Icom 2100 using a Larsen 5/8 wave mag mount about 4 inches
from my Delphi SKYFI antenna in the center of the roof. The SKYFI is
mounted in the car about two inches from the Icom, and plugs into the
aux cigar plug. The Icom is direct wired to the battery. I've had
lengthy 2 meter QSO's at 25W with the SKYFI on and have noticed no ill
affect on either unit. I haven't upped the power to 50W yet to try it,
but I rarely use full power.

By the way, I drive a 2001 Isuzu Rodeo.

You already made this argument before.

Anyway, visceral realtime encoding/decoding is fun, I know. Potential fun is
not the only reason to consider.

Morse code is irrelavant to what I want to know, so I don't want to make the
effort. It also shows misplace priorities. More importantly, I don't like Morse
code. I could be doing much more interesting things in its place.

>This is why I continue to believe that only those with a background in a
>subject are qualified to judge its worth and usefulness.

Emotional ties to the mode is not a reason. Knowledge of the <Morse code>
encoding scheme is NOT required to evaluate its usefulness.

There are people with the background that are well qualified to judge its
usefulness, such as comm profs.

Other modes have been shown to be more BW effiecient. Morse has not been used
for emergency comm. by those that have emergency comm needs. Morse code does
not hold out in the worth and usefulness allocation. Its emphacis is very out
of proportion to its usefulness.

Jim already told you that he considers that point to be ten words per
minute. That answer didn't suit you. I placed the level somewhat
higher. That answer didn't suit you. We know that there are numerous
ops who are comfortable with 20, 25, 30, 35, 40 wpm. There are some who
can operate at much higher speeds. If you choose to delude yourself
that someone whose maximum speed is five words per minute is proficient
in morse, so be it. I've give you the definition of "proficient". I
don't consider the 5 wpm level to be "skilled" or "expert".

> > > You merely type words.
> >
> > That seems to have been what makes up your response.

> Back it up with anything from the FCC. Anything at all.

The FCC is not in the business of determing morse proficiency. In
recent years, the FCC is barely in the business of testing radio
amateurs. It is only within the past few years that the FCC has started
to once again address the enforcement of amateur regs.

Sure, twenty wpm is proficient. Thirty wpm is more proficient than
twenty. Forty wpm is more proficient than thirty.

A batter who hits 385 is good. A batter who hits 405 is better. A
bowler whose average is 240 is good. A bowler whose average is 265 is
better. Are you having a problem with the concept?

Now you are embarrassed of us?

Maybe there should be an top ten Embarassment list based on the age and
percetion of how outmoded a mode is. In order of how embarrassed you
should be:

10. EME - Folks, this has been done once, so who cares any more?

09. Satellite comms - We've been doing this since when, the
60's?
08. Spread Spectrum - Hey, Hedy thought this up around 60 years
ago!
07. SSB - Yawn... Major old school. I 'll bet all those swl'ers
think that hams are trying to imitate Donald duck.

06. FM - Need we say more, you repeater rats?

05. PSK31 - Can't even imitate a half decent chat room.

04. SSTV - Hams have the nerve to call this TV? It's one
picture, for crying out loud. ANd now that you have a sound card
to do all the hard work, it doesn't take any skill anyway!

03. ATV - Silly amatuers, trying to compete with "Survivor and
American Idol!

02. Hellschreiber - Givr me a break! Its a mode where I'm
embarrassed to even say the name, and it was used by people of
ill repute a long long time ago. Why anyone would use it any
more is beyond me!

And now, for the most embarrassing communications mode ever
foisted upon the world, and the practice of which should make
all right thinking hams hang their heads in shame, and then

gallop off the nearest cliff like lemmings.............

01. Morse Code! This dog of a mode, when practiced more than once, has
been know to erase all your credit cards, cause your dog to become lame
and ill tempered, cause you to become cranky and ittitable. cause you to
gain weight and swing funny looking sticks around, and wear the same
clothes for weeks!

> Its also bad for the hobby. It scares away the technical people, who might have

Every mode has it's advantages and disadvantages. For example, yes PSK is more bandwidth efficient but the signal is so narrow that unless you know exactly where the signal is, you can't find it. Not very useful in an emergency in that case. One could address each and every mode from voice through CW through every single digital mode and find that every one of them has both advantages and disadvantages. The point should be to keep them all in use as differing conditions will favor one mode over another.

There are only two modes that don't require a computer in the system: voice and CW. Therefore these form the basic communications modes of radio and

should be part of every ham's fundamental knowledge in the field of radio.

The first World Trade Center attack happened in 1993. All but
one of the perpetrators have been tried and imprisoned. [one
was never caught]

Iraq has regularly disobeyed United Nations resolutions since
the cessation of the first Gulf War in 1991. Iraq has remained a
threat to Middle Eastern stability since the Iran-Iraq War of 1980
to 1988.

It should be noted that Iraq invaded Kuwait in 1990, not for any
peaceful expansion of its liebensraum. The USA-led coalition
did not pursue Iraqi forces at the cessation of hostilities in
1991. Events over the next dozen years seem to indicate that
the coalition should have continued all the way into Iraq then.

This second Gulf War is really a resumption of the first one
that wasn't fully completed.

INCORRECT.

The total number of deaths (Union and Confederacy) in the American Civil War was 219,939 in battle. The total number of battle deaths during World War 2 was 292,131.

Battle deaths are considered "bloody."

Total number of casualties in the American Civil War were 646,392, including 281,881 wounds not mortal. Total number of casualties of all US military branches in World War 2 were 1,079,162 including 671,846 wounds not mortal.

All of that happened before N2EY's time. It is history. Please try to be factual when admonishing others.

I differ. Amateur radio is basically a hobby, a recreation. It is
NOT a guild, craft, union, or other organization requiring working
to professional skills and responsibilities.

The "social pressure" is that exerted by long-timers who have
taken it upon themselves to self-righteously assert their rank
and status as knowing what is best for amateur radio entrance
requirements and the attendant privileges of licensing.

Morse code skill is required to be demonstrated by test to
obtain a US amateur radio license having below-30-MHz
privileges. That is a regulation which the US radio regulating
agency does not agree with for licensing but is required to
be kept due to honor the ITU membership.

>In college, I absolutely hated computer programming but it was a required
>course. Later, I came to enjoy it and deliberately sought out positions
>where I could employ this skill. I would never had done so if not required
>to take programming as part of my degree studies.

Irrelevant. In my degree studies, there was NO such thing as
computer programming in the electrical engineering curricula.
It was not available, therefore there was nothing to either "hate"
or love. Despite that, many of us engineers, myself included,

learned calculator and computer programming LATER to use
as a valuable tool in engineering. Today, computer programs
are part and parcel of engineering design in all disciplines of
engineering.

You bring up an old, trite "argument" about the "necessity" to
study something disliked because it is "valuable later."

The FCC publicly stated in 1990 and again in 1999 that morse
code testing is not worthwhile for their purpose of regulating
radio to determine if an amateur radio license applicant should
be granted a US amateur radio license.

Also, the FCC does not mandate morse code on-off keying
mode over and above all other allocated modes, any class
license. There is no logical reason, ONLY long-timer peer
pressure, to keep morse code testing for amateur radio.
The ONLY valid reason is simple peer pressure.

>I have many friends who were required by their parents to take piano
>lessons. So far every one of them has made one of the following statements
>depending on whether they quit the lessons or not.
>"I'm glad my parents didn't let me quit." OR
>"I wish my parents hadn't let me quit"
>All of them, whether they quit as kids or not, valued it as adults.

This is not a musical interest newsgroup nor are music
lessons of any kind applicable to amateur radio.

>One could make lists ad nauseum of cases where a person was required to
>learn something that they thought they would hate but were glad afterwards
>that they had studied it, even though it was against their will with social
>pressure having nothing to do with their change of opinion.

The converse is ALSO true...of "lists ad nauseum of cases" where
disliked studies were NOT useful later in life, outdated, had no
purpose whatsoever.

In US engineering schools, three semesters of The Calculus have
been required for years to fulfill a degree. Do they serve any REAL
purpose in engineering? There's considerable negative thought on
that among those who made a career in engineering. In my case
of having electronic design responsibility since 1962, I've used
elementary Calculus 1 just twice...Analytical Geometry techniques
two more times...and all of them after rising to more senior
postitions requiring report writing. None of the "advanced math"
was required for actual design engineering work, only for written
reports done after the design work itself was completed...to
satisfy corporate readers who were not even in the responsibility
loop for the projects in question.

In February 1953 I began my US Army assignment at Army radio
communications transmitter station ADA. ADA then had 36 high-

power transmitters (quantity raised to 43 by 1956) on HF and most trans-Pacific communications circuits ran 24 hours a day, 7 days a week. Back 50 years ago NO morse code modes were used on HF for area headquarters communications which needed a throughput of 220 thousand messages a month. At the same time there were some military communications modes requiring morse code operating skill but those were waning skills that were all but defunct by a decade past.

>This is why I continue to believe that only those with a background in a
>subject are qualified to judge its worth and usefulness.

I have a background in communications that began 50 years ago. I've legally transmitted on frequencies from VLF to 24 GHz, including MF and HF portions. I also have a background that began with vacuum tubes and not-yet-ended with transistors and application-specific integrated circuits. Nowhere would I mandate that everyone should use only vacuum tube based radios or just HF for international radio communications. That old idea is ludicrous in light of the accomplisments in the wider other world of radio communications.

I don't presume to speak with authority on morse code skill. I CAN speak with some authority on radio communications from experience, knowledge, and various skills other than morse code. The rest of the radio world has either dropped morse code as a primary mode or never considered it when a radio service began.

I DO think it is equally ludicrous to demand that all amateurs must meet a skill test of any kind in manual morse code in order to be granted a license having below-30-MHz privileges.

The "code elimination question" is concerned only with the amateur radio license test viability. It isn't about "having to study something 'hated' which then magically transformed to something of great value or enjoyment later."

Peer pressure from old-timers in amateur radio is considered to be the ONLY valid reason to retain the morse code test for an amateur radio license. For that reason I've suggested that all the PCTAs strike for a change of the title of Part 97 to be the Ancient Radiotelegraphy Society.

Lots more "mileage" on the Lieder of the Gang of Four.

It's become a standard "reply" to anything that detracts from
the Gang's accomplishments, status, rank, privilege and ego.

>>
>> You don't have a right to know.
>
> Sure I do. YOUR rules. If you post something to a public forum, it
>becomes fair game.

You still don't have any right to know.

The subject is ARS License Numbers, not Steamy Robeson's exhorting of his wounded ego and demands for answers.

>>This isn't a newsgroup for NASCAR or aircraft competition or about
>>equine interests
>
> I'm sorry. If forgot that only YOU may make an analogy or designate
>what is and is not proper for discussion.

This still isn't a newsgroup for NASCAR or aircraft or equine interests.

> Many pardons...NOT!

Neither is Steamy the warden or governor who can pardon anyone.

>>Except to the Gang of Four.
>
> Who? In what Amateur Radio publication will we find this "gang of four"
>you make reference to?

In this newsgroup the Gang of Four is K8MN, K4YZ, K3LT, and N2EY.

All four use antagonism, aggressive sarcasm, and very misplaced
misappropriated analogies to attempt battering everyone else
into submission and capitulation to their own viewpoints on any
subject.

>>US amateur radio is all about Working DX on HF with CW.
>
> I'll go ahead and put this in the "List of things Lennie the Liar Will
>Never Answer", but WHO said this (otehr than you) and WHERE is it published?

It is de facto, not de jure.

>>Not very engineer like, Vipul.
>>
>> Here we go again! Doctor Kildare II, having "worked in engineering,"
>> knows Everything about engineering!
>
> Nope. Just know enough to know what's expected of an engineer.

Nonsense. Robeson spent time filling out purchasing
requisitions, talking on the telephone, doing NO engineering
tasks, no design work, no drawing sign-offs, having NO
engineering responsibility.

>>Yes, a half-year as a PURCHASING AGENT...(SNIP)
>
> Once again, half cocked and ill-prepared, Lennie launches off on yet
>another windmill assault.

Steamy wants to bluff his way through by misdirection.

By his own admission he was a PURCHASING AGENT. NOT
a designer of anything, NOT involved in electronic design, NOT
anything but someone who did purchasing.

Steamy has NO experience or knowledge of engineering of
anything.

>>Not a long "career" in "professional radio," was it?
>
> If that was my only professioanl experience, you MIGHT be right. As
>usual, you only ahve half the story. But that's OK...you go right ahead.

Tsk, tsk, tsk...evidence of RAGE in typing again. :-)

The purchasing agent job was Steamy's ONLY experience even
close to engineering. Not IN engineering, just on the periphery.

That single job still didn't last long. Wonder why? :-)

>>The club you try to hit everyone with when they don't honor, respect, or
>> salute your mighty accomplishments.
>
> Which club would that be, Lennie?

The Ancient Radiotelegraphy Society.

>Every mode has it's advantages and disadvantages. For example, yes PSK is
>more bandwidth efficient but the signal is so narrow that unless you know
>exactly where the signal is, you can't find it.

Not true. The signal can be as broad or narrow as selected by
the receiver in-use. It just doesn't sound like on-off keyed CW.
:-)

>Not very useful in an emergency in that case.

Is US amateur radio devoted to "emergency communications?"

I don't think so. [be careful with what you use for replies...]

>One could address each and every mode from voice
>through CW through every single digital mode and find that every one of them
>has both advantages and disadvantages. The point should be to keep them all
>in use as differing conditions will favor one mode over another.

On which bands? :-)

US amateur radio allocations haven't yet been made at bands
lower than 160 meters. Have you forgotten the old 500 KHz
International Distress Frequency? Quite a bit below 160m.

Of course, the maritime world has shifted to their GMDSS' much
higher frequencies. Did so a few years ago. The USCG doesn't
monitor 500 KHz anymore.

>There are only two modes that don't require a computer in the system: voice
>and CW.

Not quite. RTTY worked for decades without a single computer
being needed. So has ATV and SSTV.

>Therefore these form the basic communications modes of radio and
>should be part of every ham's fundamental knowledge in the field of radio.

There's no separate skill test for voice communications for a US
amateur radio license, any class. There's never been one of
those, not in 91 years of four US radio regulating agencies.

From: "Dee D. Flint" deehays@qix.net
>You aren't qualified to judge whether it is irrelevant or not.
Knowledge of the encoding scheme is NOT needed to evaluate its usefulness. You don't know my background to say I'm not qualified to judge Morse code's usefulness.

>Experience in its use is the only
>way to judge it's usefulness.

Please realize that you can seperate the acutal memorization of the encoding scheme from its mathmatical analysis. Knowledge of the encoding scheme is NOT needed to evaluate its usefulness.

There are other ways to gain the experience needed to evaluate Morse code's usefulness.

Those that have the experience have not reached the conclusion that Morse is so useful, as many Hams claim.

>> There are people with the background that are well qualified to judge its
>> usefulness, such as comm profs.
>
>And some of them come down on the pro side of the debate.

Like which Prof? Name please. What reason did this Prof give for usefulness of Morse?

My Comm Theory Prof (also licensed amateur) apparantly does not agree. Many modes with performance tradeoffs given. Not ONE mention of the usefulness of Morse code. How about I ask my Comm Theory Prof?

Hospitals, firefighters, Coast Guard, Pilots, Military, other "emergency" functions do not use Morse code.

>There are only two modes that don't require a computer in the system: voice
>and CW. Therefore these form the basic communications modes of radio and
>should be part of every ham's fundamental knowledge in the field of radio.

Just because a mode does not require a computer, does not mean one should learn it.

>Maybe there should be an top ten Embarassment list based on the age and
>percetion of how outmoded a mode is.

Interesting idea, but Hams should be skilled at all useful modes. That includes the modes you mention.

Morse code is known to be obsolete, not useful. Advertising Hams use Morse code to the non-Ham public would not make Ham radio look good.

>I am an extremely technical person. It didn't scare me away.

Good for you.

>What priveleges would a person get from passing just the writtens?

A Technician class license get almost the whole amateur bands, just like they do now.

More bands for General and Extra class is not possible, as the Tech class got all the bands up front. We can't take away bands from those who already have them to make things more "fair" for everyone.

The General and Extra classes get they extra "prestige" of getting those licenses. Before you say "What good is prestige?", remember that Extra class right now offers basically the same thing (with only a few extra freqs) - not much more than General class priveleges.

You obviously don't know much about the HF amateur bands.

Did you know that AOL software includes a SPELLCHECKER?

So what you're proposing is that all hams have all all bands and modes at full power just for passing the 35 question Technician test.

Well, there it is.

INCORRECT.

Civil War Dead:

185,594 combat
373,458 other
559,052 total

WW2 Dead:
292,131 combat
115,185 other
407,316 total

Source:

http://www.geobop.com/World/NA/Topics/History/Civil_War/reference/compare/

> Battle deaths are considered "bloody."

Dead is dead, whether it's on the battlefield, from disease, or in a prisoner of war camp. Us population during the Civil War was about 31 million. During WW2 it was about four times that.

You can dig through the pepper pot if you want but the fact remains that the Civil War cost more lives.

> All of that happened before N2EY's time.

And before Leonard Anderson's "time", unless he wants to take some sort of credit for being 12 years old on VJ Day.

> It is history.

That's why you should try to get it right.

From (N2EY):
>He mentioned Morse code, so obviously hams should be skilled at Morse code.
Sure, just not everyone.

>>Morse code is known to be obsolete, not useful.
>Of course it's useful. You just hate to admit that simple fact.

The FCC says Morse is not more desirable or required for amateur radio operation.

Also, Morse code, useful or not, is a different kind of skill than the written test. By requiring Morse code for General Class, it blocks entry to that class. Real-time encoding skills should not block one's advancement in the written class.

>>Advertising Hams use Morse code
>>to the non-Ham public would not make Ham radio look good.
>
>We do and it does.

Advertising Ham radio as cool, useful rather than nerdy will gain more members.

>>>I am an extremely technical person. It didn't scare me away.
>>
>>Good for you.
>>
>Didn't scare me away, either.

Misplaced priorities. Real EEs (or anyone interested in technical skills) don't code. It shows you put effort into learning a visceral encoding scheme. This takes away from the theory, which one did not HAVE to learn to get the license.

You should be advocating troubleshooting of rigs, use of test equipment, antenna setups, tuning rigs, etc. Instead you advocate Morse code. I have to wonder about that.

>So no change to the Tech?

No, no change to the Tech. Remember, with the "license in a day" class, most can pass it very painlessly in one day - without having to actually study and learn the material. This should not be much sacrifice to get a license for someone that just wants to operate and no theory.

>So we have Techs getting all bands and all modes at full authorized power
>under
>your plan?

No, Tech class would get the same as right now. No change to the Tech class.

>>The General and Extra classes get they extra "prestige" of getting those
>>licenses.
>
>Gee, thanks.

That's basically what is offered right now for the Extra class. Still people
that passed the General test want to get that Extra class.

I have outlined the plan below.
-This should satisfy those that just want to operate, and not learn theory.
-It also removes the Morse barrier from General class, so a visceral skill
(Morse code) does not block the "recognition" of technical skill (written
test).
*The only group it may not satisfy is someone that wants to get on HF using
voice and not CW.

Here's the plan:

Tech Test -
required to get Tech class license an be a licensed amateur.
Same privileges with new plan as currently given.

General Test-
required for General Class.
Must pass Test test before you can take General Test.
No additional privileges (just the "prestige" of higher licence class).
However, More freqs can be given here if they become available.
(Correct me if I'm wrong- all privs were given in the current Tech class).

Extra Test-
required for Extra Class.
Must pass Tech test, then General test before taking Extra Test.
No additional privileges. However, More freqs can be given here if they become
available.

Morse code Test
required for access to HF bands.
Must pass Tech written test only.

There you have it! Morse is a very useful mode

> Morse code is known to be obsolete, not useful. Advertising Hams use Morse code
> to the non-Ham public would not make Ham radio look good.

It's one mode that takes some practice to get good at. Most of the other
modes do not. They take some electronic or procedural talent.

And no, Morse is not obsolete. It's just an old mode. We use plenty of
"old" modes, as pointed out in my post. By the time Digital voice gets
to ham radio, it will be fairly old. THe main reason it's not here more
now is bandwidth problems.

Better draw that diagram, because I read this as a contradiction of what you said before. I don't see anything about the difference between the General and Extra with written only, and the same with the Morse CW test.

Yes, it is a different skill entirely. That's why it's there. It is a
very unique area of am radio.

>>>Advertising Hams use Morse code
>>>to the non-Ham public would not make Ham radio look good.
>>
>>We do and it does.
>
>
> Advertising Ham radio as cool, useful rather than nerdy will gain more members.

Ham radio is simply NOT cool! If you want cool, get street smart. Buy
Brittany Spears CD's and posters (hurry tho', her 15 minutes is just
about up. Grab a skateboard. Learn how to talk cool people talk (and you
don't like the terms hams use). Become a part of the least common
denominator orientation and worship of the mediocre that pop culture has
become. Get some cool tats. Be cool.

If you want cool, you definitely DON'T want Ham radio.

That's just fine in my book. Hams don't have to be oddball overweight
recluses and social misfits as you apparently think they are, but you
have to face it, it is not ever going to be a hobby of people who are so
self conscious that they have to affect those behaviors that are
identified as cool.

Oh, come on. Its Jim's time to do what he wants with. You seem to
insist that he spend his hobby time doing somethin that you want him to
do. Who ever said that a hobby had to have anything to do with a persons
vocation in the first place?

> You should be advocating troubleshooting of rigs, use of test equipment,
> antenna setups, tuning rigs, etc. Instead you advocate Morse code. I have to
> wonder about that.

From my tenure here, I gotta say that Jim is a lot more than just about
Morse code. You seem to be the one with an obsession with Morse.

True, but neither of those provide a clear reason why Iraq was singled out. Lets not forget that many countries have regularly disobeyed UN resolutions. I believe we've ignored a few ourselves. Likewise, numerous situations have caused, or are now causing, instability in the Middle East. The introduction of nuclear weapons to that region (by Israel) is one example.

Brian didn't seem to have any comment on the fact that he addressed me regarding what another wrote. It is lucky for him to have you around. The profile penned by N2EY is another matter. It does not describe Brian. It describes your behavior, the behavior which you seem unable to avoid.

> No originality. Good officer material.

Since you've obliged with yet another fulfillment of the profile, here it is:

N2EY: "Besides, here's a simple, plain fact:

No matter what job, educational level, employer, or government/military service that a radio amateur has, if said radio amateur opposes Mr. Anderson's views, he/she will be the target of Mr. Anderson's insults, ridicule, name-calling, factual errors, ethnic slurs, excessive emoticons and general infantile behavior."

Here's your big chance to demonstrate that the quote is the "Big Lie technique" which you say it is. Just explain the examples of your material I provided earlier in comparison to what Jim's profile says will be your actions. Maybe you can come up with a theory that your earlier material was accidentally posted or that you were under heavy medication when you wrote it. Perhaps you could convince readers that all of those things were forgeries.

To this point, you've offered no explanation at all. All you've done is moan about the "Big Lie technique" and "character assassination". Those things don't jibe with what anyone can plainly see is your typical behavior here.

Leonard doesn't play well with others.

I didn't disagree with it. I asked where the authority was on that
figure. He said that some club issues certificates, but coundn't say
who.

I placed the level somewhat
> higher. That answer didn't suit you.

You had no number. You said this is more than that. Your answer did
not suit me.

We know that there are numerous
> ops who are comfortable with 20, 25, 30, 35, 40 wpm. There are some who

> don't consider the 5 wpm level to be "skilled" or "expert".

I'd like to get to the bottom of this. If you have some information
on what the FCC says is proficient, past or present, I'd like to hear
of it. Even something from the 1912 Dept of the Navy would do.

> > > > You merely type words.

Yet, somehow, they require us to learn it.

Excellent! DICK has a positive contribution to make.

State where the FCC defined Morse proficiency long ago.

I'm sure Jim will back you up; he has all the referenced going back to 1912.

So what if it is a different kind of skill. I've known several hams with significant audio and/or learning handicaps. Those who wanted to pass the test did. "Real-time" encoding skills have NOT blocked anyone who really wanted to do it. Besides, didn't you know that talking is in itself a "real-time" encoding skill. Obviously not.

I said you should go look it up.

There's no reason for me, Dave or anyone else to keep answering your questions
when you won't answer ours about you alleged /T5 amateur operation. Questions
like:

What callsign was used?
What rigs and antennas were used?
Who did the equipment belong to?
What amateur bands and modes were used?
What countries and continents were worked?
How were the QSLs delivered?

Try answering those first.

>>
Perhaps a slight rewrite is in order:

No matter what job, educational level, employer, or
government/military service that a radio amateur has, if said radio
amateur opposes Mr. Anderson's views, he/she will be the target of Mr.
Anderson's insults, ridicule, name-calling, factual errors,
ethnic/racial/religious

slurs, excessive emoticons and/or general infantile behavior."

>I believe you'll find a number of the actions which the profile
>describes, presented in your response.

There's at least 5 years' worth of examples in Google.

>You just can't help yourself.

Len has, on occasion, posted without the described behavior. Therefore, it is logical to conclude that he can control his behavior. The actions described are his choice.

On 30 Mar 2003 05:20:11 -0800, Brian wrote:

>State where the FCC defined Morse proficiency long ago.

The FCC Eules are plain about what proficiency is required:

Sect. 97.503(a)

A telegraphy examination must be sufficient to prove that
the examinee has the ability to send correctly by hand and
to receive correctly by ear texts in the international Morse
code at not less than the prescribed speed, using all the
letters of the alphabet, numerals 0-9, period, comma,
question mark, slant mark, and prosigns AR, BT, and SK.

Seems to me that the proficincy required is to "send correctly
by hand and to receive correctly by ear texts in the international
Morse code at not less than the prescribed speed". The speed
itself is not the proficiency, the "correct sending and receiving"
is.

That wording has been in the Rules for decades.

That's right. They don't claim that because you pass a five word per
minute exam, you've suddenly become proficient in the use of morse.
Passing a driving exam doesn't mean that you're certified as a good
driver. It just means that you passed the exam.

Phil, yes, yes. But we've still got Dave saying that 5wpm cannot be
proficient. Jim says it's 10wpm. Dave says its higher but doesn't
know how much higher.

Apparently, Accuracy CANNOT Transcend Speed (sorry FISTS). Ever.

Even if it's to set a world record.

Sorry, but those questions are just too hard.

You bring up an incredibly interesting and poignant observation, Dwight.
All the cries for "patriotism" (those of people who imply it is unpatriotic
not to support and stand behind a President of the US), are probably right
along party lines; i.e., would we find a Republican pleading for respect and
admiration of a Democrat President or vice versa? hmmmmm....

Yes, I understand. However, the fact that India initially won its
independence without a war is siginificant to the idea that peace and
freedom cannot be won from tyranny without a war. That India fell apart
after it won its independence may be partly due to the fact that those who
led the nonviolent front were less influential (due in part to some deaths).
Incidental to, that the people began to squabble among themselves what the
"best way" was.

Geez, Dave, I really need to introduce Brian to a good old fashoned Missouri mule. I've come to the
concrete conclusion that the mule could learn a lot from Slim about pure muleheaded stubborness.The
usual cure for the mule is a two by four upside the head. Brian seems to need a new head.

Lessee, now....ARRL has issued Morse code proficiency certificates for much longer than the 47 years
I've been licensed. If I recall correctly the lowest speed for which they will issue a certificate is
10 wpm. FCC, on the other hand, only issues Radiotelegraph Operators licenses for speeds of not
lower than 20wpm. Clearly that's their definition as they won't authorize one to operate at any lower
speed, whatever his technical qualifications.

Jim thinks it's at least 10p wpm, whileyou believe something higher.

So looks like the definition of Morse proficiency depends on who's making the call.
Of course you already knew that, and repeatedly attempted to clue in Clueless Slim, to no avail.
Just one more example of the vast array of information that floated right past him all

those years during which he was busily engaged in his lifetime passion of protesting the CW test requirement.

Could we say narrowminded, single-issue maven with blinders?

That would be because 5wpm is NOT proficient, and you know it just as well as Phil. Brian, on the other hand, is still just as clueless as ever..

Five word per minutes maximum code speed isn't proficiency in morse
under anyone's standards, Bill. It is a minimal speed.

>
> Dave knows. You don't know.

If Dave knows, he's not saying. My interpretation is that Dave
doesn't know.

> > Apparently, Accuracy CANNOT Transcend Speed (sorry FISTS). Ever.
>

> accuracy.

And what is that lowest speed, and what is that lowest accuracy, which
when combined makes the lowest level of proficiency?

> > Even if it's to set a world record.
>
> ...only if they were attempting a "world's slowest morse" record.

Wrong again. That wasn't what the record was for.

We have Jim stating 10wpm, and Phil weighs in with Part 97 (5wpm).
Dave knows 5 cannot be proficient, and disagrees that 10wpm is it.
DICK just sit on the fence and slobbers.

use transit?
Would it have magically changed the laws of physics?

No to all of those questions.
>
>Ah, yes, the "environmental" president.
>
That was one of the Bushes.

The question is abput what the American people are willing to do, not their
government. IOW, personal responsibility for the future rather than expecting
Big Government to do it all. Watta concept.

Nowhere in 97.503 does the word "proficiency" appear. Nor the word
"proficient".
All the above does is incorporate S25.5 into Part 97, and define what
characters are to be included in the test.
>
> Seems to me that the proficincy required is to "send correctly
> by hand and to receive correctly by ear texts in the international
> Morse code at not less than the prescribed speed". The speed
> itself is not the proficiency, the "correct sending and receiving"
> is.

It also says "at not less than the prescribed speed".
>
> That wording has been in the Rules for decades.
>
Sure.

It also says send by hand and receive by ear, but those terms are not taken
literally. In fact the sending test effectively disappeared ~20 years ago.

And here's another twist: 97.503 says "using ALL the letters of the alphabet,
numerals 0-9, period, comma, question mark, slant mark, and prosigns AR, BT,
and SK." (emphasis added). 26 letters of the alphabet, 10 numerals, seven
punctuations and prosigns totals 43 different characters. Yet Element 1 can be

passed by copying 25 consecutive characters correctly - 25/43 = 58.1%, and that's only if there are no repeats in the text sent. No matter how the text sent is designed, one minute of it cannot include more than 58.1% of the required 43 characters. So the best a solid minute of 5 wpm copy can do is demonstrate the ability to correctly receive 58.1% of the required characters.

At ten wpm, a solid minute is 50 characters.

Yes, those test methods have been in use for decades.

Jeeze guys, why do you care? There are computer sound card programs that do 80+ wpm, so "proficient" could mean an ability to click on an icon then read text.

In my limited experience these programs don't copy manually transmitted Morse with 100% accurcy because most code isn't sent accurately (ie, most fists are poor), but that's not the computer's fault. Garbage in = garbage out.

Yes, I already know that human EDAC ability exceeds most computers'.

Personally, I think Tap Code should replace Morse: it's easier to learn, requires only "dots" (no dashes) and hence is used in most emergency situations.

Your lack of reading comprehension comes into play again, Brian. Again,
I know what I wrote and I did not make a statement calling ten wpm
"proficient". A few days ago you were so confused that you were
attempting to call me on things which Jim wrote. Get your stuff
grouped.

I don't know that anyone does yet I'm certain that you see good drivers
and bad drivers all the time. Do you have trouble telling them apart?

> What authority do they have to do so?

Why would anyone need authority to tell a good driver from a bad driver
or a good batter from a bad batter or a good rifle shot from a bad rifle
shot?

> How is this related to Morse Code proficiency?

That was already explained. Sorry you missed it.

I'll think about providing an answer as soon as you come up with the
answers regarding your supposed operation from Somalia:

What callsign was used?
What rigs and antennas were used?
Who did the equipment belong to?
What amateur bands and modes were used?
What countries and continents were worked?
How were the QSLs delivered?

None! There's no need given nuclear energy and the law of supply and
demand. Americans can simply use surplus cold-war weapons to both
increase their supply (ie, nuke the supplier and take the oil) and
reduce world demand (after all, stone-age peoples don't use oil).

Benefits us all?!? Simple. First we eliminate France, then .... (c:

Seriously, there is just as much air, water, et al, and almost as much
oil as there was 100 years ago. Trouble is there are what 4 or 5 times
as many people using and dirtying it as before. So, world population is
the real problem, not lack of (insert your favorite). It follows that
world population must and will shrink - one way or another. Remember
Easter Island?

I don't have a disagreement with Phil. I even read the cautionary
"Tripping Hazard" part. What is "the prescribed speed", Brian? Did you
see anything in the FCC material about "proficiency"?

> And what is that lowest speed, and what is that lowest accuracy, which
> when combined makes the lowest level of proficiency?

In my view, that lowest speed is higher than ten wpm. I'm not
discussing lowest accuracy at all. I'm more interested in the highest
accuracy.

> > > Even if it's to set a world record.
> >
> > ...only if they were attempting a "world's slowest morse" record.

> Wrong again. That wasn't what the record was for.

My statement can't be "Wrong again" since I didn't make any claim at
all. I know that wasn't what the world record was for and that's the
reason for my statement. It's all about reading comprehension, Brian.

At least for me it is not a political thing. If we had a democratic president with the same approach. I.E. first strike if necessary, then I would support him also.

What I never have, and I have 12 years in the military, not only in VN but in Germany literally defending the boundries of freedom during the 'cold war', supported the totally defensive stance of our country.

We won the cold war. Thats good. But we let our guard down. I blame that wholly on Clinton. Then 9/11 woke us up. If you dont see that we are under attack by now then I cant convince you. We have been at war for about 23 years, dating from the Aquilly Loura (sp) incident when that old man was tossed overboard in his wheelchair. The terrorists of this world hate us because of our power, or system and our support of Israel.

If we dont wake up and support this effort at preventing the inevitable then we can kiss off this American dream. Dont believe me? Think what this country would be like if we didnt help stop Hitler and Tojo.

Did you know that war cost this country 130percent of its GNP? And that most of the countries we helped have yet to repay us? But that after all was said and done we pulled out of it and created the best economy in the world. Our production exceeds the TOTAL OUTPUT of the entire area known as EUROPE.

Of course there jealous. Screw them.

Dan/W4NTI

> right along party lines; i.e., would we
> find a Republican pleading for respect and
> admiration of a Democrat President or vice
> versa? hmmmmm....

You're probably right, Kim. It is amazing how many people identify with a single political party. I supported Bush during the last election. I did so because of Republican party claims of support for smaller government (Bush has increased it dramatically), opposition to NAFDA (Bush has done nothing to end it), opposition to massive immigration (again, Bush has done nothing to even slow it down), and a return to fairness in civil rights (nothing).

Prior to that, I supported Clinton during his first campaign. I did so because of Democratic party claims of support for an increase in the minimum wage (very minimal), health care (nothing), world peace (war in Kosovo), and increased educational benefits (minimal).

Do I blame either political party? No, both are to blame. Both are so similar on major issues (like those above) it is hard to tell them apart. Both have done things to harm the American people, the American worker, and the American family. At this point, I feel we would be better off with a complete ban on political parties, or large spending on a single candidate, in this country. Sadly, with political parties in control, we are not likely to ever see that.

There is an interesting line towards the end of the movie "Hunt for Red October" that would probably apply here. I'll leave this rant with that.

Why blame only Clinton, Dan? When it comes to the military (base closings, weapons cuts, military spending, etc), Clinton only continued the trends of the Regan and Bush administrations. The military base here was closed while Bush Sr. was in the White House.

> (snip) If you dont see that we are under attack by
> now then I cant convince you. (snip)

With our country presently blasting the heck out of the people of two countries (with threats to attack still other countries), it is a little hard to see the present situation as an attack on us.

> (snip) The terrorists of this world hate us because of
> our power, or system and our support of Israel. (snip)

Then perhaps we should rethink the support for Israel. Israel has never came to our aid in any recent conflict around the world. In fact, I can't think of a single substantial benefit from siding with Israel. Can you? This is an honest question that I'd really like an answer to (from anybody).

> (snip) Did you know that war cost this country 130
> percent of its GNP? And that most of the countries
> we helped have yet to repay us? (snip)

They repaid us exactly what we asked for - the lease of military bases in their countries for nearly a century, support in our political restructuring of the axis countries, and so on.

1604. make money legally, fast and easy!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!

Newsgroup: rec.radio.amateur.policy
Date: 2003-03-31 19:59:57 UTC
From: smsiemon@aol.com
Message-ID: <20030331145957.16172.00000200@mb-ca.aol.com>
Source record: 63791

$MAKE YOURSELF SOME MONEY$$, NO SCAM! GUARANTEED MONEY! NO JOKE!$$

Dear Internet User,

Hi, I'm 23 years old and I make more money than my parents and so can you" Turn $6.00 into $60,000...read this to find out how!!! READING THIS COULD CHANGE YOUR LIFE!

I found this on a bulletin board like this one and decided to try it. A little while back, I was browsing through several newsgroups, just like you are now, and came across an article similar to this that said you could make thousands of dollars within weeks with only an initial investment of $6.00! So I thought, "Yeah right, this must be a scam", but like most of us, I was curious, so I kept reading. Anyway, it said that you need to send $1.00 to each of the 6 names and address stated in the article. You then place your own name and address in the bottom of the list at #6, and post the article in at least 200 newsgroups. (There are millions) No catch, that was it. So after thinking it over, and talking to a few people first, I thought about trying it. I figured: "what have I got to lose except 6 stamps and $6.00, right?" Then I invested the measly $6.00. Well GUESS WHAT!!... within 7 days, I started getting money in the mail! I was shocked! I figured it would end soon, but the money just kept coming in. In my first week, I made about $25.00. By the end of the second week I had made a total of over $1,000.00! In the third week I had over $10,000.00 and it's still growing. This is now my fourth week and I have made just over $42,000.00 and it's still coming in rapidly. It's certainly worth $6.00, and 6 stamps, I have spent more than that on the lottery!!

Let me tell you how this works and most importantly, why it works.... Also, make sure you print a copy of this article NOW, so you can get the information off of it as you need it. I promise you that if you follow the directions exactly, that you will start making more money than you thought possible by doing something so easy!

SUGGESTION: Read this entire message carefully! (print it out or download it.) Follow the simple directions and watch the money come in! It's easy. It's legal. And, your investment is only $6.00 (Plus postage).

IMPORTANT: This is not a rip-off; it is not indecent; it is not illegal; and it is virtually no risk - it really works!!!! If all of the following instructions are adhered to, you will receive extraordinary dividends.

PLEASE NOTE: Please follow these directions EXACTLY, and $50,000 or more can be yours in 20 to 60 days. This program remains successful because of the honesty and integrity of the participants. Please continue it’s success by carefully adhering to the instructions. You will now become part of the Mail Order business. In this business your product is not solid and tangible, it's a

service. You are in the business of developing Mailing Lists. Many large corporations are happy to pay big bucks for quality lists. However, the money made from the mailing lists is secondary to the income which is made from people like you and me asking to be included in that list.

~~~>HERE ARE 4 EASY STEPS TO GET STARTED<~~~

STEP 1: Get 6 separate pieces of paper and write the following on each piece of paper "PLEASE PUT ME ON YOUR MAILING LIST." Now get 6 US $1.00 bills and place ONE inside EACH of the 6 pieces of paper so the bill will not be seen through the envelope (Please make sure that the bill wouldn't be noticed in the envelope to prevent thievery). Send out US $ DOLLAR, so it would be more acceptable.

STEP 2: Next, place one paper in each of the 6 envelopes and seal them properly. You should now have 6 sealed envelopes, each with a piece of paper stating the phrase, "PLEASE PUT ME ON YOUR MAILING LIST.", your name and address, and a $1.00 bill.

What you are doing is creating a service. THIS IS ABSOLUTELY LEGAL! You are requesting for a legitimate service and you are paying for it! Like most of us, I was a little skeptical and a little worried about the legal aspects of it all. So I checked it out with the U.S. Post Office (1-800-725-2161) and they confirmed that it is indeed legal!

Mail the 6 envelopes to the following addresses below:

#1)B. Hooper ; 3 Warringah Gve.
Petrie, QLD, Australia 4502

#2)Matthew Speight ; 6 Charnwood Ave.
Belfast , N. Ireland : BT15 5DH

#3)Ahmad Mujeeb ; 307-14 15 st, NW,
Charlottesville, VA, USA, 22903

#4)Rostum Hernandez ; #2 Jericho St.,
Victoriaville Subd. ,Antipolo City,
Phillippine, 1870

#5)R.Pena ; 1962 46St. S.W.,
Naples , FL., USA, 34116

#6)sara siemon
9245 lower valley pike
new carlisle,oh 45344

STEP 3: Now take the #1 name off the list that you see above, move the other names up (6 becomes 5, 5 becomes 4, etc...) and add YOUR Name as number 6 on the list.

STEP 4: Copy this article. Change anything you need to, but try to keep this article as close to original as possible. Now, post your amended article to at least 200 newsgroups. (I think there are close to 2.4million groups) All you
~~~

need is 200, but remember, the more you post, the more money you make! This is perfectly legal! If you have any doubts, refer to Title 18, Section 1302 and 1341, US Postal and Lottery Laws or Title 18, Section 3005 in the US code, also in the code of Federal regulations, Volume 16, Sections 255 and 436, which states; "a product or service must be exchanged for money received." The simple note in the letter, "PLEASE PUT ME ON YOUR MAILING LIST", makes it legal because you are paying for exchange of a service, (adding the purchasers name to his mailing list) for a $1.00 fee.
: Keep a copy of these steps for yourself and, whenever you need money, you can use it again, and again. PLEASE REMEMBER that this program remains successful because of the honesty and integrity of the participants and by their carefully adhering to the directions. Look at it this way. If you are of integrity, the program will continue and the money that so many others have received will come your way.

NOTE: You may want to retain every name and address sent to you, either on a computer or hard copy and keep the notes people send you. This VERIFIES that you are truly providing a service. (Also, it might be a good idea to wrap the $1 bill in dark paper to reduce the risk of mail theft.) So, as each post is downloaded and the directions carefully followed, six members will be reimbursed for their participation as a List Developer with one dollar each. Your name will move up the list geometrically so that when your name reaches the #1 position you will be receiving thousands of dollars in CASH!!! What an opportunity for only $6.00 ($1.00 for each of the first six people listed above) Send it now, add your own name to the list and you're in business!

~~~>DIRECTIONS FOR HOW TO POST TO NEWSGROUPS<~~

Step 1) You do not need to re-type this entire letter to do your own posting. Simply put your mouse cursor at the beginning of this letter, click and drag your cursor to the bottom of this document, right click and select 'copy' from the edit menu. This will copy the entire letter into the computer's memory.

Step 2) Open a blank 'notepad' file and place your mouse cursor at the top of the blank page. Right click and from the 'edit' menu select 'paste'. This will paste a copy of the letter into notepad so that you can add your name and postal address to the list.

Step 3) Save your new notepad file as a .txt file. If you want to do your postings in different settings, you'll always have this file to go back to.

Step 4) Use Netscape or Internet explorer and try searching for various newsgroups (on-line forums, message boards, chat sites, discussions.)You can post anywhere!!! There are tons of free bulletin boards if you just look for them!!

Step 5) Visit these message boards and post this article as a new message by highlighting the text of this letter and selecting paste from the edit menu. Fill in the Subject, this will be the header that everyone sees as they scroll through the list of postings in a particular group, click the "post" message button. You're done with your first one!
NOTE: Please don't SPAM or send unsolicited emails. It's completely illegal.
~~~

Send emails to all the people you know or any ways that allows you to, instead of SPAMMING.(Just a reminder).

Congratulations...THAT'S IT! All you have to do is jump to different newsgroups and post away, after you get the hang of it, it will take about a minute for each newsgroup! **REMEMBER, THE MORE NEWSGROUPS YOU POST IN, THE MORE MONEY YOU WILL MAKE!! BUT YOU HAVE TO POST A MINIMUM OF 200** That's it! You will begin receiving money from around the world within days! You may eventually want to rent a P.O.Box due to the large amount of mail you will receive. If you wish to stay anonymous, you can invent a name to use, as long as the postman will deliver it. **JUST MAKE SURE ALL THE ADDRESSES ARE CORRECT.**

*Now the WHY part; Out of 200 postings, say I receive only 5 replies (a very low example). So then I made $5.00 with my name at #6 on the letter. Now, each of the 5 persons who just sent me $1.00 make the MINIMUM 200 postings, each with my name at #5 and only 5 persons respond to each of the original 5, that is another $25.00 for me, now those 25 each make 200 MINIMUM posts with my name at #4 and only 5 replies each, I will bring in an additional $125.00! Now, those 125 persons turn around and post the MINIMUM 200 with my name at #3 and only receive 5 replies each, I will make an additional $626.00! OK, now here is the fun part, each of those 625 persons post a MINIMUM 200 letters with my name at #2 and they each only receive 5 replies, that just made me $3,125.00!!! Those 3,125 persons will all deliver this message to 200 newsgroups with my name at #1 and if still ONLY 5 persons per 200 newsgroups react I will receive $15,625,00! With an original investment of only $6.00! AMAZING! When your name is no longer on the list, you just take the latest posting in the newsgroups, and send out another $6.00 to names on the list, putting your name at number 6 again. And start posting again. The thing to remember is: do you realize that thousands of people all over the world are joining the internet and reading these articles everyday?, JUST LIKE YOU are now!! So, can you afford $6.00 and see if it really works?? I think so... People have said, "what if the plan is played out and no one sends you the money? So what! What are the chances of that happening when there are tons of new honest users and new honest people who are joining the internet and newsgroups everyday and are willing to give it a try? Estimates are at 20,000 to 50,000 new users, every day, with thousands of those joining the actual internet!!! REMEMBER, PLAY FAIRLY AND HONESTLY AND THIS WILL WORK FOR YOU!!!

I never mentioned base closings. Perhaps I should have been more clear. I blame Clinton for GUTTING OUR DEFENSE, the CIA and the FBI. I blame Clinton for getting BJs and sleeping around while the terrorists set things up. Plus other things, but I'll stop here.

You dont think flying four planeloads loaded with Americans into two targets and a field in Pennsylvania a declaration of war? What would you call it then?

Have you forgotten the airliners blasted out of the sky? The Americans killed just for being Americans...etc. ??

They are the bullet stoppers of the middle east. And when they have had
enough they will take care of business.

They provide the ONLY real ally this country will EVER have in the Middle
East.

They provide us with much useful intelligence of terrorist activities. Our
problem is we didnt pay any attention.

Im sure there are many more. But that will do for me.

If thats true then why did DeGualle throw us out? And still not repay a
damn cent?

Status of forces agreements vary from country to country. They needed us
there to blunt the Red Army from walking through Fulda gap and chewing up
the Rhine River.

They needed us a heck of a lot more than we needed them. For that matter
still do. Without American force of arms they would all be Russian now.
And the USSR would still be around. Period.

You could have just as easily have said DICK/W0EX In = Garbage Out.
He claims to send Morse Code so attrociously that there isn't a
No-Coder alive who could copy him with a computer program.

And he's proud of it.

> Yes, I already know that human EDAC ability exceeds most computers'.

But you do. There's that comprehension thing again. I wonder what's
next?

I even read the cautionary
> "Tripping Hazard" part. What is "the prescribed speed", Brian? Did you
> see anything in the FCC material about "proficiency"?

You are supposed to be the knowledgeable Code. I'm the mere 5wpm guy.

I'll defer to your "expertise."

What is the minimum speed and accuracy at which proficiency starts (or
begins)?

> > > > Jim says it's 10wpm. Dave says its higher but doesn't

You need to state the standard at which proficiency starts. Accuracy
is an element of proficiency as you've previously stated.

So what is it?

> > > > Even if it's to set a world record.

Sure you did; "worlds slowest morse." That wasn't what the record was
for.

I know that wasn't what the world record was for and that's the
> reason for my statement. It's all about reading comprehension, Brian.

Yes it is, Dave. Try it sometime.

Brian

> Your lack of reading comprehension comes into play again, Brian.

Wow. You get two direct replies, one from Phil Kane, the other from
Bill Sohl, and then you state "5wpm ... in anyone's book."

Talk about a comprehension problem.

Again,
> I know what I wrote and I did not make a statement calling ten wpm
> "proficient".

Talk about a comprehension problem. I never said that you said 10wpm
was proficient. You said 20wpm is more proficient than 13wpm. You
-never- stated what the you consider the lowest proficiency level or
why.

A few days ago you were so confused that you were
> attempting to call me on things which Jim wrote. Get your stuff
> grouped.

Dave, it would appear that you are confused. Take a moment before
responding again. Maybe the right words will come to you.

First, give some straight answers to these questions regarding your alleged /T5
amateur radio operation:

What callsign was used?
What rigs and antennas were used?
Who did the equipment belong to?
What amateur bands and modes were used?
What countries and continents were worked?
How were the QSLs delivered?

You have said these questions were "too hard", but it's clear the answers are
easy.

I was surprised to read this, but upon looking I found there has been no direct
evidence that Iraq had anything to do with the Sept 11 attacks. Indeed, it
would go against character for Saddam to help out people (terrorists) over whom
he does not have total control.

>We're attacking a country and
>killing many thousands. More than rhetoric is required to justify that.
>
I think the main concerns of the Bush administration are:

- the continued efforts by Iraq to obtain WMDs
- the continued defiance of the requirements of the 1991 cease-fire agreements
such as harassment and access denial of UN weapons inspectors, targeting of UN
aircraft in the no-fly zones, etc.

Do these concerns justify the actions taken by the coalition forces? Will those
actions help our national security? Or will they act as recruitment aids for
OBL & Co.?

--

Here's an odd thought for you:

One of the things that OBL demands is removal of foreign infidel troops from the holy land of Arabia. Yet the main reason those troops are there is because of invasion of Kuwait and the continued threat of more of the same. If regime change and stabilization does occur, there will no longer be a reason for those troops to be in the region.

>freedom cannot be won from tyranny without a war.

Was British rule of India really "tyranny"?

In any event, dead in a war is still dead, whether it's a war of independence
or a civil war.

The British left India in part because they were too decent to brutally crush the nonviolent resistance movement, in part because they were worn out from WW2, and in part because they realized it was contradictory to force their rule upon India when they'd just spent years stopping Germany and Japan from ruling everything. Do you think Hitler or Stalin would have responded the way the British did?

Besides, one of the main reasons the Brits gave for their colonialist/Kiplingesque "burden" behavior went something like this: "If we just up and leave, these blighters will be at each others throats as soon as we're gone". Which sounded oversimplified until the Brits actually left, whereupon they were proven correct.

How many people died in the war that split India into 2-3 countries? How many did the British kill in all the preceding years of colonial rule?

I'm not trying to justify denying people their independence, just pointing out that Indian independence involved a very bloody war.

>That India fell apart
>after it won its independence may be partly due to the fact that those who
>led the nonviolent front were less influential (due in part to some deaths).
>Incidental to, that the people began to squabble among themselves what the
>"best way" was.
>
I'd say it's mostly due to the fact that without the common enemy of the British, the various factions started fighting.

Note also that India was trying to gain its independence from a distant foreign empire rule that saw itself as benevolent. Overthrowing a homegrown dictatorship that has dominated every aspect of a country for decades is a different thing.

What's a real unknown is how people will behave when a foreign superpower invades with the goal of overthrowing the current homegrown dictator. Some are bound to react with "We hate him, but we hate these invaders even more" and "Yes, he's a murdering SOB, but he's OUR murdering SOB!!".

Wellllll!...."Tijuana style entertainmant" Indeed! One wonders just
how much of that
sort of thing Slim has participated within, or if maybe he's just
regurgitating what he has heard, as so many have, from those who've been
there and reported on it -sort of like
Slim's ham radio exposure.

But he removed all doubt on one point - Surprise! A mule is smarter
than he is. It knows the difference between a mule and a donkey.

Yep, you got that right for sure. There is nearly no difference--the people
get to go to the voting booths...and I do...but why? Politicians turn
around and tell us we are too stupid to tell them what we desire. And it
doesn't matter *what* political party it is, both/all do whatever the hell
they want while they are in office...with our push of a button and at our
expense.

It is "fast" to someone who copies at 4 WPM.

> Do you think that anyone whose highest speed is 5 wpm is
> proficient at morse?

If they copy 100% at 5 WPM, then they are proficient at that speed.
If they continue to practice like I did, then some day they may be
proficient at 45WPM.

BS. The gummint didn't have squat to do with the lack of "conspicuous consumption" in '72. Not the gummint in Washington that is. $5/gal. in a real free capitalist market will fix the "problem" real quick and that maneuver is long overdue. Now that we're in the process of making even more OPEC "friends" watch it happen. Fuggit, I have my Metro.

I'm not sure how to argue this one. At first look it appears that
you're agreeing with me. The government did nothing to slow/stop
consumption.

But when we throw Henry Kissinger (government employee) into the
picture a few months later, it becomes cloudy. He convinced the Arab
nations to hold us hostage, and use the ransom money to purchase US
manufactured arms.

$5/gal. in
> a real free capitalist market will fix the "problem" real quick and

$5/gallon is NOT free market. The only people paying $5/gal are the
one's who's government interfered and put a tariff/tax on fuel to slow
the trade imbalance.

I've still got my 91 metro with 149.5k miles on it, and drive it
daily,

and I love it when Rush plays "In a Yugo."

We're not talking about the mark of ops. We're talking about morse proficiency.

What is the lowest speed that you consider proficient, and why?

I'm still gathering information. Unfortunately, the information
forthcoming from those who have always claimed to know the most about
amateur radio (The Extras) just aren't amounting to much.

One say's its 10wpm, two others say 5, and one says its above 10wpm,
but doesn't know how much higher.

> > > > I placed the level somewhat

So no one certifies good drivers yet you bring up good driver
certification. Why do you do this? Why can't you stay on subject?
Are you confused?

> > What authority do they have to do so?
>
> Why would anyone need authority to tell a good driver from a bad driver
> or a good batter from a bad batter or a good rifle shot from a bad rifle

You were talking about good driver certification, now you've floated
off to marksmanship. Do you have Adult Attention Defecit Disorder?

> > How is this related to Morse Code proficiency?
>
> That was already explained. Sorry you missed it.

Just stick to Morse code proficiency. We just might get through this
some day.

> total control.

I'm no different than anyone else, Jim. If I thought Saddam had anything to do with 9/11, I'd be spitting mad. But, like you, I don't see any evidence of that. Yet this very incident is consistently thrown out as one justification for the current invasion of Iraq. The contradiction of those two realities makes me uncomfortable, and causes suspicion about the other justifications thrown around.

> I think the main concerns of the Bush administration
> are:
>
> - the continued efforts by Iraq to obtain WMDs

And when looking at this issue, we cannot ignore Israel. Many Arabs feel they have a bone to pick with that country. Israel, in an effort to defend itself, obtained nuclear weapons (a weapon of mass destruction). Fine and dandy. But, by doing so, it caused other nations in the area to want nuclear weapons also. We said and did very little, if anything, about Israel's attempts to obtain nuclear weapons, but are bombing the heck out of Iraq because they seek to obtain nuclear weapons. This contradiction in our policies towards countries is looked at with suspicion by many in the Arab world, and by a growing number of people all over the world. One could argue this contradiction is just politics but, when we start invading countries and killing people over it, support for our actions is certain to weaken.

> - the continued defiance of the requirements of the
> 1991 cease-fire agreements such as harassment and
> access denial of UN weapons inspectors, targeting
> of UN aircraft in the no-fly zones, etc.

This is a legitimate point (perhaps the only one with a real justification for the invasion of Iraq), but it brings to mind the events following WWI, leading up to WWII. If you remember your history books, heavy burdens were placed on Germany following the first World War (weapons restrictions, troop limitations, reparations, and so on). This had a detrimental effect on the German economy, its efforts to rebuild following the war, caused Germans to feel venerable in the volatile Europe of the time, and was an affront to the honor of that country. Right or wrong, Germany began to defy the surrender agreements within a decade of that war's end, with the people open to any leader who offered a solution to their problems. Hitler was the eventual answer, with another World War as the result.

Taking the lessons we learned there, one could argue that an invasion is necessary to head off a potential conflict down the road as Iraq goes through similar detrimental effects from its last war. One could also point to a similar empowerment of rogue leaders. Clearly, the only way to avoid an endless cycle of detrimental effects and empowerment of rogue leaders, is to spend hundreds of millions or perhaps billions to reduce the detrimental effects by rebuilding the country (not missed by some when discussing a post-Saddam Iraq).

However, the question remains whether this will ultimately work with the same conditions in the region - Israel will still have nuclear weapons and our contradiction in policies will still remain (we will still attempt to block the acquisition of nuclear weapons by other nations in the region). Even if we're successful with Iraq, there are a dozen other countries in the region with similar views about acquiring weapons of mass destruction. Do we invade them all? Or do we change our policy towards Israel?

> One of the things that OBL demands is removal of foreign
> infidel troops from the holy land of Arabia. Yet the
> main reason those troops are there is because of invasion
> of Kuwait and the continued threat of more of the same.
> If regime change and stabilization does occur, there
> will no longer be a reason for those troops to be in the
> region.

No regime change is going to cause the removal of our troops. Like Europe and Asia, our troops will be in that region for the next hundred years or so. The "defense" industry is jumping for joy today - suffering from the end of the cold war in Europe, they can now look forward to decades of conflicts and arms sales. And this country is going to need new national cemeteries to bury our war dead - Arlington is nearly full.

1637. No more FCC regulation

Newsgroup: rec.radio.amateur.policy
Date: 2003-04-01 16:54:20 UTC
From: Vito <vito@crosslink.net>
Message-ID: <3E89C43C.B4EDF9AD@crosslink.net>
Source record: 63669

From EHam

Eham.net has learned that the FCC will soon announce that all licensing and regulation of the Amateur Service will cease, effective upon publication of the applicable Order in the Federal Register. Eham was told that the FCC is taking this step for two reasons. First, this action will reduce the FCC's budgetary needs in this era of federal deficits. Second, the FCC noted that so-called "freeband" unlicensed HF operation has matured to the point where it no longer has significant negative impact. Therefore, the FCC reached the conclusion that the current Amateur Service testing, licensing, and regulatory structure serves little or no real purpose.

Eham's source emphasized that HF operation will continue to be permitted by any U.S. resident in the current amateur allocations below 30 MHz. These frequencies, along with the 26-28 MHz band, will become officially available for any non-commercial, non-broadcasting communication purpose. All other Amateur allocations (above 30 MHz) will be withdrawn, and will be reallocated to commercial interests. .....

1638. Re: ARS License Numbers

Source record: 63674

These are the number of unexpired FCC ARS
licenses held by individuals on the dates listed:

As of May 14, 2000:

Novice - 49,329
Tech - 205,394
Tech Plus - 128,860
General - 112,677
Advanced - 99,782
Extra - 78,750
Total - 674,792

As of March 31, 2003:

Novice - 35,024 (decrease of 14,305)
Tech - 251,221 (increase of 46,715)
Tech Plus - 70,249 (decrease of 58,611)
General - 140,487 (increase of 27,810)
Advanced - 83,833 (decrease of 15,949)
Extra - 103,709 (increase of 24,959)
Total - 685,471 (increase of 10,679)

> It would have more Ford Escorts and Geo Metros on the road than SUVs.

How?

People buying cars seek out the cars they want. When fuel was
relatively expensive and the supply perceived to be in jeopardy, fuel
efficient cars were highly sought after. Years of plentiful, cheap gas
have made fuel economy very low on the list of buyer priorities - new
or used.

Just look at the cost figures: If someone drives 12,000 miles/yr and
fuel is $1.50/gallon, the fuel cost for a 12 MPG SUV is $1500/yr vs.
$500/yr for a 36 MPG econobox. Compared to what a new car costs to buy
and insure, that's just not a lot of money. To many Americans, $1000
shelled out over the course of a year is not worth giving up the
comfort, convenience and image of driving an SUV, pickup, etc. And
because fuel cost is paid out $20-30 at a time, it does not show up on
many people's economic radar.

> You do the math.

Just did. What do YOU drive, and how many miles/yr?
>
> > Would it have magically changed the laws of physics?
>
> There's nothing wrong with physical laws. You just need to know how
> to apply them.

So tell us how to improve fuel economy to the point that the USA
doesn't have to import half its oil.

> You're supposed to be an engineer, right?

Not "supposed to be". I am. Among the required coursed in electrical
engineering were basic mechanics and thermodynamics. An Otto-cycle
gasoline engine with 10:1 compression ratio isn't going to do much
better than 30-35% efficiency under ideal conditions, for a start.
>
> > No to all of those questions.
>
> Wrong.

How is it "wrong"?
>
> > >Ah, yes, the "environmental" president.

> > government. IOW, personal responsibility for the future rather than
> > expecting
> > Big Government to do it all. Watta concept.
>
> Whatta load of BS.

The concept of personal responsibility is BS?

> Conspicuous consumption will occur anywhere the
> government doesn't slow it down.

Ah, I see. You want Big Government to force people to "do the right thing", rather than educating them so that they take responsibility for their own actions.

It has been shown that the fuel efficiency of cars and trucks drops dramatically above about 50 MPH, so by your logic the 55 MPH speed limit should be reimposed.

Since it's fuel we're trying to save, your logic would follow the European model of taxing gasoline at a very high rate to bring the consumption down. (The basic production cost of gasoline in Europe isn't much higher than in the USA, but the taxes are so high that their price per liter is close to our price per gallon). So perhaps gasoline should be taxed so it costs $4-$5 gallon, or even more.

All these things follow from your argument that "Conspicuous consumption will occur anywhere the government doesn't slow it down."

And why stop at gasoline? Perhaps junk food and McD's should be more heavily regulated, because so many Americans carry around extra pounds due to "conspicuous consumption". Would make Vipul happy, anyway.

I wonder how other folks think about your ideas.

That's what the Serbs said a few years ago and the "authorities" are
stil diddling with Milosevic in the Hauge.

> >
> Then think about how Germany was reunited and the Soviet Union fell apart.

Does not apply to the current conflict in Iraq. Anybody who had half a
brain knew that the Communist socioeconomic system defied basic human
nature and was doomed from the gitgo in 1917. Ref: Pat Moynihan and
others circa 1960s who preached patience instead of "liberation".
Unfortunately it took 75 years for the Russians to wise up and unplug
the Soviet Union and start over.

A huge number of Arabs & many other Muslims are a whole different
ballgame by virtue of their religious beliefs which are at odds in
very basic ways with fundamental western beliefs including those of
the Russians. Any time any western power goes up against an enemy
which postulates that dying for the cause is glorious based on
religious beliefs we have a problem of monumental proportions. And we
sure as hell do. Q.E.D.

OK, let's talk frankly about Israel.

>Many Arabs feel
>they have a bone to pick with that country. Israel, in an effort to defend
>itself, obtained nuclear weapons (a weapon of mass destruction).

Many of Israel's neighbors have said they want to destroy Israel completely.
"Push them all into the sea", etc. To my knowledge, only Egypt has acknowledged
that Israel even has a right to exist. And Egypt's president paid for the Camp
David agreement with his life.

> Fine and
>dandy. But, by doing so, it caused other nations in the area to want nuclear
>weapons also.

Does Saudi Arabia want nukes? Yemen, Bahrain, Egypt, Syria, Lebanon - do any of
them want nuclear weapons? I don't think so.

>We said and did very little, if anything, about Israel's
>attempts to obtain nuclear weapons, but are bombing the heck out of Iraq
>because they seek to obtain nuclear weapons.

Israel isn't a dictatorship that has used chemical weapons on civilians.

Israel isn't a country with the second largest oil reserves in the world, and
the potential to be a rich paradise of a country, whose people exist in
poverty, want and desperation due to the repressive policies of its govt.

>This contradiction in our
>policies towards countries is looked at with suspicion by many in the Arab
>world, and by a growing number of people all over the world.

I think it really boils down to not wanting to set a precedent of invading a
country and overthrowing a govt. because a country half the world away feels
threatened.
>

Different thing entirely. Iraq wasn't required to make huge payments or damage its economy. All that was really required was disarmament, and verification of same. But SH wouldn't allow it.

> Right or wrong, Germany began to defy the surrender
>agreements within a decade of that war's end, with the people open to any
>leader who offered a solution to their problems.

And the rest of the world did not stand up to Germany and stop them when it would have been easy to do so. And the USA refused to join the LEague of Nations, leading to that organization's failure.

Let's play alternative history for a bit:

What if the first German violation of the treaty had been stopped rather than appeased?

What if the first Iraqi violation of the cease fire had not been tolerated, rather than appeased?

>Hitler was the eventual
>answer, with another World War as the result.

Also something now known as the Holocaust.
>
> Taking the lessons we learned there, one could argue that an invasion is

Neither are the CAFE standards you seem to like so much.

>The only people paying $5/gal are the
>one's who's government interfered and put a tariff/tax on fuel to slow
>the trade imbalance.

>
Most of the rest of the oil-importing world pays about $5 gallon.

The point is that in order to get a certain behavior, that behavior must be rewarded. Reimposing CAFE standards in a country with cheap plentiful gas will not cause people to buy more efficient cars. Initially, it will cause a rush to buy big cars before the requirements are enacted, and afterwards will keep existing big cars on the road longer. It also unfairly penalizes those who need a large vehicle, no matter how little or how efficiently they use it. Example: which is better - one 16 mpg minivan with 6-7 commuters carpooling, or those same 6-7 people driving their own 32 mpg econoboxes?

If it's reduced fuel consumption that's the goal, then it's the price of fuel that needs to change in order to make reduced consumption the goal. That's W3RV's pint, and he's right on target.

Know why other countries have great transit and passenger rail systems? They partially fund 'em with fuel taxes.

You must have read something into each of their posts which was not
stated by either of them. It either of them decides to build upon their
respective statements, I can deal with that. So far, it hasn't
happened.

> I think I've got a handle on it.

No, I don't believe you do.

Okay. Five wpm is a minimal speed for morse code. It is slow enough
for a receiving op to be able to count dits and dahs, glance at a chart
containing morse characters and write down the character received, while
eating a sandwich.

"Look it up" is a straight answer.

> You were talking about good driver certification, now you've floated
> off to marksmanship. Do you have Adult Attention Defecit Disorder?

A "defecit" sounds like it could be very unpleasant. A batter whose
average is .125 isn't a proficient hitter. A driver who weaves across
the center line and who doesn't use turn signals isn't a proficient
driver. A shooter who hits the target ten times out of a hundred shots
isn't a proficient marksman. One whose maximum morse speed is five words
per minute when most others receive at speeds which are three to eight

times faster is not proficient in the use of morse code.

> > > How is this related to Morse Code proficiency?
> >
> > That was already explained. Sorry you missed it.
>
> Just stick to Morse code proficiency. We just might get through this
> some day.

I don't believe we will. You want someone to tell you that someone whose maximum morse speed is five words per minute is proficient in the use of morse. I'm not going to be the person to tell you that because I don't believe it to be true.

Other than the issues I raised (base closings, weapons cuts, military spending, etc), how did Clinton gut defense in a manner inconsistent with the two previous administrations?

The cold war was over, leading to an obvious opportunity to reduce military spending. But, I don't agree our defense capability was seriously weakened by that reduction. We lowered manpower by about 500,000, leaving a military with a million and half active duty personnel - perhaps the largest active duty military in the world. We continue to have more planes, more tanks, more ships, and better technology than any other country in the world. Overall, our planes, tanks, ships, and other hardware, are newer than that of any other country in the world. Our military is the best trained and best equipped in the world. And finally, our spending on military research and development remains the highest in the world. I wouldn't trade our military today, or at the end of the Clinton administration, for any other military in the world.

I haven't forgotten anything, but I thought we were talking about Iraq. It doesn't appear Iraq was involved in any of what you just mentioned.

> If thats true then why did DeGualle throw us out?
> And still not repay a damn cent?

We left France because of later disagreements. Our government hasn't asked for "cent" beyond that. If you don't feel that is right, perhaps you should talk to your representatives in that government. Of course, they'll probably tell you there is a reason why nothing was asked for - such as our desire not to drive a further wedge between us and an ally.

> They needed us a heck of a lot more than we needed
> them. (snip)

Don't fool yourself. I don't think either (the Europeans or ourselves) needed one over the other - Europe offered as many benefits to us as we did to them.

> Camp David agreement with his life.

If you note the "fine and dandy" following the sentence you replied to, I didn't dispute Israel's need to defend itself. However, as I understand it, Israel pushed out almost all Arabs once living within its borders, creating massive refugee camps in neighboring countries and in occupied territories once belonging to those neighboring countries. Am I wrong about that? If not, that could certainly explain ill feelings towards Israel on the part of some Arabs.

The land of Israel is also not valueless. It contains some of the most valuable agricultural land in that immediate region, is the seat of several major religions, and was the only access to the Mediterranean Sea (a major trade route) for two of Israel's neighbors. In other words, the loss of those lands was a significant blow to the Arabs, again which may help explain the ill feelings.

Regardless, Israel is there and is not going to be destroyed. I think even most Arabs realize that at this point, in spite of the rhetoric.

> Does Saudi Arabia want nukes? Yemen, Bahrain, Egypt,
> Syria, Lebanon - do any of them want nuclear weapons?
> I don't think so.

Since most countries seek nuclear weapons in secret, it is difficult to tell which specific countries want nuclear weapons. However, it is known that neighboring countries often seek nuclear weapons once those weapons are introduced into a region - which suggests Iraq is not the only one interested in acquiring them in response to their presence in Israel.

> I think it really boils down to not wanting to set
> a precedent of invading a country and overthrowing
> a govt. because a country half the world away feels
> threatened.

The suspicion over our policies existed long before the current invasion - the current situation only adds fuel to it.

> And the rest of the world did not stand up to Germany
> and stop them when it would have been easy to do so.

> And the USA refused to join the LEague of Nations,
> leading to that organization's failure.

Already addressed in the next paragraph after the one you replied to with this comment.

> Or maybe the West should not be so friendly with
> dictators. Didja see the pictures of Rumsfeld and
> Saddam shaking hands and smiling for the camera
> in 1983?

Sadly, we have a long history of that, Jim. After our defense of Kuwait, we placed a "king" right back on the throne in that country. As a result, the people there are only a matter of degree more free than they were during Saddam's occupation. And, of course, you're aware of many other examples. We do need to be more selective over our choice of friends.

> THAT is the big question. Is the USA to be the
> world's policeman?

We are at the moment. But, what do you think about the future in that regard? I'm just darn tired of endless conflicts. At fifty, there has not been a single decade in my life that we have not been at war with someone (occasionally several in one decade). And, as legitimate as those conflicts sounded at the time, I would have a hard time justifying many of those conflicts today. In the end, I would like just one decade when our soldiers stayed their butts home and we stayed out of conflicts. Sadly, it may be an impossible dream.

> What will happen to Israel if the USA cuts off
> support?

I don't think we have to cut off support to have a change in policy. We can simply more directly address the middle east issues without weighting our position so heavily towards Israel alone - a serious move towards the creation of a Palestinian state, an end to Israel's current military actions in Palestine and the occupied areas, and the eventual return of refugees to Israel are good examples.

Well, perhaps enough about Israel and certainly enough for this message. Responding adequately to comments about such complex issues really eats up time and I'm simply running short of that these days.

Dave, you let your "feelings" get in the way of objective, rational
thought. You continually try to redirect the the conversation to
driving or shooting or make it something personal with me.

And you couldn't be more wrong about what "answer" will satisfy me.
Too bad for you.

Brian

> Most of the rest of the oil-importing world pays about $5 gallon.

Do they pay more per barrel? Or do they pay more for inefficient
refining, tariffs, and taxes?

> The point is that in order to get a certain behavior, that behavior must be
> rewarded.

Easy. You restrict the kind of cars available for sale, and then
allow the consumer to choose anyting they want from the available
inventory.

Reimposing CAFE standards in a country with cheap plentiful gas will
> not cause people to buy more efficient cars. Initially, it will cause a rush to
> buy big cars before the requirements are enacted, and afterwards will keep
> existing big cars on the road longer. It also unfairly penalizes those who need
> a large vehicle, no matter how little or how efficiently they use it. Example:
> which is better - one 16 mpg minivan with 6-7 commuters carpooling, or those
> same 6-7 people driving their own 32 mpg econoboxes?

So you do know numbers. Sort of. Carpooling and minivans are a
result of those standards you don't like and say cannot be
reimplemented.

> If it's reduced fuel consumption that's the goal, then it's the price of fuel
> that needs to change in order to make reduced consumption the goal. That's
> W3RV's pint, and he's right on target.

Pint? It could be his whole quart and still be missing the target.

He said "$5/gal" and "real free capitalist market" in the same
sentence.

> Know why other countries have great transit and passenger rail systems? They
> partially fund 'em with fuel taxes.

Jim, I understand central place theory, transportation networks, and
urban planning. The places where mass transit occurs are place with
compact population centers, not places with urban sprawl. For mass
transportation to work in most places in the USA, you'd need to
reconstruct American society. Don't worry, the Socialists are already
trying.

All I suggested is the we limit the number of large, petrol using vehicles on the roads. Just like we successfully did in the 70's through 90's, till Clinton. And that's as socialist as I would ever want to get.

Today, trucks, vans and sport utility vehicles outnumber passenger car sales. And most trucks, vans, and sport utility vehicles carry only one person, the driver, and no cargo.

Do the math.

LMAO! BTW, remind me to NEVER make a long term wager with you. You've got a memory like an elephant. Besides, I believe I already owe Ed, W1RFI a lobster dinner (...or lunch?) re. increase 11m enforcement over the past two to three years. I will very happily pay this one off when I visit W1AW this summer. :-)

It is rational and objective thought which brings me to the conclusion
that a person whose maximum morse speed is five words per minute is not
proficient in the use or morse code. The driving, baseball hitting and
shooting analogies are good comparisons. My views are not at all based
upon feelings but upon experience and observation.

> And you couldn't be more wrong about what "answer" will satisfy me.

Prove me wrong.

> Too bad for you.

What are the possible "bad" consequences for me? There'll be no army of
5 wpm operators protesting in front of my home. My morse speed won't be
effected. Those drivers, batters, shooters and morse users who are not
skilled or expert will still not be skilled or expert.

Yeah, me too, the guy has never shown up to collect. He must be busy
with other matters. WRC-03 is coming up fast.

> I will very happily pay this one off when I visit W1AW this
> summer. :-)

I gotta get back there. Been ten years. Bring your license so you can
operate the station. Allow plenty of time, too - lots to see.

You're arguing about mileage standards and you don't know what "CAFE"
means. Nor will you even bother to look it up.

Try reading this:

http://www.policyalmanac.org/environment/archive/crs_cafe_standards.shtml

Note that mileage standards still exist, and the Clinton
Administration wanted them higher but couldn't get the bill through
Congress.
>
> > >The only people paying $5/gal are the

>
> Do they pay more per barrel?

Partly.

> Or do they pay more for inefficient
> refining, tariffs, and taxes?

Most of the price difference is taxes.
>

> > same 6-7 people driving their own 32 mpg econoboxes?
>
> So you do know numbers. Sort of.

A lot more than "sort of". Restricting the availability of minivans
will hinder carpooling Not a good thing at all. Carpools not only save
fuel, they pollute less, ease the parking problem and reduce traffic
congestion.

> Carpooling and minivans are a
> result of those standards you don't like and say cannot be
> reimplemented.

You're wrong about that. Carpooling is a result of higher fuel costs,
not mileage standards. Minivans were a Chrysler/Iaccoca idea, invented
because the market wanted something bigger than an Escort or Citation
station wagon.
>
> > If it's reduced fuel consumption that's the goal, then it's the price of fuel

Your posts don't indicate that at all, Brian. You sound like an auto
industry exectutive from the '50s and '60s.

> The places where mass transit occurs are place with
> compact population centers, not places with urban sprawl.

Transit doesn't just "occur". It needs to be championed and supported
by policy. Just like the interstate highway system and cheap gasoline
have been championed and supported since the end of WW2.

> For mass
> transportation to work in most places in the USA, you'd need to
> reconstruct American society.

Sounds like a good thing.

> Don't worry, the Socialists are already
> trying.

Who are "the Socialists"? Those who want to limit our choices of
vehicles for sale?
>
> All I suggested is the we limit the number of large, petrol using
> vehicles on the roads.

How? Outright ban, production quota, surtax?

> Just like we successfully did in the 70's
> through 90's, till Clinton.

You're blaming the wrong person. Clinton supported higher standards.
CAFE standards are still in effect. The problem with making them much
higher is that The Congress won't stand for it. Nor will Mr. Bush - he
won't even support the Kyoto accords.

> And that's as socialist as I would ever
> want to get.

Uh-huh. The govt. uses tax dollars to build roads, bridges and
airports - isn't that "socialist"?
>
> Today, trucks, vans and sport utility vehicles outnumber passenger car
> sales.

Because they are what most people want to drive. Think about WHY
people want to drive them. Hint: It's not because they like paying
more for fuel.

> And most trucks, vans, and sport utility vehicles carry only
> one person, the driver, and no cargo.

Tell the people who buy them. Ask them why they want such a vehicle
for on-road use.

Tell us how such a requirement is going to get through a Republican Congress and White House. You'd have more of a chance with Ralph Nader in the Oval Office.

And do please read up on CAFE standards. They're in effect right now, and the industry is meeting them. To eliminate or even seriously reduce oil imports without other changes, the standards must go much higher. And the effect is a very gradual one, because the on-road fleet turns over very slowly.

1675. Re:Morse code proficiency speed

Newsgroup: rec.radio.amateur.policy

Source record: 64061

From: brianburke@juno.com (Brian)
>How much higher than 10wpm?

The question is: "What is the minimum code speed for code proficiency?" The link below answers the question.

http://mvmpc200.ciw.uni-karlsruhe.de/~mvmpc9/public/NOS/HAM/HAMFAQ

I will quote the relevant part:
"That's the key to code proficiency. Copying code must be a thought-free process. When you hear a character, you should know, without thinking, what it is. It should be a REFLEX. In fact, copying above about 10 wpm can only be done by reflex.

10 wpm is the minimum speed where code can be copied by reflex and therefore is the minimum speed for code proficiency.

Individual variation of reflex perception may occur. However, lets assume the variance is small and 10wpm is the minimum speed for everyone.

Note that the reflex definition is based on the operator encoding/decoding perception, not on desirable communication rate. Slow as it may seem for some people (Normal voice conversation

I misunderstood. Now it's clear - thanks.

> However, as I understand it,
> Israel pushed out almost all Arabs once living within its borders, creating
> massive refugee camps in neighboring countries and in occupied territories
> once belonging to those neighboring countries. Am I wrong about that?

I think so. As I recall, most of those who left the new state of
Israel did so voluntarily, not wanting to live in a "Jewish" state.

> If
> not, that could certainly explain ill feelings towards Israel on the part of
> some Arabs.

As I recall it, old British Palestine was divided into various
sections according to religion and ethnicity. A town would have a
"Jewish quarter", an "Arab quarter", a "European quarter", etc. Not a
new system - goes back to antiquity. And the Brits kept the peace
more-or-less. But once they left, civil war broke out, and the Israeli
nationalists won.
>
> The land of Israel is also not valueless. It contains some of the most

Sure. But until the Israelis started caring for it again, it was not
in good shape.

> is the seat of several
> major religions, and was the only access to the Mediterranean Sea (a major
> trade route) for two of Israel's neighbors. In other words, the loss of
> those lands was a significant blow to the Arabs, again which may help
> explain the ill feelings.

I think it's much simpler than that. The new state of Israel was seen
by many of those who had been there for generations as simply a new
form of European intrusion into an area they had controlled for
hundreds of years. Recall that one of the factors in the Holocaust was
the unwillingness of many countries (including the USA) to admit large
numbers of Jewish refugees. Look up the ship "St. Louis" for one
tragic example. Israel was founded in large part to be a place where
any Jew would be accepted, no questions asked.

But it wasn't Arabs who built and ran Dachau or turned away refugees.
>
> Regardless, Israel is there and is not going to be destroyed. I think even
> most Arabs realize that at this point, in spite of the rhetoric.

I'm not sure Israel would survive if the rest of the world stopped
supporting it. Look at what happened to Kuwait in 1990.

But SH has a long bloody history of aggression against neighbor
states, including the use of chemical weapons against civilian
populations. And a long bloody history of human rights violations and
atrocities. Iran, Kuwait, and ethnic Kurds, as well as Israel, have
all been targeted by SH.

If Israel hadn't gone after that reactor in Iraq back in 1981, SH
probably would have had nukes by the time of the first Gulf War.

Sure - lookit the Shah of Iran, Noriega, Marcos, etc., etc.

> After our defense of Kuwait,
> we placed a "king" right back on the throne in that country.

A friendly king. The coalition restored the government of Kuwait.

> As a result,
> the people there are only a matter of degree more free than they were during
> Saddam's occupation.

I have friends who fled Kuwait in 1990 just ahead of SH's tanks. They
tell a very different story.

> And, of course, you're aware of many other examples. We
> do need to be more selective over our choice of friends.
>
Much of this is left over from the Cold War, when the USA would be
friends with all sorts of folks in order to prevent them from being
friends with the USSR. Now the USSR is gone.
>
> > THAT is the big question. Is the USA to be the

> time and I'm simply running short of that these days.

Me too! But the real solution to these problems will come from
ordinary citizens voting for politicians who will look long-term
rather than crisis-to-crisis.

Glad you brought this up because it is my opinion that the Israeli mauling of the Palestinians for the past 56 years is the root cause of the mess we have today in the mideast. I think it's been obvious that at some point in history the soverign nations of Palestine and Israel *will* coexist on that patch. I have reservations about the legitimacy of the Israeli claims to it's piece of the patch but never mind that.

The assorted regimes in the White House & Congress have never used our leverage to force an end to that conflict. While we've been "patiently" waiting for the old warriors (Arafat, Sharon. etc.) to quit shooting at each other for the half century the Arab world has finally had it with our blind, unswerving support of Israel at the expense of the Palestinians and is lashing out. And in a sense I don't blame them.

I daresay that if we'd jumped into the conflict 25-30 years ago and banged their heads together until they signed the treaty the World Trade Ceter would still be standing and we wouldn't be in Afghanistan and Iraq.

You bet we have the leverage to make it happen. The last numbers I saw stated that Israel is kept economically afloat by annual four billion dollar handouts from us. Wherein lies the answer to your question.

Just an observation--I have not checked for accuracy, etc. In its comments to the UN Security Council, the Syrian representative stated that [paraphrased] the Council was being asked by the United States for serious measures against Iraq to be supported, due its (Iraq's) violations of UN Sanctions while no one is saying a thing about Israel's violations against UN Sanctions toward it (Israel). I either have forgotten or never knew that Israel has UN Sanctions...

In reality, half the countries in that region have sanctions or resolutions against them - Turkey and Greece (their fight over Cyprus), Syria, Iraq, Iran, Israel, and others. We tend to ignore or focus on those sanctions and resolutions as it fits our agenda - ignoring those against our friends and focusing on those against less favored nations. Some feel a little consistency on our part might move things along better in the Middle East.

1681. Address Change

Newsgroup: rec.radio.amateur.policy
Date: 2003-04-03 04:19:52 UTC
From: tcarlisle01@yahoo.com
Message-ID: <c1fc7883.0304022019.2d4f82fc@posting.google.com>
Source record: 64068

I need to update the home address on my Ham License. I have the Quick Form 605 application, but I'm not sure where to send it. At the bottom is says not to return it to the FCC, but it doesn't say where it should go.

Thanks

TC

Again, I would not want support for Israel to end, by us or anyone else. But that doesn't mean we can't take a more balanced approach to resolving issues in that region. Many of the problems today are a result of years of conflicts. We have to take that into consideration when addressing issues today. In other words, we can't go in there pointing a finger at one group without understanding why that group is doing what it is doing. Once we understand, we may better understand what is needed to address that issue and end the conflict. The next part is even harder - getting to two to stop fighting long enough to actually do something positive.

> (snip) And a long bloody history of human rights

> ethnic Kurds, as well as Israel, have all been
> targeted by SH.

The Kurds are a interesting story. They have been a thorn in the sides of Iraq, Iran, and Turkey for perhaps centuries. I lived in Turkey in the mid 60's and remember raids by Kurds into Turkish towns along the Iraq border. They would attack towns, steal what they could, and rush back across the border before Turkish troops could respond. Kurds living in Southern Turkey did the same to towns across the border in Iraq. As I understand it, this has been going on for centuries, even back to the Ottoman Empire (Kurds would raid towns and hide in the mountains to avoid detection). Of course, none of this justifies the use of chemical weapons, but it does perhaps explain why Iraq might want to do so and why Turkey is so interested in getting into the Kurdish regions of Northern Iraq today.

> I thought you were younger! I'm 48, and I have the
> same memories.

Heck, we're almost into the senior citizen category now. Magically, when you turn 50, you start getting advertising for senior benefit insurance plans and so on in the mail. I get stuff like this several times a week now. However, I have not signed up for any of it yet - a stubborn refusal to admit I'm getting old.

And, if you complain, they insist they have access to information you don't have - which does somewhat defeat the concept of a democratic government ran by the people, doesn't it? In reality, they get their information from the same sources we do (news agencies) and then slap a secret stamp on any information so we can't judge their actions.

> Oh well...

I'm sorry, Kim. The rant about political parties was a little off topic (even for the thread), so I didn't dwell on it. However, if you want to continue the discussion, I'm more than willing.

Once upon a time this newsgroup was the correct place
for such questions (and answers). No longer.

This newsgroup has become a CHAT ROOM for geopolitics
and solving Middle East issues by the PCTA. :-)

>own. It's part of your little problem.

Hmmmm...Let's see....

YOU insist that I am "obsessive compulsive", yet you continue to go tit-for-tat in these little exchanges despite having been given ample opportunity to tactfully withdraw.

You insist that your T5 operation was "authorized" yet you cannot (or will not) provide us with the name of the person who allegedly gave that permission.

You further refuse to even make available any log excepts so that we can make some efforts to validate that you indeed DID operate from Somalia while deployed there.

Youn further insist that I (and others on occassion) make assersions that we never did, then never provide the quote proving where we made the statement you insist upon.

Seems YOU are the one with the problems, Brain. Truthfulness and a lack of facts being two of them.

Hmmmmmmmmmmmm........

Send it to the FCC at 1270 Fairfield Road, Gettysburg, PA 17325.

If you are going to try and send it via a postal or commercial carrier,
they now haev an off-site delievery at 35 York Road, Gettysburg. But if all
you are sending is a non-feeable renewal or modification, the 1270 address is
the place to send it.

Good luck!

73

>To me.

Then I guess we just need to get hot re-writing all federal regulations to save you some embarrasment, Vippy!

>If I were to mention I belonged to a Ham radio club and the person asked
>me if they still used Morse code.

What absoute silliness. You can do better than this,Vippy.

>Its also bad for the hobby. It scares away the technical people, who might
>have
>benefitted the hobby. It looks bad for the hobby when the only "real" skill
>is
>Morse code.

If a "technical (person) is "scared away"from the Amateur Radio service over the idea of taking a five word per minute Code test, and then ONLY if they want access to HF, then I say WHO NEEDS THEM...?!?!?!

Any "experimenting" of any consequence is being done at or above the VHF portion of the spectrum, Vippy, and that requires NO Code test.

Your "argument" is a tissue of lies.

>>The Radio Police dragged themout in the street in the middle of the
>>night and tortured them until they signed statements professing thier
>undying
>>loyalty to Morse Code.
>
>No, but from talking to club members, at least two (one is club Prez!) said
>they were resistant to learning Morse code, but claim to like it now. I guess
>social pressure works.

There was a lot I didn't want to have to do in Nursing School, yet had to get through it in order to get where I am now. None of which, byt the way, has been manifested in my years in the ER.

>>Vipul, you recommend trashing the technical written tests and then say MY
>>comments about that suggestion then failing to meet Part 97 is
>>"illogical"...?!?!
>
>It seems you don't understand my proposal. I did not reccommend trashing the
>technical written test.

Then the problem is with YOUR use of the English language, because that's
exactly what you said!

>I said keep written tests, but put Morse code out of pathway of written
>tests.
>No need to pass Morse code test to get General license or Extra license.

Sure there is. It's right there in Part 97. And that requirement is
there because of the United States' compliance with treaties that it is
signatory to.

Do you condone breaking the law?

>But, no HF for passing only written tests. If one passes code test (provided
>they pass tech written test) they can get on HF.

That's the way it is NOW, Mr Wizard.

>This compromise should satisfy Morse code lovers and no coders.

You continue to make yourself sound really stupid, Vipul.

You said: "But, no HF for passing only written tests"

That IS the way it is now...In the United States, anyway.

You said: "If one passes code test (provided they pass tech written test)
they can get on HF."

Again, that is exactly how it is today.

>Do you understand this or do I have to draw a flowchart?

You can draw me a lewd picture of Spongebob and Catdog if you want, but
you STILL won't prove anything. We're close enough to a completely code test
free license that now matter how YOU color it, it's irrelevent.

>effort. It also shows misplace priorities. More importantly, I don't like
>Morse
>code. I could be doing much more interesting things in its place.

Without having tried it, how can you know?

Every year I know of people who make the same claim UNTIL THEY TRY IT.

If you're the rocket scientist you claim to be, Vippy, learning it is a couple days worth of effort at most...Certainly the time you waste on RRAP and RRCB posts alone would get you up to five words per minute.

Tell ya what, Vippy...I have a 0-to-5 WPM tape here a the house that I'd be glad to send yuo at MY expense...the only thing I'd "need" from you is a promise to listen to it and then pass the test.

Personally, I have $20.00 says you can't study and pass that 5WPM by April 30th. You just don't have it in you. "Proof" will be your upgrade to General in the FCC database. (YOU said the writtens can be done in a day...let's see if your word is as good as you say...)

Shall I send this to your QRZ address?

Sure she is...ANYone is, Vippy.

YOU have stated you don't know code and that you refuse to learn it.

THAT makes YOU unqualified to make ANY judgements on how effective or
useful it is.

>>Experience in its use is the only
>>way to judge it's usefulness.
>
>Please realize that you can seperate the acutal memorization of the encoding
>scheme from its mathmatical analysis. Knowledge of the encoding scheme is NOT
>needed to evaluate its usefulness.

Wrong.

>There are other ways to gain the experience needed to evaluate Morse code's
>usefulness.

And without being an active practitioner of the art, how would YOU do
that, Vippy?

>those that have the experience have not reached the conclusion that Morse is
>so
>useful, as many Hams claim.

And WHO are "they", Vipul?

>Hospitals, firefighters, Coast Guard, Pilots, Military, other "emergency"
>functions do not use Morse code.

Pilots, the Coast Guard and the Military DO use Morse Code, Vipul.

No nearly as prolificly as years ago, but they DO use it. I suggest that
you take any receiver capable of tuning below 500 kHz and tune slowly. Morse
Code signals abound. Also tune from 108.0 to 118.0 MHz. Even more Morse code
signals. Those are VOR's and VORTAC's use by civil and military pilots to
navigate by.

>Just because a mode does not require a computer, does not mean one should
>learn
>it.

Why not?

Morse Code is the ONLY "encoding scheme" that I can think of that could potentially allow a person to "communicate" directly with a computer. The spoken word is still subject to speech impediments and dialect inflections.

Whatta jerk he was . . I popped him with a bunch of binaries he
couldn't handle which really ticked him off and called him "cootie
boy" to boot. Those were "unrestricted warfare days" in this village.
The Putz went ape when I got into the subject of the neighborhood CBer
who had a 35kW rig in his Chebby Suburban. Another memorable thread.

Last I heard abt Cootie was that he'd sold all his ham gear and
evaporated.

by the MILLIONS of tons, and iconolizies "Spongebob" and "Catdog", we are
worried about how Morse Code might make us not "look good"...

Yeah....riiiiiiiiiiiight.

>>What priveleges would a person get from passing just the writtens?
>

Glad you agree.

>More bands for General and Extra class is not possible, as the Tech class got
>all the bands up front.

Then WHAT bands are being assigned to Generals and Extras now, Vippy?

>The General and Extra classes get they extra "prestige" of getting those
>licenses. Before you say "What good is prestige?", remember that Extra class
>right now offers basically the same thing (with only a few extra freqs) - not
>much more than General class priveleges.

I'd be interested in knowing where you came up with this from, Vippy.

Let's consider the HF bands in general where Amateur privileges are
divided by classes:

On the 80 meter band, Amateur Extras have access to the full 500kHz of the
band. Amateur Generals only have access to 275kHz. Discounting the bands
shared with the now stagnant/declining Amateur Advanced class license, this
bestows an additional 225 kHz of spectrum to the Extra over the General, or
about 45%.

On the 40 meter band, Amateur Extras have access to the full 300kHz of the
band. Amateur Generals only have access to 200kHz. A nice "round" 33 1/3
percent more spectrum than the Generals to be had here.

On the 20 meter band, Amateur Extras have access to the full 350kHz of the band. Amateur Generals only have access to 200kHz. This is an extra (pardon the pun) 150kHz of spectrum.

And on the 15 meter band, the last band where by-class sub bands are manifested, Amateur Extras have access to the full 450kHz, while Amateur Generals have access to 325kHz.

All-in-all, this is 600 kHz of 1600kHz...NOT a small percentage. About 37% increase according to my table top napkin computations.

By the way...the added privileges are by virtue of a written "technical" test...NOT a Morse Code test as would have been required a few years ago.

In case you didn't notice...

Steve

Wow, Brian, that was some statistical work! Your mistake is that mo one is tested at 13 wpm any more. This means that no new hams can be qualified as proficient. In addition, there is not a statistic on how many of the new extras are upgrades from earlier (higher CW speed tested) Generals or Advanced Hams. In their case we just don't know.

Yes. One must submit to Ca customs when coming in from the USA, its governments (state and local) ignore the U.S. Constitution and courts, law enforcement techniques are more like those in Iraq than in the U.S.A., etc., so ....

All true.

But there is also the issue of "rewarding the unwanted behavior". If
repeated suicide bombings and terrorism get results, those methods
will become more prevalent.

> The next part is even harder - getting to two to stop
> fighting long enough to actually do something positive.

More than 20 years ago, President Jimmy Carter actually got the
leaders of Israel and Egypt to sit down and come to an agreement.
Israel gave back almost all the land it had conquered in the Six Day
War. And throughout all that has happened in the intervening years,
Israel and Egypt have lived by those Camp David accords. So it CAN be
done.

Unconfirmed legend has it that Carter simply wore them down with good
manners, Southern hospitality and old Georgia peanut farmer stories
until they would sign ANYTHING just to get out of there.

Indeed.

Another element that has escaped much notice until now is the fact
that much of northern "Iraq" is actually controlled by Kurds, not SH,
and has been for years.

The concept of nation-states with central governments, rule-of-law and
fixed, respected borders is actually much more of a Western Civ idea
than many Americans realize.

Here's a "what if" for ya....

One of the main reasons for the war is to eliminate SH's WMDs. But no
WMDs have been found by coalition forces yet - just lots of protective
suits. Protective suits aren't proof that anyone has or will use WMDs
- coalition troops have those suits, too.

What if Bagdad falls and the regime changes, but no WMDs or evidence
of same are ever found? Coalition will look like the aggressor and SH
as a martyr who told the truth. Which may be his plan all along. Talk
about a recruitment tool for OBL....

I dunno about that one way or the other, Kim.

But I cannot recall another instance of senior State Department
officials resigning because they cannot support American foreign
policies.

Take a look at:

http://www.snopes.com/politics/soapbox/wright.php

to see the resignation letter of Mary Wright. Note her extensive government service and reasons for quitting. Hardly a wild-eyed radical.

I'd say it's more in the order of "My mind is already
made up, don't confuse me with the facts!"
They could understand IF THEY WANTED TO!

Look how many years we have been searching for
the "MISSING LINK". Have they ever found it?
Nope! That don't change their minds though. It's
there, somewhere, we just haven't found it yet.
They just keep saying it's true until it happens.

My mother told me once to wish in one hand and
crap in the other, then see which fills the quickest!

You may be right. It's getting to be pretty much the same old thing. And now we have Lennie2 (Vippy)...yet another "engineer" who can't reason his way out of a tub of hot water, and Brain, who STILL can't get his definitions right.

Hohum.....

Interesting. I believe that there were 250,000 amateurs when I was first licensed in 1962. Seems the numbers just keep going higher. I'll keep watching this thread and see if "Cutie Boy" wants to make good on this one ;)

>Steve, don't confuse the poor lad. He hasn't heard of HF yet.

Yeah, Dick...It's really embarrassing to see these "engineer" types get confused with facts.

Jim Miccolis is an engineer...How do you think he turned out to be an alright guy, but these other "engineers" (ie Vipppy and Lennie) can't reason thier way out of a paper bag?

Funny, isn't it...?!?! (Or is it more pitiful? I haven't decided which yet...

Good Man! If enough people ignore the trollers, they will find another
place to fish. They don't have anything to add, and their expressed
views are outrageous enough that there's no worry about them finding
many converts.

>useful it is.

Tsk, tsk, tsk. Circular logic and self-congratulatory, too.

If one has demonstrated skill in morse code, it is then "effective and useful?" For ALL? No, only for the one individual. Federal radio regulations apply to ALL not just one individual.

Once upon a dim prehistoric time, before the life existance of Steve the Air Ace, morse code skill MAY have been useful in radio. No more.

Morse code mode communications is NOT effective or useful EXCEPT to use as self-congratulatory bragging points to use against others.

In the last half century a number of NEW radio services have come into being. ALL of those new radio services didn't bother to consider morse code modes. Older radio services either didn't bother with morse code skills as a requirement or dropped such skills. Only amateur radio requires such "qualifications" for an amateur radio license having below-30-MHz privileges.

Old morsemen refuse to give up their bragging points citing a bunch of mthology and half-truths that is older than they. If morsemanship is no longer required for licensing, those old morsemen will lose all their bragging qualifications. They will "lose face" and no longer be able to lord it over other amateurs.

>>There are other ways to gain the experience needed to evaluate Morse code's
>>usefulness.

>that, Vippy?

More circular logic. Tsk, tsk, tsk.

Steve the Air Ace has a hammer and thinks everything else is a
nail. :-)

>>those that have the experience have not reached the conclusion that Morse is
>>so useful, as many Hams claim.
>
> And WHO are "they", Vipul?
>
>>Hospitals, firefighters, Coast Guard, Pilots, Military, other "emergency"
>>functions do not use Morse code.
>
> Pilots, the Coast Guard and the Military DO use Morse Code, Vipul.

Private and Commercial aircraft pilots are NOT tested for
morsemanship by the FAA or any other agency.

The US Military does NOT USE morse code for any sort of
radio communications. US Military Intelligence does teach
morse code cognition for interception of enemy communications
as part of electronic intelligence gathering activities but it does
NOT USE morse code skills for communications.

> No nearly as prolificly as years ago, but they DO use it.

The US Military DOES NOT USE MORSE CODE for
radio communications.

>I suggest that
>you take any receiver capable of tuning below 500 kHz and tune slowly. Morse
>Code signals abound.

"Abound?!?" So does QRN and QRM.

There are NO US amateur bands allocated below MF. None.

>Also tune from 108.0 to 118.0 MHz. Even more Morse code
>signals.

Oh, wow, the automatic ID keyer requirement means "morse
is USED in air navigation?!?!?" No, no, no. That automatic
keyer is there as a left-over requirement from 50+ years ago.

>Those are VOR's and VORTAC's use by civil and military pilots to
>navigate by.

Not quite. VORs (Very high frequency Omnidirectional Ranges)
and Localizer beams share that, interleaved on 0.1 MHz
increments. Localizers are rather narrow azimuth beams for

aircraft positioning to set up approach for landing. VOR was developed from the US Military TACAN (TACtical Area Navigation) and shares much of the technical basis of operation with TACAN. TACAN operates in low L-band microwave frequencies, not VHF. Decades ago the US Military and FAA cooperated on installing both TACAN and VOR on many ground stations and the combined equipment service was dubbed "VORTAC" (an acronym of acronyms).

Only a fanatic morseman would think that "pilots use morse to navigate by." In actual practice there's absolutely NO need to use any sort of morse code if a pilot knows approximately where he/she is within several hundred miles. FAA has set up VORs such that there isn't any possibility of one VOR interfering with another by high-altitude aircraft. VOR receivers are crystal-controlled. Reception is line-of-sight. Relatively low-power VOR ground stations are either there or not there to aircraft. It is quite easy to determine which VOR is which without any need for "reading" the slow-speed morse automatic ID keyer. Since that keying is audio tone and carried on the "voice" mid-band of VORs, any ground station has the opportunity to use the voice part as supplementary control information...the keying would not be heard under such conditions.

VORs use 30 Hz AM at 30% modulation for the "rotating beam" (literally rotating the RF beam) and a 30 Hz reference phase carried as FM on a 9.96 KHz sub-carrier. A phase comparison subsystem in the VOR receiver allows determination of the aircraft's azimuthal positioning to a VOR ground station by comparing the two 30 Hz phases. There is plenty of room between 30 Hz and 9.96 KHz to send audio information from ground to aircraft. VORs, Localizers, Glideslopes (UHF) are all coordinated in carrier frequency relative to VORs so that one radionavigation receiver tuning control will select all three if that feature is built into aircraft equipment.

VOR's inception dates to 1955 for the International Civil Aviation Organization, slightly earlier for the USA which developed the elegant (for vacuum tube based receivers) system. There was more morse used 48 years ago than today and it was common practice to have ground stations use automatic keying IDs in several services...by regulation. There has been no movement to eliminate the automatic keyers since their reliability keeps them auto-keying away on audio (not the carrier) and the audio voice portion exists since it is an AM system for both azimuth phases. Any use of the audio portion for ground-to-air communications will override the keying.

Frequencies and general characteristics of US civil aviation radio service is found in Part 87, Title 47 CFR. Any local aviation publication store will have "sectional" charts from the

US government showing all details on ground station
frequencies, their ID, even the dot-dash coding for the slow-
speed automatic ID keying shown in dot and dash symbols.

Civil aviation pilot license tests do NOT require morse code
cognition "by ear" tests in the USA.

>>Just because a mode does not require a computer, does not mean one should
>>learn it.
>
> Why not?
>
> Morse Code is the ONLY "encoding scheme" that I can think of that could
>potentially allow a person to "communicate" directly with a computer. The
>spoken word is still subject to speech impediments and dialect inflections.

Utter nonsense by the Air Ace. Speech recognition programs
have been around for years. Some of them are commercial. As a
case in point "Dragon Naturally Speaking" was available in 1998
(in my case bundled with the WordPerfect 8 upgrade, complete
with a little headband mounted microphone, no extra cost). It is
still on the software market. Like all recognition programs it needs
a learning practice for the individual user. It works but then I've
been a touch typist since middle school and am faster and more
comfortable with keyboard entry.

Children younger than 4 learn speech recognition, complete with
various speakers' dialects, impediments, and so forth. Computers
are machines, not human beings, cannot "learn" anything without
appropriate hardware and software.

A number of years ago a programmer friend developed a "morse
code recognition" program as an intellectual exercise in making a
self-adaptive program, adjusting itself for word rate (actually
character speed), dot versus dash ratios, and some ability to
distinguish signal from noise without going into DSP techniques.
It worked quite well by test with a receiver input (my Icom R-70)
using a simple hardware interface between receiver output and
parallel port on the PC. According to some monitoring morsemen
it worked very well although two of them got in a running argument
between themselves as to which was "more skilled." :-)

they
>want access to HF, then I say WHO NEEDS THEM...?!?!?!

Tsk, tsk, tsk. ELITISM!

Real Hams work DX on HF with CW.

> Any "experimenting" of any consequence is being done at or above the VHF
>portion of the spectrum, Vippy, and that requires NO Code test.

Unbelievers get to the back of the amateur bus and cannot
drink from the same fountains as Real Hams (who can do
morse).

> Your "argument" is a tissue of lies.

Steamy is straining his schizophrenia while salivating again...

> There was a lot I didn't want to have to do in Nursing School, yet had to
>get through it in order to get where I am now. None of which, byt the way,
>has been manifested in my years in the ER.

Poor baby. Steamy screams curriculum vitae in a radio newsgroup
and then goes on about non-radio nursing and non-radio licenses?

Tsk, tsk, tsk.

> Then the problem is with YOUR use of the English language, because
>that's exactly what you said!

Tsk, tsk, tsk. Normally the doctor practices English without a
license (after years in ER) and almost makes it through a whole
posting without typo or bad sentence structure. It's gotta be
some sneaked-out Prozac.

>>I said keep written tests, but put Morse code out of pathway of written
tests.
>>No need to pass Morse code test to get General license or Extra license.
>
> Sure there is. It's right there in Part 97. And that requirement is
>there because of the United States' compliance with treaties that it is
>signatory to.

Doctor Killgore, after years in ER, is about to state "something
up with which he will not put" ---

> Do you condone breaking the law?

THOU SHALT NOT BREAK THE HAM LAW!!!

THOU SHALT NOT EVEN THINK OF CHANGING HAM LAW!!!

Why does the ham fantasy forbid CHANGING LAW?

All this "breaking the law" nonsense sounds like output from the
Hamish Ministry of Information psycho-babble and denial.

>>But, no HF for passing only written tests. If one passes code test (provided
>>they pass tech written test) they can get on HF.
>
> That's the way it is NOW, Mr Wizard.

...and so must it be forever more for the mighty macho morsemen.

>>This compromise should satisfy Morse code lovers and no coders.
>
> You continue to make yourself sound really stupid, Vipul.

Yup, output right out of Bagdad daily propaganda releases,
A few words changed to make it apply to morsemen and
their mighty macho accomplishments.

Anyone against Dr. Kilgore's opinions is automatically "stupid,"
a "liar," or, Maxim forbid, a "pathological liar!" :-)

>>Do you understand this or do I have to draw a flowchart?
>
> You can draw me a lewd picture of Spongebob and Catdog if you want, but
>you STILL won't prove anything. We're close enough to a completely code test
>free license that now matter how YOU color it, it's irrelevent.

Why does Dr. Kilgore need "lewd pictures" to comprehend a
hobby radio regulation or a change in federal law? Bizarre
behavior in a sexless technical avocation...

Get mental help, Steve.

>we never did, then never provide the quote proving where we made the
>statement you insist upon.

Who is this "Youn?"

Tsk, tsk, tsk, not only medically discharged but also making
with bad English sentence structure.

> Seems YOU are the one with the problems, Brain. Truthfulness and a lack
>of facts being two of them.

Ah, Kop has the "answer"...anything against his opinion is a
"lie" and probably "pathological" as well. :-)

Get help, Steamy, before everyone decides your medical discharge
was due to mental, not physical problems.

Tsk, tsk, tsk. My source was numbers from the United States
Department of Defense. They should know since they are the
source of "Collier's and Brittanica" casualty data. :-)

On the other hand, Robeson may have a dispute with the DoD
since they are the responsible department from which his
medical discharge originated. Tsk, tsk, spite in action again.

Polish.

It's only embarrassing to see the amateurs spout off about things
they don't know. Poor them.

> Jim Miccolis is an engineer...How do you think he turned out to be an
>alright guy, but these other "engineers" (ie Vipppy and Lennie) can't reason
>thier way out of a paper bag?

Some amateurs can't type their way into a newsgroup... :-)

Miccolis is of the True Faith, a Believer in the Way of Morse.

Miccolis is too ashamed to admit who he works at "engineering"
for, only that he got a degree many years ago. Chances are,
Miccolis doesn't really do any "engineering" at all. He doesn't
read RF Design magazine, a trade periodical. He should have
caught the March 2003 issue. :-)

Believers in the Way of Morse are fanatics, some akin to the
fedayin of Iraq, while some use the same propaganda style as
practiced by the Iraqi Ministry of Information ("we are repelling
the aggressor invaders even now on the encircled outskirts of
Bagdad").

> Funny, isn't it...?!?! (Or is it more pitiful? I haven't decided which
yet...

Poor baby, no decision-making capabilities even while in middle
age. No wonder just a nurse and not a real medical doctor. Tsk.

Seems like it would be addressed to someone named "Vippy".

No thanks. I got a free code CD from my local club. I know I can do it, but
perhaps cannot do it in just under a month.

More importantly, I do not want to learn Morse code.

1725. Re: Anybody here have any new thoughts?

>
> You will, of course, provide us a reference to this milrestone?

Only those that are proficient at code are considered a "true" Ham, although some Hams forgive this and allow no-coders that are true to the other traditions.

Actually, the proficiency speed is 10 wpm, not 13wpm. I did provide a reference link in another post in this thread.

>
> Sure there is. It's right there in Part 97. And that requirement is
>there because of the United States' compliance with treaties that it is
>signatory to.
>
> Do you condone breaking the law?

It doesn't break the law. I'm surprised you did not see that.

No law that says Morse test must be passed for General class. Law says Morse code test must be for HF. My compromise proposal keeps that in place.

>YOU have stated you don't know code and that you refuse to learn it.
>
> THAT makes YOU unqualified to make ANY judgements on how effective or
>useful it is.

I can make use of expert's opinion of those that do know about it. Comm. Prof (also Ham radio op.) ,does not make claim about Morse in class. Class covered many encoding schemes, gives tradeoffs. As it uses OOK (on-off keying), Morse is the least complex modulation scheme. Didn't see Morse having better BandWidth or Bit Error Rate. Shall I ask this specific question to Prof.?

*By the way in class, Prof asked if anyone is a Ham radio operator. Prof said more people should have Ham license. Not one person in the Comm Theory class raised their hand. From seeing the class email list, one can see that some people in the class are in companies in the Comm field. You would assume a Ham license would be beneficial to them.

>Knowledge of the encoding scheme is NOT
>>needed to evaluate its usefulness.
>
> Wrong.

The encoding scheme (Morse) is different from its mode of transmission (OOK). One can use any (or all) possible "character(s)" for the calculations its evaluation. Knowledge of the encoding scheme is not needed to evaluate its usefulness. You do not know enough about encoding schemes to say this is wrong.

> Pilots, the Coast Guard and the Military DO use Morse Code, Vipul.
>
> No nearly as prolificly as years ago, but they DO use it. I suggest
>that
>you take any receiver capable of tuning below 500 kHz and tune slowly. Morse
>Code signals abound. Also tune from 108.0 to 118.0 MHz. Even more Morse

>code
>signals. Those are VOR's and VORTAC's use by civil and military pilots to
>navigate by.

Morse may be used somewhere, but Morse does not deserve the high emphasis that it gets in Ham radio. It is not THAT important. Placing that high emphasis on Morse takes away from the more important aspects. Even emergency comm. would get a boost.

From: Dick Carroll dickc58@att.net
>Steve, don't confuse the poor lad. He hasn't heard of HF yet.
I've heard of it and CQed on it. Just don't want to Morse on it.

From K4YZ:
>>Steve, don't confuse the poor lad. He hasn't heard of HF yet.
>
> Yeah, Dick...It's really embarrassing to see these "engineer" types get
>confused with facts.

These HF spectrum allocation "facts" do not affect my suggestion.

Don't you have to get the General class license to get those General class privileges? The General class test currently requires passing the Morse code test. You have to take a Morse code test to get those HF parts.

If you compare the current plan with my suggestion, you will see that no freqs need be taken away to accomplish my suggested change.

> Jim Miccolis is an engineer...How do you think he turned out to be an
>alright guy
…

He endorses Morse code and the "Ham" traditions.

From: lenover21@aol.com (Len Over 21)
> It's only embarrassing to see the amateurs spout off about things
> they don't know. Poor them.

Some Hams don't want to learn the truth.

>Chances are,
> Miccolis doesn't really do any "engineering" at all.

There's no shame in that. Thats probably true of most EEs. One big problem is many low level tasks are called Engineering. Some times a <real> technician job can be better that one of these Engineer titled job. One example is "Component Engineer".

>He doesn't
> read RF Design magazine, a trade periodical.

Real EEs don't Morse code.

> Believers in the Way of Morse are fanatics

True, it is advocated and code classes taught in a local club. Guest speaker from military came. Someone asked if they used Morse. Answer was no, Morse was not used.

Its self congradulation for learning an essentially worthless skill. This skill (Morse code) is elevated in importance above anything else. Its easier to learn this skill than a multiple of <worthwhile> skills.

>some use the same propaganda style

In another club, club Pres announces everyone should learn Morse. HF rig was bought for club and it was claimed that this shows the club supports "advancement of the radio art".

Same club members hates homebrewing, but poses for homebrewing photo. Noone in the photo likes homebrewing, but homebrewing photo is still on club website.

Sure you can. Take the bet, Vipul. It's easy money.

> More importantly, I do not want to learn Morse code.

At least give it a shot. That way you can honestly say that you dont enjoy
the code with the benefit of truly knowing exactly what you're talking
about. (Meant in a nice way, I assure you.)

Slick Willy declared a couple months ago that he fully supports Bush's
approach to Saddam. I forget his exact phrasing but it was something
like "Saddam has gotta go, period" essentially in support of a
unilateral military attack on the Iraqi regime if that's was what it
took.

That's another mistake.

Here's the biggie:

Brian writes:

"In May 2000, there were 469,398 Morse Coded amateurs."

How does he get this number?

Total hams: 674,792
- Technicians: 205,394

Difference: 469,398

"In March 2003, there were 35,148 fewer coded hams."

Total hams: 685,471
- Technicians: 251,221

Difference: 434,250

469,398 - 434,250 = 35,148

The problem is that Brian assumes all Technicians are not "coded". This is not a valid assumption, because FCC has been renewing all Technician and Tech Plus licenses as Techs since April 15, 2000. In addition, any Tech who passes Element 1 but doesn't pass any more written tests stays a Tech in the database even though they have Tech HF privs.

Len Anderson made this same mistake a year or two ago and refused to acknowledge it despite repeated explanations. He even proclaimed that no Techs have HF privileges, with or without CSCEs for Element 1.

Three mistakes so far.

He concludes with:

"There are fewer coded people in the USA today than there were 3 years ago. I just don't see Morse Code as a growth industry."

which completely ignores the fact that what really matters is code USE, not code TESTS.

>licensed in 1962.

That's about right.

>Seems the numbers just keep going higher.

But not in a linear fashion. Growth has speeded up and slowed down throughout
the history of ham radio.

For example, there were about 60,000 US hams in 1946. That number grew to
250,000 by 1963 - then growth stopped completely for the rest of the '60s.
Started up again in the 1970s, and now we're at an all-time high.

Dwight:

I'll have to say yes, it does. If any American, who enjoys the blessings
of freedom and democracy which have been secured for him or her
through the sacrifices made by those who willingly fought, suffered, and
died to preserve them is not also willing to do so himself or herself, then
they most definitely are NOT a "loyal Americans." They are merely cowards
living under the protection of their moral superiors.

Diplomacy will always be the preferred method for settling political
differences between nations. However, when diplomacy fails, as it
historically will when dealing with maniacal, totalitarian dictators such
as Saddam Hussein, then military might is the correct response.
Nobody likes war -- it is a last resort. However, it is a resort which must
be taken to eliminate the evil in this world. If you disagree, consider
yourself lucky to be living in America -- where millions of your fellow
countrymen have sacrificed to give you the right to your disagreement.

>about. (Meant in a nice way, I assure you.)

I know (don't ask how) real-time encoding/decoding can be fun.

Enjoyment is not the only criteria. Usefulness, relavance are important criteria.

Also, it is not a "two-way street" as you suggest. Once you learn code by reflex, you CANNOT forget it, according to some studies. So, I would not be able to say "I don't like it, I won't use it anymore". It will stay with me.

>> Do you condone breaking the law?
>
>It doesn't break the law. I'm surprised you did not see that.

Vippy, YOU said "No need to pass Morse code test to get General license or
Extra license".

Yes, thee IS a need. It's very specifically delineated in PArt 97.

I am surprised YOU did not see that.

>No law that says Morse test must be passed for General class. Law says Morse
>code test must be for HF. My compromise proposal keeps that in place.

No law except Part 97.

>I can make use of expert's opinion of those that do know about it. Comm. Prof
>(also Ham radio op.) ,does not make claim about Morse in class.

Without a name or callsign, your "comm prof" (sic) is just a figment of
your imagination as far as I am concerned.

>Shall I ask this specific question to Prof.?

Ask him who killed Hoffa for all I care. I am sure you will make up a
suitable answer either way.

>Morse may be used somewhere, but Morse does not deserve the high emphasis
>that
>it gets in Ham radio. It is not THAT important.

It's not that important to YOU. That is an opinion, NOT a matter of fact.

>Placing that high emphasis on
>Morse takes away from the more important aspects. Even emergency comm. would
>get a boost.

Some of the most proficient CW ops I know are also knee-deep in Emergency Services, homebrewing, EME, Public Service, etc.

Morse Code knowledge and/or proficiency does NOT in any way, shape or form prevent or detract a person from doing any other thing in Amateur Radio he or she chooses to do.

To assert so is to blatantly lie. Are YOU a liar too, Vippy?

>From: Dick Carroll dickc58@att.net

>>Steve, don't confuse the poor lad. He hasn't heard of HF yet.

>I've heard of it and CQed on it. Just don't want to Morse on it.

How did you "CQ" on it, Vippy, without a General Class license?

>These HF spectrum allocation "facts" do not affect my suggestion.

Sure it does...So far you haven't offered a single viable alternative to the way things are now. WRC-03 will, eventually, see the end of Morse Code testing as a prerequisite to an Amateur authorization on HF.

Your "suggestions" are crude, ill-prepared and do no answer the letter of the law.

>Don't you have to get the General class license to get those General class
>privileges? The General class test currently requires passing the Morse code
>test. You have to take a Morse code test to get those HF parts.

Yes, and YOU said no Morse Code test was required to get there. That was in error.

>If you compare the current plan with my suggestion, you will see that no
>freqs
>need be taken away to accomplish my suggested change.

That's easy enough because the FCC is not going to implement any new rules vis-a-vis Morse Code testing. Until ITU S25.5 is modified or deleted, you're stuck with it.

>> Jim Miccolis is an engineer...How do you think he turned out to be an
>>alright guy
>…
>
>He endorses Morse code and the "Ham" traditions.

So now a person who endorses Morse code and "Ham" traditions is an OK guy, when only two days ago you were slandering anyone who supported Morse Code...?!?!

Are you on drugs, Shah?

That is absolute bull crap, Larry. First of all, a willingness to kill has never been, and should never be, the judge of someone's loyalty to this country. Second, unless we now live in a military state, military service does not make one "superior" to other Americans. And finally, most who served in the military, including myself, will always strongly prefer a peaceful resolution over the failure of war.

> (snip) If you disagree, consider yourself lucky to be
> living in America -- where millions of your fellow
> countrymen have sacrificed to give you the right to

Larry, as a Vietnam era vet, I served in the military just like you did, and certainly came as close to war as you ever did (actual combat is not exactly a big concern for the typical Air Force Sergeant), so don't sit there on your pompous butt talking about being "superior" or more loyal.

The millions of fellow countrymen you described above didn't sacrifice so you could describe yourself as superior and other Americans as inferior or yourself as more loyal with others less so. In reality, to proclaim yourself more loyal or superior to other Americans is nothing more than a cruel slap in the face of what they actually sacrificed for.

At this point, both groups are caught up in an endless cycle of unwanted behavior and retaliation - and it is getting more difficult to decide which to assign to which group. I keep hoping for a great statesmen to come forward to truly move things along - to say we're going to do this in spite is the unwanted behavior of the other group. Since the Palestinians cannot do anything about their situation while Israel controls their fate, the burden of that ultimately falls on Israel. Perhaps in my lifetime.

> Unconfirmed legend has it that Carter simply wore
> them down with good manners, Southern hospitality
> and old Georgia peanut farmer stories until they

Probably true. Carter is a difficult person to get a grip on. I cannot decide whether I like or dislike him. He was a boring president, but certainly no worse a president than some we've had. But it would be hard to describe him as a good president. He did some good things, like the Camp David accords, and certainly deserves respect for that. I don't know.

I wrote an offhand comment (meant to be humorous) about that in another newsgroup... "Weapons of Mass Destruction will be found - even if we have to build them here and fly them over."

> Naw, we're just middle aged. You gotta be a lot
> older to be old nowadays.

Yep, the age associated with old age definitely goes up as I get older.

> My billion-dollar idea is to invent a furnace
> that can burn paper cleanly and efficiently.
> Could heat our houses on junkmail alone.

Actually, I think someone has already tried that (heating a house with junk mail). By the way, did you ever see that house out West built entirely from junk mail? I saw it on television one night - thought about forwarding my junk mail to help with future room additions.

He's got a point about the borders, Phil. California is the only state where, when traveling from another state, I've had to stop at border inspection stations manned by state employees, often backed by armed state troopers sitting in nearby vehicles, to answer questions about the contents of my vehicle. The only other place I've seen this here is on our national borders.

I wish that was the case. I learned code years ago (a kid in the Boy Scouts) and spent many months exchanging messages with neighborhood friends and fellow Boy Scouts using a flashlight. Sadly, I don't remember any code now - and listening to tapes for a short time certainly didn't bring it back.

Then forget the time constraint and just do it at your leisure. I had
to shoe-horn my code practice into a pretty busy schedule, so I really
do understand. But don't EVER say "no, I can't!" You can, even if you
don't know it yet.

Ok, no questions asked.

> Enjoyment is not the only criteria. Usefulness, relavance are important
> criteria.

With all do respect, your as wrong as two left feet here. CW's
usefulness and relevance to amateur radio are two very important
criteria IN FAVOR of learning the most basic (read entry-level) Morse
code skills. Many find enjoyment AFTER learning the basic 5-wpm and
find they wish to progress further.

> Also, it is not a "two-way street" as you suggest. Once you learn code by

It's not a disease, Vipul. I don't ride a bike anymore either
retaining the knowledge of how to poses no burden in my day-to-day
life. You're reachin' dude! It's far less effort to just do it than it
is to come up with the various excuses why it's unfair to have to
learn it for increased privileges. (Ah, the oft forgotten
word...privies, not rights.)

So based on this info, Element 1 is just an entry level exam and true
Morse "proficiency" is not required for HF privileges.

But obviously NOT so important that you can afford to take time to argue
and whine in here. Time that COULD have been applied to a study program.

>Enjoyment is not the only criteria. Usefulness, relavance are important
>criteria.

Having no practical experience from which to judge this, you are simply
spitting in the wind.

> people (Normal voice conversation

Experienced ham CW ops don't "copy" individual characters as such,
they "copy" words and phrases if the speed is above a threshold which
varies from op to op. This threshold is usually in the 15-25 wpm
range. At lower speeds the op has to copy character by character which
is royal pain in the butt when conducting "conversational CW" Qs. At
10 wpm taking it up the band and getting the drudgery over with on
phone is a much better idea. My definition of "CW proficiency"
therefore is some speed at or above the 15-25 wpm threshold depending
on the individuals, 10 wpm is *not* a "proficient speed". Not
counting weak signal and contest operations which are seldom
conversational in nature.

There is another aspect to consider: It takes time to build the
reflexes you mention. Cramming for and passing a 20 wpm code test for
instance does not build the reflexes or demnonstrate proficiency, all
it does is get the op past the test and nothing more. Unless the op
actually uses the stuff on the air for some considerable amount of
time his/her ability to copy 20 wpm usually drops like a rock shortly
after the test. Thus it is that there is a second threshold which is

defined by the number of hours it takes to create the reflexes which embed CW proficiency for life. The time required in the low ends of the bands running CW to get past this threshold is measured in the hundreds of hours.

Simply passing a 10 wpm or any other "wpm test" don't mean squat when it comes to a useful working level of CW proficiency.

I have no idea what Larry did in the AF. But I can assure you that just because one is wearing AF Blue does NOT mean he wasn't in the 'crap'.

Who do you think dropped down from the AF rescue choppers? Who do you think was on the ground with the Army/Marines putting in Combat Air Strikes? Who was walking around the perimeter of Ton Son Nhut, DaNang, Cam Rahn Bay, Bien Hoa, etc?

Accuracy transcends speed.
>
> So based on this info, Element 1 is just an entry level exam and true
> Morse "proficiency" is not required for HF privileges.

Which is exactly what I've been saying since the question was first
asked. If someone says their goal is to eliminate the Morse
proficiency test for an amateur license, then their goal has been
accomplished in the USA, because Element 1 is not a Morse proficiency
test. It's a basic skills test. QED

There are certain basic questions that have to be answered, though:

Does Israel have the right to exist as a sovereign nation?

Does "Palestine" have the right to exist as a sovereign nation?

> I keep hoping for a great statesmen to come
> forward to truly move things along - to say we're going to do this in spite
> is the unwanted behavior of the other group.

I think you meant to right "in spite *of* the unwanted behavior". And
you are right. Which is how Jimmy Carter got the job done.

> Since the Palestinians cannot
> do anything about their situation while Israel controls their fate, the
> burden of that ultimately falls on Israel. Perhaps in my lifetime.

WHOA! "Can't do anything about their situation"??? Sounds like
"learned helplessness" to me.

Have they tried nonviolent resistance? Not sporadically, mind you, but
as a widespread grassroots movement?

How about legal challenges through the justice system?

How about simply emigrating and starting a new life somewhere else?

Anybody can be a destroyer and simply blow things up - including
themselves. Becoming a productive person and society is much more
difficult. It took much more intelligence, work and skill to build the
WTC and the airplanes than it did to destroy them.

Remember the movies "Seven Samurai" and its Hollywood imitations,
"Magnificent Seven" and "A Bug's Life"? Simple lesson: The bandit
needs the farmer, but the farmer does not need the bandit.

I've never been to Israel, so perhaps the following questions seem
naive. But I'll ask them anyway:

- Can anyone who applies become an Israeli citizen, and get full
voting rights?

- What was Palestine like before 1948 in terms of agriculture,
industry, education, civil rights?

- Why have all of the proposals for a Palestinian state been rejected?
What was missing in those proposals?

> David accords, and certainly deserves respect for that. I don't know.

My image of him, based on a lot of different sources, is that he was
honest and straightforward to a fault. Think "exact opposite of LBJ",
who was his party's predecessor in the Oval Office. LBJ was am
intimidator and wheeler-dealer with a bucket of political IOUs who
knew where all the skeletons were buried. Jimmy Carter thought
politicians should do the right thing and not expect gimmees for doing
so. Guess who got his way more of the time?

Carter inherited all sorts of problems from his predecessors, most
notably a sort of nationwide identity crisis (remember the phrase
"crisis of confidence"?). He was also hampered by not having lots of
Washington IOUs, since he came straight from the governorship of
Georgia.

Perhaps his worst fault was taking bad advice from the likes of Henry
Kissinger, who advised him to admit the Shah of Iran to the USA.

Actually, these are CA Dept. of Agriculture stations and for those not at the Mexican border, you will find that they may be as much as 100 miles IN FROM the state border. Usually, the stop for a passenger vehicle is 20 seconds or less.

Which is why we need to remove the code-tape generals, advanced, and
extras from the rolls of the "proficient" when trying to quantify
Morse Code as a growth industry.

>find they wish to progress further.

Oh?

What is the International Amateur Radio Union's viewpoint on the relevancy of morse code testing? They are for eliminating it.

What is ARRL viewpoint? They were FOR it for decades but only lately have they taken a neutral stand, neither supporting nor against the code test.

What is the FCC viewpoint on code testing? FCC hasn't thought that the code test serves any purpose for 13 years.

What are SOME US amateur's viewpoints? Decidedly for it because they had to do it, therefore everyone else must do so.

With all due respect, Bert, I think you are full of snit... :-)

There's plenty of evidence of that in this newsgroup. :-)

On the other hand, there are those who will use any
accomplishment to elevate themselves as "superior" in
some way or another. Morsemanship is one of those.

>>Chances are,
>> Miccolis doesn't really do any "engineering" at all.

Obviously a military guest who was mistaken or LIED! :-)

The Way of Morse does not permit infidels.

>Its self congradulation for learning an essentially worthless skill. This
skill

>(Morse code) is elevated in importance above anything else. Its easier to
learn
>this skill than a multiple of <worthwhile> skills.

I agree, but cults are cults.

In the USA the ARRL has been preaching the Way of Morse
for decades. Since ARRL publications are the main source of
US amateur radio information, whatever they wrote for so long
has become "true mythology." It's a fine example of the Big
Lie technique.

Even now, so close to WRC-03, ARRL takes a neutral stand
on revising all of ITU-R S25 despite the IARU recommending
a full overhaul of S25, including the elimination of the morse
code test requirement.

>>some use the same propaganda style

>be taken to eliminate the evil in this world. If you disagree, consider
>yourself lucky to be living in America -- where millions of your fellow

>countrymen have sacrificed to give you the right to your disagreement.

Roll seems to be "clapping his hands" considerably in here,
having "sacrificed much" in order to become a "moral superior."

Part 97.1 (e): "Continuation and extension of the amateur's
unique ability to enhance international goodwill."

An examination of any Almanac covering world affairs will show
dozens of armed conflicts around the globe over the last half
century...nearly all involving countries which have amateur
radio licensees and are signatory to the International
Telecommunications Union. It would seem that the "unique
ability to enhance international goodwill" has not aided in
providing any aid to real international good will.

Any number of "moral superiors" in here show up from time
to time...such as the PCTA. Their essential "battlecry" is
simply Do As I Say Or Leave.

That's not diplomatic, just dictatorial.

That's not freedom of speech, just repression of dissent.

>borders.

Sorry, Dwight, but your implication of "inspection stations backed
by armed state troopers" seems a bit harsh.

California is a HUGE agricultural state. The gigantic San Joaquin
Valley is perhaps the best evidence of that...it takes a day to
drive its north-south length on Interstate 5. The mobility of the
public poses a threat to some of the agribusiness here through
(usually inadvertent) vectoring of insects which may damage
the fruit crops.

The California border inspection stations are there to reduce the
importation of certain products which may cause damage to the
large (principally fruit) crops. There are similar inspection stations
at California international airports and at harbors. It's a serious
thing to damage billions of dollars worth of crops that employ up
to a million workers. The economic consequences would not
be good for either California or the rest of the USA that enjoys
the agricultural products.

Are there "armed state troopers" at these "border crossings?"
Yes. California Highway Patrol is armed while on duty. Do they

have guns pointed at vehicles? No. By evidence of observation of many trips my wife and I have taken along I-5 up to Washington and back, there is seldom more than one CHP cruiser parked alongside the inspection station. Once we saw all of two such CHP cruisers, one empty and the other with only one CHP officer.

The questioning by (unarmed) California inspectors is a direct, perfunctory "are you carrying any fruit in the vehicle?" A simple answer of "no" will allow passage. Anyone who feels they have to argue the point will be requested to exit the vehicle while it is searched. Those individuals are naturally put out by not being able to give inspectors a hard time, poor things. The rest of us know the drill, obey the law, and we are inconvenienced only a few minutes of time.

California is the most populous state in the union with a large economy (approximately 16th largest national economy if the state was considered a separate nation). It is very large in terms of area and length (north-south driving distance will take 10 to 12 hours of continuous driving on highways at maximum lawful speed). Many easterners are against California for no other reason than pique and jealousy.

Actually those stations are often quite far from the border, they are
Agriculture inspection stations and are placed somewhere convenient between
the border and the farm land.

I don't mind them at all since I find California fruit and vegetables
taste better than what was available in any of the other places I've
lived. Whatever they think they have to do to keep it that way is
fine with me.

That's got to be an underestimate, California couldn't be worse than 5th or 6th. The G8 nations are supposed to be the 8 largest economies in the world, but the size of California's economy certainly exceeds that of Russia, Canada and Italy, and may exceed that of France (I'm too lazy to look).

OK, but remember, "fast" is a four-letter word... :-)

Come to think of it, so is "code." :-)

I've heard 6th, and I live in "the people's republic of California."

The actual dollar amounts are irrelevant in this newsgroup. One thing I am sure of is that the Gross State Product for 1998 was $1.1 TRILLION dollars. [that amounts to real money...:-)]

Another thing I'm sure of is some yahoo in the east getting all snarly and antagonistic and mumble something about "left coast" and other put-down attempts about "six land."

The best eating dates I've had come from Indio, California. :-)

"Incorrectly?!?!?"

Of course. Anyone who doesn't promote the beauty, majesty, effectiveness, etc., is always "incorrect," "mistaken," or even "lying." That's a given in the Archaic Radiotelegraphy Society chat room. :-)

>conversational in nature.
>
>There is another aspect to consider: It takes time to build the

This was, however, kind of a trick question, since how "proficient"
it is theoretically possible to be depends on the channel (I
would have expected the original poster to know this).

One difference between 20 wpm code and 0.02 wpm code, according to
Nyquist*, is that the former minimally requires at least a
16.7 Hz bandwidth at the receiver to allow it to be copied, while
the latter should be possible to receive through a 0.0167 Hz bandwidth
filter at the receiver. This potential 30 dB improvement in signal-to-noise
ratio may be the only thing which enables a Morse code signal generated
in the UK on 136 kHz to be detected in Alaska at all.

That is, 20 wpm might be uncopiable at 136 kHz on a path between the
UK and Alaska no matter how much practice you've had and how good you've
gotten, and 0.02 wpm Morse code might be just about as proficient as
it is possible to be under those conditions.

At this point the skilled Morse basher would probably point out that
you should theoretically be able to get a net improvement in throughput
by broadening the channel bandwidth and obtaining coding gain through
clever use of some of the additional bits available to make up for the
loss in signal-to-noise ratio (i.e. instead of running narrowband at
0.0167 Hz channel bandwidth, run "spread spectrum" at 1.67 Hz bandwidth),
but my (very limited) experience is that it is sometimes hard to actually
get this to work the way it is supposed to in practice. I suspect 0.02 wpm
could be a fairly proficient rate under the conditions.

Those with the practical experience apparently disagree about the usefulness of Morse code. The studies have been long done. The research is there. You just chose to ignore it.

> I am surprised YOU did not see that.

After reading Part 97 more carefully, I see its there.

>Without a name or callsign, your "comm prof" (sic) is just a figment of
>your imagination as far as I am concerned.

Other Profs, at the college, in the same field are not a Hams (I checked). Yes, its rare that comm Prof is a Ham, so I can see why you wouldn't believe me.

Antenna lab guy is a Ham, while Prof of that class is not a Ham (Possibly never heard of "Ham" radio). He wouldn't give me his call sign.

In one class meeting Comm Theory Prof said he said he was a Ham, and asked if anyone else is one. If antenna lab guy would not give me his call sign, surely a Prof would not give his callsign. And it would be wrong to ask your Prof's callsign.

>Ask him who killed Hoffa for all I care. I am sure you will make up a
>suitable answer either way.

The class covered many modulation schemes and their benefits/tradeoffs. Surely, I can ask him the benefit/tradeoffs of Morse code. It would be part of the subject matter.

I see Morse code as the least complex modulation scheme (from complexity chart). It does not place highest in BW or BER from the other comparison chart. Besides least complex, I can not see ANY benefits of Morse.

If I asked this question, perhaps you would not like the answer?

>It's not that important to YOU. That is an opinion, NOT a matter of fact.

It may be fun to some, but its not that important. Its not important to hospitals, EMTs, firemen, police, coast guard, FEMA, or the military. Now which emergency communication situation could I have missed? Surely they know of Morse's existance. Its not used because its NOT the most effective means of communications under these situation.

Morse code is only important to a certain segment of Hams.

>WRC-03 will, eventually, see the end of Morse Code
>testing as a prerequisite to an Amateur authorization on HF.

Thats even better than my compromise proposal. I hope that happens.

Why? You don't show yours.

Here's a hint:

Your numbers indicate that you consider the set of "noncoded" hams to be
equivalent to the set of hams with Technician licenses. That's simply not
correct.

>borders.

This is an agricultural inspection to keep parasites and other
pests from decimating the state's crops (California is still the
number one state in agricultural production and export), and
other Western states did have similar inspection stations when
I was doing a lot of cross-country driving in the 60s and 70s.

If the other states have abandoned that program, it's their
loss. I've never been impeded while passing through those
stations. Most of the time I get waved through without
stopping.

FCalifornia has the right as well as the obligation to make
such inspections.

Co-located with the Ag Stations are California Highway Patrol
Truck Inspection Stations, accounting for the presence of
"armed state troopers sitting in nearby vehicles". Does the
visibilty of the CHP on California's highways bother you? I
rather welcome their presence.

But Jimmie CANNOT. Poor baby. Still stuck in the 1940s in the constant re-creation of the Archaic Radiotelegraphy Society. His little morsepride is hurt...

FCC doesn't care about morse code USE as long as all amateurs meet the regulations. ALL allocated modes are optional for ALL US radio amateurs.

What is being discussed is the TEST for morsemanship, NOT the use.

I know..this, and the incident where terrorists used a pregnant woman to lure soldiers into range of a car bomb stiffened my support for this action more than anything.

A pregnant woman...?!?!?! Can there be anything more loathesome than how they used her like that? I guess those idiots don't realize that doing stuff like that only raises the hair on an American's neck more and really drives them to fight harder.

I got a laugh from Saddam's "Information Minister" urging more car bombings. I think we should have "checkpoints" set up with cardboard "pop-ups" of soldiers...These rags can just drive up...the pop-ups will appear, and they can then save America the cost of the munitions to off them all by themselves! One less camel-fornicating, Trabant driving idiot to deal with.

This is a cheap insult from an ignorant troll. Experienced amateur radio operators know that only crank-fed "pit" guinea pigs have the stamina to maintain peak generating capacity when operating portable/mobile for extended periods.

Yeah.

> What is the International Amateur Radio Union's viewpoint on the
> relevancy of morse code testing? They are for eliminating it.

Then why are there various countries that have stated that they will
retain their code test requirements even if the ITU requirement is
dropped? Most notably, Russia and Germany. Sadly, many amateur radio
"organizations" do not echo the sentiments of the majority of their
constituency. A fair vote scares the crap out of the NCTAs.

> What is ARRL viewpoint? They were FOR it for decades but only
> lately have they taken a neutral stand, neither supporting nor
> against the code test.

The ARRL "leadership" is basically made up of psuedo-politicians.
Their biggest concern appears to be keeping their jobs, even if it
means perching themselves "on the fence" rather then taking a firm
stance for wishes of the majority of licensed US amatuers.

> What is the FCC viewpoint on code testing? FCC hasn't thought
> that the code test serves any purpose for 13 years.

Shrinking budget and limited manpower make paper reduction and
decreased administration QUITE attractive.

> What are SOME US amateur's viewpoints? Decidedly for it
> because they had to do it, therefore everyone else must do so.

SOME? Let's put it to a vote!

> With all due respect, Bert, I think you are full of snit... :-)

Coming from an unlicensed USENET newsgroupie, I'll take that as a compliment, Len. Take care now.

Well, let's see. In just one paragraph Len demonstrates insults, ridicule,
name-calling, factual errors, and/or general infantile behavior. No emoticons
and no ethnic/racial/religious slurs.

Guess you're right back in form, Len.

> FCC doesn't care about morse code USE as long as all amateurs
> meet the regulations. ALL allocated modes are optional for ALL
> US radio amateurs.

Yup. FCC also doesn't care about SSB use, AM use, FM use, RTTY use, etc, etc.,
as long as all amateurs meet the regulations. ALL allocated modes are optional
for ALL US radio amateurs.

So? Is there a point to your repetition of this? Is it one of your mantras?

btw, FCC doesn't care about how old a ham is, nor how well they understand the material on the written tests, as long the tests are passed honestly and licensed amateurs meet the regulations.

> What is being discussed is the TEST for morsemanship, NOT
> the use.

Better catch up with the conversation, Len. And do check the subject line.

It's incorrect. Invalid. Untrue. The set of "noncoded" hams is not equivalent
to the set of hams with Technician licenses. Len Anderson made the same mistake
some time back.

> Why is it wrong?

Look it up. The answer was explained in detail on April 3 in this thread. It
was also repeatedly explained to Len when he made the same mistake.

1818. Re: Honest code elimination question...no flames please

From K4YZ:

I said:
>And it would be wrong to ask your Prof's
>>callsign.

Sorry, I do not know if Prof has callsign. He never said he had one.

In one class He asked "Is anyone in the class a Ham Radio operator". In same class he said "more people should get one.". From this, I assumed he had a Ham radio licence.

Noone claimed to be a Ham radio op, including those in companies that do work in the comm field. (I did not want to raise my hand).

I am no longer taking his class right now.

> Since you offer neither a name or callsign, I doubt you are talking about
>a real person.

Oh, really, You mean its fancy that there could be a Comm Theory Professor? How unlikely!

>Vippy, you identified types of persons and agencies, NOT "emergency
>communication situation(s)"

These agencies prepare for emegency situations.

>However in the seven you make reference to, three
>still have SOME use of Morse Code.

The word "SOS" is still used (see below). Any non-Ham knows SOS.

>Under WHAT situations? You do not set parameters of a "situation", you
>simply made reference to certain types of persons or entities.

How about survival situations. For example, in army survival manual, no mention of Morse code, except the word "SOS".

>Oh? Then why is the Armed Forces still TEACHING it? Why are there still
>ship-to-shore stations still passing traffic in Morse Code, Vippy? Why are
>there still THOUSANDS of NAVAIDS identifying in Morse Code?

Lots of systems are using old technologies, because they haven't updated their systems.Air traffic controllers often use outdated technology. Old technogies, equipment, and systems take time to update.

heh heh heh...You are much more patient than I, Dwight...because I don't *care* if a discussion is "off-topic" in this newsgroup. I love that argument, in fact, when someone decides "they" don't like what is being discussed. "That's off-topic;" "that has nothing to do with ham radio;" blah, blah, blah. But, if you go and check a few of their posts? hohoho, need I say more?

Anyway...naw, discussions about politics and politicians got boring years ago. All that's left to say is, literally, they do whatever they want.

Like I said, I still vote, but I don't even know why. My belief now is as long as they are not standing in my yard, I'm happy. They can have their idiotic playground...just leave me out of it. If it gets to the point I can't pay my taxes/work/etc, then I'll get upset. And, of course, they aren't going to let that happen to us, because then we do get restless....

You sure do have that right, Dwight. I know a lot of former military (my father being one of them) who have no where near the sentiment nor attitude that Larry has. Soldiers like Larry didn't go off to war (if he even did) to defend "my" country. They went off to war to legally shoot, maim, and kill other people then tell all of us how superior they are.

Telling is all they can do...because it's the other soldiers I love and appreciate.

Even from you I am amazed. I bet you would have made a good war protester in the 60s. Im sure General Giap would have personally given you the Hanoi peace prize.

You have just insulted anyone that has ever worn the uniform of this country, whether they actually 'went to war' or not. You own Larry and every Marine, Sailor, Soldier, Airman and Coast Guard member an apology.

ANY person, male of female, that served at ANY TIME, WAR OR PEACE deserves the RESPECT and GRATITUDE of the nation they served. NO EXCEPTIONS.

You being a 'military brat' should know of the day to day sacrifices they make. And when one does it for twenty or more years, then they deserve it even more.

Do you know of ANY National holiday for draft dodgers?

It's the strain of all those katapult krunches and the secret
missions for the USN on photographing bears. :-)

Kellie forgot that "binaries" don't get displayed here via most
URLs. He also didn't calculate anything for the "discussion"
about powering a multi-KW RF amplifier from a vehicle
electrical system in that way long-ago thread. That's okay
since Kellie might still believe that WW2 vehicles all had
28 VDC electrical systems. :-)

Too much morse will rot the brain, Brian, this is proof...

Actually, the inspection stations on I-10 and I-40 are both within a few miles of the state line, not "100 miles IN FROM the state border." At 100 miles in, they would be near San Bernardino or Riverside (which they obviously are not).

There is no implication other than the reality of the situation, Len. Those stations exist, state troopers are often parked there, and the only other place I've seen this is at our national borders.

> California is a HUGE agricultural state. The
> gigantic San Joaquin Valley is perhaps the best

> crops.

Len, many other states are involved in agricultural production without the use of state inspection stations along their borders. Why is California the only state in this country that stops American travelers at its borders, for this or any other reason? Why are travelers made to feel their food products are unclean because it was purchased elsewhere? Why aren't travelers reimbursed for the items seized at these inspection stations? I have traveled in and out of California many times in my life and have always felt uncomfortable about these inspection stations.

> The questioning by (unarmed) California inspectors
> is a direct, perfunctory "are you carrying any

> of us know the drill, obey the law, and we are
> inconvenienced only a few minutes of time.

So anyone who doesn't liked to be stopped and questioned at state check points while traveling across this country is really just a troublemaker. Nonsense. As long as free and unrestricted travel across this country is a right of all citizens, I don't like to be stopped at state check points for this or any other reason. And, as long as I'm obeying this nation's laws, not some local law passed to benefit fruit growers, it is really nobody's business what I'm carrying in my vehicle - perhaps I like the Orange I have

better then what can be purchased in California.

> (snip) Many easterners are against California for no
> other reason than pique and jealousy.

Don't try to turn this into an California versus "easterners" thing, Len.
I grew up in California. I've lived in California many times throughout my life. Most of my family, and my wife's family, now lives in California. None of that changes my overall impression of these inspection stations.

What of the many that -

1. Tried it and found it of NO enjoyment?

2. Have been in radio communications for years and never used it?

3. Noted that no other radio service uses it any more or never
planned to use it in that service at all?

4. Don't buy into the fantasy mystique of the Way of Morse?

5. Don't believe that time stands still with no progress in any
technology such as some olde-tyme amateurs?

>> What is the International Amateur Radio Union's viewpoint on the
>> relevancy of morse code testing? They are for eliminating it.
>
>Then why are there various countries that have stated that they will
>retain their code test requirements even if the ITU requirement is
>dropped? Most notably, Russia and Germany.

What about them? What has Russia done that is so notable
in either geopolitics or radio communications concerning
amateur radio?

Germany is at least venturing into some experimentation in
amateur radio technology (evidenced by European amateur
radio publications) but is no longer a world leader in radio
communications or electronics.

Nearly ALL countries are involved in expansion of commercial
radio-electronics with little regard for hobby-leisure pursuits
involving amateur radio and the furtherance of the morse code
state of the art.

>Sadly, many amateur radio
>"organizations" do not echo the sentiments of the majority of their
>constituency.

That applies to ARRL as well, the fence-straddler and do-little
organization for the ITU-R S25 restructuring who refuses to
take any position on the morse code issue now.

>A fair vote scares the crap out of the NCTAs.

It does NOT. Morse code mode is on the way of becoming
defunct, extinct to every other radio service in the world
except amateur radio. If the PCTAs continue their fantasy
and mythology of the Way of Morse, then they too will
become defunct, extinct, archaeological exhibits in a living
museum of archaic radio.

>> What is ARRL viewpoint? They were FOR it for decades but only
>> lately have they taken a neutral stand, neither supporting nor
>> against the code test.
>
>The ARRL "leadership" is basically made up of psuedo-politicians.
>Their biggest concern appears to be keeping their jobs, even if it
>means perching themselves "on the fence" rather then taking a firm
>stance for wishes of the majority of licensed US amatuers.

ARRL "leadership" is not my concern. They do NOT "represent"
me nor do they "represent" anyone but a minority of licensed
US radio amateur licensees.

ARRL does have a large enough membership and economic
means to lobby for the maintenance of the Archaic Radio-
telegraphy Society desires in a hobby pursuit and radio
regulations pertaining to amateur radio.

ARRL is not possessed of infinite wisdom in the radio arts
of any kind and is the survivor-champion of influence groups
in the USA in regards to amateur radio (the Radio Club of
America is the older survivor but does not concentrate on
amateur radio activities). Their propaganda has continued
in the vein of self-service and self-promotion for a half century.

>> What is the FCC viewpoint on code testing? FCC hasn't thought
>> that the code test serves any purpose for 13 years.

>
>Shrinking budget and limited manpower make paper reduction and
>decreased administration QUITE attractive.

NOT a viable reason considering that privatization of US radio
operator testing removes any, repeat ANY testing directly by
the FCC. That applied to commercial as well as amateur
licenses.

FCC is NOT an academic institution to "grade" amateur
proficiency in anything. They simply regulate US civil radio,
amateur radio being a small part of that. Operator licensing
is considered a tool of regulation, not a federal merit badge
of excellence in radio arts...as often thought by ARRL and
some fantasy/role-playing amateurs.

Believe it or not, the FCC has a record of progressiveness
in radio regulation...despite the politically-biased opinions
of political decisions forced on them. ARRL does not cover
that part of FCC activities despite the public evidence now
easily seen on the Web. Such is of "no concern" to ARRL
except as some space-filler newsy item in a publication or
useful in ARRL's self-promotion.

>> What are SOME US amateur's viewpoints? Decidedly for it
>> because they had to do it, therefore everyone else must do so.
>
>SOME? Let's put it to a vote!

Don't bother with the small sampling found in here.

The minority group "representative" called ARRL has created
the mythology and fantasy of radio excellence that has
become a Belief System embedded in the psyche of those
"some" radio amateurs. It is cultist in nature, founded on
the "leadership" espoused by ARRL and reinforced by years
of self-promotional propaganda.

The old-time licensees in here, achieving their "superiority"
in rank-title-status under the former US amateur radio
structure will have none of that. They fear loss of self-
esteem by being perceived as "lesser" under changes
lessening that beloved rank-title-status. They MUST
retain the code test in order to show their "superiority" in
one aspect of amateur radio. It matters not to them that
keeping such code testing affects thousands of others who
might also want to be licensed radio amateurs.

>> With all due respect, Bert, I think you are full of snit... :-)
>
>Coming from an unlicensed USENET newsgroupie, I'll take that as a
>compliment, Len. Take care now.

NO license is required to use the Internet or newsgroups. Never has been such.

News: I've been federally licensed in radio since 1956...just not in amateur radio.

Tsk, tsk, tsk. The veteran of "seven hostile actions" misdirects
to macho sex subjects and attempts to humiliate others.

Sociopathic behavior.

>>If I asked this question, perhaps you would not like the answer?
>
> Since you offer neither a name or callsign, I doubt you are talking about
>a real person. Your stories are weak and references are absent.

Example of "weak and absent references:" SEVEN HOSTILE
ACTIONS.

>>It may be fun to some, but its not that important. Its not important to
>>hospitals, EMTs, firemen, police, coast guard, FEMA, or the military. Now
>>which emergency communication situation could I have missed?
>
> Vippy, you identified types of persons and agencies, NOT "emergency
>communication situation(s)" However in the seven you make reference to,
>three still have SOME use of Morse Code.

They do NOT "use" morse code for radio communications.

The "seven hostile action" hero attempts repetition of mythology
and fantasy to prove his point. It does not prove a thing.

>>Surely they know of
>>Morse's existance. Its not used because its NOT the most effective means of

>>communications under these situation.
>
> Under WHAT situations? You do not set parameters of a "situation", you
>simply made reference to certain types of persons or entities.

Answer the question. If you can. It is doubtful you can.

>>Morse code is only important to a certain segment of Hams.
>
> Oh? Then why is the Armed Forces still TEACHING it? Why are there still
>ship-to-shore stations still passing traffic in Morse Code, Vippy? Why are
>there still THOUSANDS of NAVAIDS identifying in Morse Code?

Morse code cognition is taught solely for Military Intelligence
purposes on intercepting certain enemy communications. Morse
code is NOT used in US military radio communications.

Enumerate the "ship-to-shore stations still passing traffic in morse
code." In the USA and possessions, "morse code traffic" has been
done in anniversary celebrations for one-day periods.

Robeson has been informed of modern-day aircraft radio-
navigation procedures which were existance before he could
be qualified as any sort of aircrew. The HUNDREDS (not
"thousands") of US civil aircraft radionavigation ground stations
operate under regulations made in the 1950s. The automatic
morse code identifying tone keying has not been removed from
regulations in a half century.

Robeson should explain how "morse code identification" is
done on DME (Distance Measuring Equipment). Robeson
should explain how "morse code identification" is done on
TACAN (TACtical Area Navigation). Robeson should explain
how "morse code identification" is done on Glideslope.
Robeson should explain how "morse code identification" is
done on 75 MHz Marker Beacons. Robeson should explain
how "morse code identification" is done on ATC Interrogators.

Robeson cannot explain any of that because such morse
code identification is NOT DONE by those US aircraft
radionavigation stations.

>>Thats even better than my compromise proposal. I hope that happens.
>
> Too bad you've been more interested in impressing Unca Lennie than

The bottom line is that Robeson has NO valid statements made
since he does NOT know US aircraft radionavigation systems'
basic technology now or that over the last half century.

>Even from you I am amazed. I bet you would have made a good war protester
>in the 60s. Im sure General Giap would have personally given you the Hanoi
>peace prize.

The Vietnam War was not the ONLY war fought by the USA since
the Korean War. Try refreshing your memory of what happened
since 1973...a mere 30 years. Try Grenada, Panama, Gulf War
1 and now Gulf War 2.

>You have just insulted anyone that has ever worn the uniform of this
>country, whether they actually 'went to war' or not. You own Larry and
>every Marine, Sailor, Soldier, Airman and Coast Guard member an apology.

As a veteran of the United States Army 1952-1960 I don't see
a single "insult" in Kim's remarks.

You owe ME an apology. So does Roll for his "moral superiority"
self-elevation.

>ANY person, male of female, that served at ANY TIME, WAR OR PEACE >deserves
>the RESPECT and GRATITUDE of the nation they served. NO EXCEPTIONS.

Except: Among radio amateurs who love to insult non-amateurs
by stating they were in "rear areas" during a war.

>You being a 'military brat' should know of the day to day sacrifices they
>make. And when one does it for twenty or more years, then they deserve it
>even more.

Are you also one of those "moral superiors" too?

No, you poor baby crying about a past argument you did not win.

My remarks on the pre-restructuring new licensees showed that
the OVERWHELMING majority of new licensees came from the
(then) NO-CODE Technician class. Those were responsible for

a license number growth of over 200,000 in the nine years of the
original NO-CODE Technican class. Without that class of
license the total amateur license numbers would have SHRUNK
noticeably.

You never wanted to admit what the numbers clearly stated.

What you did was borrow Sperioni's kind of statistical grouping
of lumping both (old and new) Technician classes together...and
then tried to make that the ONLY way to group them.

Bad form, OM.

>> Why is it wrong?
>
>Look it up. The answer was explained in detail on April 3 in this thread. It
>was also repeatedly explained to Len when he made the same mistake.

Tsk, tsk, tsk. It is "wrong" only because it does not put morse
code in a favorable position.

Miccolis cannot accept rational arguments against morse code.

It's that simple.

>>
>Well, let's see. In just one paragraph Len demonstrates insults, ridicule,
>name-calling, factual errors, and/or general infantile behavior. No emoticons
>and no ethnic/racial/religious slurs.

Poor baby. Morsepride is still hurt.

You continue to dwell on an old argument on technician groupings where you LOST. You LOST that one because you could not accept negatives about morse code.

Without the NO-CODE Technician class license created in 1990, today's total amateur radio licensees would likely be 200,000 LESS. That was pointed out to you (not just by me) but you would have none of it.

Face it. Morse is fast becoming obsolete. Only amateurs use it because older amateur morsemen insist it be forced down newcomers' throats. No validity other than some nebulous "tradition." Morse testing was always done in amateur radio therefore it must continue to be done. Invalid.

>Guess you're right back in form, Len.

And your little morsepride is still hurt. Poor baby.

>So? Is there a point to your repetition of this? Is it one of your mantras?

I wonder on the "point" of it myself since the morsemen in here are such religious fanatics that they cannot accept any situation where no code testing is done.

You cannot accept such a no-code-test situation so therefore we are at an impasse. But...we aren't there to all the other newsgroup readers. It is to them I point out the futility of maintaining the standards and practices of the 1930s in amateur radio.

>btw, FCC doesn't care about how old a ham is, nor how well they understand the
>material on the written tests, as long the tests are passed honestly and
>licensed amateurs meet the regulations.

Poor baby...trying to misdirect into other threads are you? :-)

MORSE CODE TESTING is directly involved in the "ARS License
Numbers" subject.

You lost the pre-restructuring numbers argument and cannot give
up. Insufferable pride you have, Yoda told me.

>> What is being discussed is the TEST for morsemanship, NOT
>> the use.
>
>Better catch up with the conversation, Len. And do check the subject line.

Tsk, tsk, tsk, I did check the subject line. Since you are NOT the
"conversation monitor" in here, I'm not forced to follow your
misdirections into "age" or "knowledge of questions." Nice try,
but it doesn't work.

The bottom line on ARS License Numbers is that the GROWTH
in total ARS licenses in the USA was due to the NO-CODE
Technician class prior to US amateur radio restructuring.

Without that NO-CODE class license created in 1990, today's
total ARS license numbers would have been much less.

> the obligation to make such inspections.

Phil, what is other states took the same position towards California? California often has fairly unique parasites and pests infesting their food products - the California Fruit Fly springs to mind. What if all other states routinely stopped travelers at their borders and seized food products from California? And not just during the California Fruit Fly scare, but for all time (these inspection stations have been at the California borders for decades). Californians would be absolutely outraged (and the fruit farmers would go ballistic), yet they expect residents of other states to say nothing when California does this very thing to them. Does California have a right to have these inspections? Obviously, they do. But that certainly doesn't change the impression it leaves.

Dan, it wasn't a putdown of the Air Force, just a simple observation - actual combat is not exactly a big concern for the "TYPICAL" Air Force Sergeant. My father was in the Air Force and would agree with that observation (one of the arguments he used while trying to talk me into going into the Air Force instead of the Army - his point was service can be done many ways.

You've got it figured out - take all they can, but keep everyone satisfied just enough not to revolt. It is a game played many times in history, sometimes not so successfully (witness the various revolutions). But, looking at the overall apathy in this country today, they are doing just fine with this game at the moment.

>In one class He asked "Is anyone in the class a Ham Radio operator". In same
>class he said "more people should get one.". From this, I assumed he had a
>Ham
>radio licence.

Do you not know the old saying about what "assuming" does, Vipul?

I know a lot of people who encourage others to stop smoking or learn CPR,
but it does not make them Nurses or Physicians!

>Noone claimed to be a Ham radio op, including those in companies that do work
>in the comm field. (I did not want to raise my hand).

WHOA! But...but...but...VIPUL! YOU stated in this very forum that YOU
support Amateur Radio in non-Amateur Radio forums... ! ! !

Did you lie about supporting Amateur Radio then or are you lying about
this now?

>I am no longer taking his class right now.

I am sure he's losing sleep over why you quit.

> > Since you offer neither a name or callsign, I doubt you are talking about
>>a real person.
>
>Oh, really, You mean its fancy that there could be a Comm Theory Professor?
>How
>unlikely!

There's nothing fancy about it, Vippy. You won't identify this person,
ergo I have to assume (yes...assume), in the face of no other evidence to the
contrary, that this "person" you are using as "support" for your arguments does
not exist.

>>Vippy, you identified types of persons and agencies, NOT "emergency
>>communication situation(s)"
>
>These agencies prepare for emegency situations.

Yes, they do, but thee is a diffrence between an "emergency situation" and
a person who responds to them.

Your lack of command of the language is glaring here.

>>However in the seven you make reference to, three
>>still have SOME use of Morse Code.
>
>The word "SOS" is still used (see below). Any non-Ham knows SOS.

"SOS". is not a word. It is a letter group. "SOS" is not used as a "word" to declare an emergency in voice communications...Either "MAYDAY" or "I am declaring an emergency" are recognized as such. ITU and ICAO refer.

>>Under WHAT situations? You do not set parameters of a "situation", you
>>simply made reference to certain types of persons or entities.
>
>How about survival situations. For example, in army survival manual, no
>mention
>of Morse code, except the word "SOS".

What "army survival manual", Vippy? When did you serve in the Armed Forces of the Untied States? Which branch and in what MOS? Did you attened SERE School? (if I have to tell you what it is, you didn't go...)

>>Oh? Then why is the Armed Forces still TEACHING it? Why are there still
>>ship-to-shore stations still passing traffic in Morse Code, Vippy? Why are
>>there still THOUSANDS of NAVAIDS identifying in Morse Code?
>
>Lots of systems are using old technologies, because they haven't updated
>their
>systems.Air traffic controllers often use outdated technology. Old
>technogies,
>equipment, and systems take time to update.

Morse Code identifiers are used on NAVAIDS because they are simple to implement, and non-English users who might have a problem with accent can simply look at the chart and "decode" the letters from the chart. (A dot/dash chart is provided on every aeronautical chart to "decode" the identifiers)

This is PART of the reason why Morse Code remains a favorite mode among those who enjoy "DXing" and rag-chewing on HF...One does not have to embarrass one's self with frequent requests to "say again" because of misunderstood accents or misapplied slang, etc.

Steve

You misunderstood what she said, Dan. She was differentiating between those who join for self-serving reasons and those who serve for the defense of this country - stating the later were the soldiers she truly appreciated. As such, she owes nobody an apology because I'm sure most military personnel would fully agree with that (except perhaps the ones who joined for the self-serving reasons).

>I grew up in California. I've lived in California many times throughout my
>life. Most of my family, and my wife's family, now lives in California.

Okay, I was NOT born in California. I was born in Illinois, east
of the Mississippi River. I chose California to live in, to work in,
back in 1956.

Nonetheless, many easterners are against California for no
other reason than pique and jealousy.

I didn't say YOU had any "pique or jealousy," did I? :-)

>None
>of that changes my overall impression of these inspection stations.

Okay, whatever. Doesn't have anything to do with "No more FCC
regulation," does it? :-)

Not true. The ARRL spent the better part of 12 years pissing off this
member on the issue. But I did prefer their professionalism in the
matter rather than their eyes rolled back, Code Forever constituincy.

Dave is the only authority that you'll ever need.

Dave says it's higher, but doesn't say how much higher. I suspect
he'll eventually say its 13wpm, but for the present time, all he's
said is that 20wpm is "more proficient" than 13wpm.

One retired FCC communications attorney alluded to the FCC
regulations, which presently specify a 5wpm exam speed.

Bill said 5wpm.

Trouble is brewing in rrap paradise.

As long as SH (in his mind) has 'outsmarted the enemy' then he will have won. In his mind that is.

He probably put them in Syria long before we blew his army to atoms. Thus he expected to be able to retreive them at his will.

This is all an opinion of course.

>
> Do you not know the old saying about what "assuming" does, Vipul?

Tsk, tsk, tsk, Robeson ASSUMES too much.

Not a bad ploy for a redirection on the subject, but transparent.

> I know a lot of people who encourage others to stop smoking or learn
>CPR, but it does not make them Nurses or Physicians!

This isn't a newsgroup for agriculture, lifestyles, or the medical profession. Try to stay focussed.

>>Noone claimed to be a Ham radio op, including those in companies that do work
>>in the comm field. (I did not want to raise my hand).
>
> WHOA! But...but...but...VIPUL! YOU stated in this very forum that YOU
>support Amateur Radio in non-Amateur Radio forums... ! ! !
>
> Did you lie about supporting Amateur Radio then or are you lying about
>this now?

Robeson has one irritating presumption (a false one), that of anyone contradicting his viewpoints is "lying." :-)

That's tiring but it is standard newsgroup practice for Robeson.

>>I am no longer taking his class right now.
>
> I am sure he's losing sleep over why you quit.

Robeson assumes something. Does he not know the old saying about the word "assume?" :-)

>> > Since you offer neither a name or callsign, I doubt you are talking about
>>>a real person.

>>
>>Oh, really, You mean its fancy that there could be a Comm Theory Professor?
>>How unlikely!

>ergo I have to assume (yes...assume), in the face of no other evidence to the
>contrary, that this "person" you are using as "support" for your arguments
>does not exist.

Robeson has NOT identified his "seven hostile actions."

Ergo, Robeson's "hostile action" claim is false.

>>>Vippy, you identified types of persons and agencies, NOT "emergency
>>>communication situation(s)"
>>
>>These agencies prepare for emegency situations.
>
> Yes, they do, but thee is a diffrence between an "emergency situation"
>and a person who responds to them.

"Thee?" :-)

This is not a Public Safety Radio newsgroup.

> Your lack of command of the language is glaring here.

Tsk, tsk, tsk...Robeson does NOT want to go there. :-)

He lost his "command" some while ago, cannot regain it
during times of rage in here.

>>>However in the seven you make reference to, three
>>>still have SOME use of Morse Code.
>>
>>The word "SOS" is still used (see below). Any non-Ham knows SOS.
>
> "SOS". is not a word. It is a letter group.

That depends, oh mighty veteran of "seven hostile actions."

Those with previous military experience will recognize it as an
acronym standing for a particular breakfast meal. :-)

>"SOS" is not used as a
>"word" to declare an emergency in voice communications...Either "MAYDAY" or
>"I am declaring an emergency" are recognized as such. ITU and ICAO refer.

"ITU and ICAO refer"? What does that mean, oh commander
of the English language?

Just what does the International Civil Aviation Organization (ICAO)
have to do with this? Is Robeson now doing some kind of ER
drops by HALO procedure? :-)

>
>>>Under WHAT situations? You do not set parameters of a "situation", you
>>>simply made reference to certain types of persons or entities.
>>
>>How about survival situations. For example, in army survival manual, no
>>mention of Morse code, except the word "SOS".
>
> What "army survival manual", Vippy?

Robeson has had ample opportunity to view, review, download US
Army Field Manuals and other public documents from the
General Dennis J. Reimer website of the Army Training and
Doctrine Digital Library. I've given the web addresses several
times in here. Robeson refuses to acknowledge any manuals
from the US Army.

>When did you serve in the Armed Forces of the Untied States?

I served from 1952 to 1960. Is that some kind of "prerequisite"
for talking about anything in here?

>Which branch and in what MOS?

Mine was Signal Corps with MOSs 1419 and 281.6 (MOS
numbering system revised while on active duty), microwave
radio relay operations and maintenance. Robeson has had
that described to him more than once but refuses to
acknowledge the correct MOS (Military Occupation Specialty)
and duties performed. Robeson has an irritating habit of
personally insulting any veteran that does not agree with him.

>Did you attened SERE School? (if I have to tell you what it is, you didn't
go...)

What is this "SERE School?" Explain.

Was it necessary for those undocumented "seven hostile actions?"
Explain.

>>Lots of systems are using old technologies, because they haven't updated
>>their
>>systems.Air traffic controllers often use outdated technology. Old
>>technogies,
>>equipment, and systems take time to update.
>
> Morse Code identifiers are used on NAVAIDS because they are simple to
>implement, and non-English users who might have a problem with accent can
>simply look at the chart and "decode" the letters from the chart. (A
>dot/dash
>chart is provided on every aeronautical chart to "decode" the identifiers)

Robeson seems to be a technical dunce in regards to civil aviation.

The agreed ATC (Air Traffic Control) language worldwide is English.

It has been so since 1955 under standards of the ICAO.

English language skills are REQUIRED in worldwide civil aviation
for ALL Air Traffic Control.

That's the way it is.

> This is PART of the reason why Morse Code remains a favorite mode among
>those who enjoy "DXing" and rag-chewing on HF...One does not have to
>embarrass
>one's self with frequent requests to "say again" because of misunderstood
>accents or misapplied slang, etc.

The slow speed of morse code on-off keying allows any user to hide
their ignorance of even the most basic communications knowledge.

On-off morse code communications disguises bad voices and bad
manners.

On-off morse code communications allows users to pretend they
are experts in radio, giving them time to pretend they have done
heroic deeds such as rescuing ships at sea or being heroes in
seven hostile actions.

I would not say there's overall apathy. I'd say it's a high rate of
satisfaction. Doesn't mean the USA is a utopia, just that most people feel they
are getting their needs met enough that revolution is a far thing from most
folks' minds.

And when people DO feel upset enough about something, they let their voices be
heard, even if the govt. doesn't do much about it. Look at how many people
turned out in anti-war demonstrations in the past few weeks/months. And how
many showed up to support our troops (regardless of their position on the war).
Whether you agree with them or not, you can't call those people apathetic. And
for every person who was demonstrating, there's probably somebody (or several

somebodys) who agrees with their position but had to be at home with the kids, had to work, etc.

I think what Kim's saying is that she's satsified enough not to make big waves.

A big reason the USA has not suffered more terrorism in the past has been the fact that the USA's freedom and satisfaction levels are historically so high that most wild-eyed radicals calm down after a while here and become at least semi-productive citizens. One of the shocking things about the Sept 11 hijackers was that they were able to live here in comfort for years and yet still desire to commit their crimes.

Consider the following:

During WW2, a number of German U-Boat crews were captured and sent to POW camps in the USA. Many of these POWs did not want to go back to Germany after the war, and more than a few stayed.

A number of these POWs managed to escape, and some were never recaptured. In a high percentage of cases, the escapees never went back to Germany - they assumed new identities and blended in. For decades after the war ended, every so often one of them would turn up at a government office and reveal his true identity. I think the last one turned himself in a few years ago.

These were not war criminals, just regular sailors who saw that life in the USA was so much better that they wanted to stay.

You seem to want to FIGHT. Tsk, tsk, tsk.

The Vietnam War ended on January 27, 1973.

That's over 30 years ago.

The "Chirac position on Iraq" is about the second Gulf War
going on right now.

That isn't even close to being a subject about amateur radio
policy, is it?

Do you wish to go to war in order to preserve the right to
tyranize newcomers by forcing them to test for morse
code? Seems like an odd thing to do. Doesn't "enhance
good will" at all, not even "uniquely" as described in 97.1 (e).

I see that you're just as misinformed about this as about radio! :-)

The inspection station on I-15 coming from Las Vegas is in Yermo, right next to Barstow, about 100 miles in, and about 10 miles east of where I-10 and I-40 merge. Mile marker 86 is what I remember as the warning point when approaching it. The station along I-80 is 25 miles in from the Nevada border, west of Truckee, CA. I-5 has it about 50 miles south of the Oregon border. Along US-395, the station at Alturas, CA is about 25 miles in.

"As much as" usually means the extreme, and in this case, the extreme is the station at Yermo, which is roughly 100 miles in, just as I said. Also, clearly not all the stations are within a few miles of the state border.

You need to get out a map. I-10 and I-40 don't merge. I-40 merges with I-15 in Barstow and I-15 then goes on to merge with I-10 near Riverside and San Bernardino. Regardless, I don't know anything about the inspection station you're talking about - the inspection stations on I-10 and I-40 at the state line between Arizona and California are very near that state line. I can't say exactly how many miles because I've never paid that much attention, but easily within ten to fifteen miles (if that). Anyway, how does the distance from the state line change anything I've said about the impression these inspection stations present to those traveling into the state of California?

For fruits? Man, doesn't the CHP have better things to do? I wonder what would happen if someone ran one of these agricultural inspection stations? Would the CHP give pursuit? Would they be authorized to use deadly force to stop the vehicle? Can a person be placed in jail for having the wrong Orange or Apple in the vehicle?

> I'd call it protection of the state. :-)

I call it protection of the wealthy fruit farmers.

I don't know the answer to that myself. I have not been able to find much independent information about Israel and the few Israeli I've tried to talk to seem evasive and even defensive. I've heard some jobs are now limited to just Jews - police, military, and so on. But I don't know that to be a fact - it could be just anti-Israeli propaganda.

> - What was Palestine like before 1948 in terms of

Are you seeing through my thinly veiled attempts to slowly get out of this discussion, Jim? Anyway, to answer your question, I've always tended to prefer the wholesome girl-next-door type (even if it is just a character), so I guess my preferences would be MaryAnn and Bailey. I don't routinely watch fix-it shows, but, just on appearances, I guess the nod would go to Robin Hartl. [like I would fight any of them off]

>> War in Iraq
>
>Well said, Larry! You cut right to the heart of the matter. All the
>pacifists seen oblovious to history and to them "It's all about me and
what *I* think".

Dick:

I have no problem with "pacifists." In fact, I consider myself to be one!
However, a preference for peaceful coexistence is not inconsistent with
a willingness to use force in order to counteract the oppression of a
totalitarian regime. Those who argue against this war, with their off-
the-shelf rantings about this being a "war for oil" and "a war for the
President's Daddy" and whatever else they're saying, are more truthfully
expressing their own cowardice than any rational political philosophy.
If one personally objects to the concept of killing, then they are entitled
to their beliefs, and should not be required to serve in the armed
forces, unless they voluntarily consent to do so in a purely support role.
Unfortunately, the present-day anti-war protesters don't make any
sense if they see themselves as being motivated by a desire for "peace."

The country of Iraq has been suffering under the barbarous regime
of Saddam Hussein for two decades. This madman has consolidated

his power through the institutional use of cold-blooded murder, rape, torture and extortion. He has categorically refused to cooperate with United Nations weapons inspections in spite of his having signed a treaty requiring him to do so. Twelve years of negotiating, debating, threatening, and imposing economic sanctions has yielded nothing in the way of an assurance that he will not produce and deploy weapons of mass destruction. However, the anti-war protesters insist that we are still not justified in using our nation's military power to overthrow this evil, corrupt, and bloodthirsty regime. They are so obviously wrong and apparently uninformed that they simply cannot be given any consideration whatsoever. Fortunately, we now have a President who will not cave in to their emotional pleas to allow innocent people to be tortured and killed in order to avoid warfare.

The anti-war protesters are an aspect of a free and pluralistic society that we must put up with. We do not, however, have to grant them any credibility.

> That is absolute bull crap, Larry. First of all, a willingness to kill
>has never been, and should never be, the judge of someone's loyalty to this
>country.

Dwight:

In America, those who are unwilling to kill are not required to do so.
Even before we had an all-volunteer concept in the armed forces, those
who conscientiously objected killing were, if conscripted, allowed to
perform support duties which did not require them to to bear arms for
any reason other than self defense. Their service was of value to our
national security, and their loyalty is not questioned.

>Second, unless we now live in a military state, military service
>does not make one "superior" to other Americans.

I don't recall claiming that it did. It does, however, bestow honor and
prestige upon those who *have* faithfully served.

>And finally, most who
>served in the military, including myself, will always strongly prefer a
>peaceful resolution over the failure of war.

Amen. May it always be so. However, when diplomacy fails, we must
be prepared to use force to eliminate evil. This is a moral obligation of
a nation which is based on the concept of freedom and liberty.

>and certainly came as close to war as you ever did (actual combat is not
>exactly a big concern for the typical Air Force Sergeant), so don't sit
>there on your pompous butt talking about being "superior" or more loyal.

My own service to my country involved sacrificing the best and most
productive years of my adult life, working long hours under at times
difficult conditions, ensuring that personnel and materiel were transported
safely and efficiently, that people were well trained in their jobs, and
government resources were safeguarded and effectively utilized. I did
faced the dangers of possible armed conflict by virtue of having served in
a position requiring worldwide deployability, and indeed, I served overseas
for a number of years on permanent and temporary duty assignments.
No, I was not concerned about sitting in a foxhole with bullets whizzing
past my head. But those who were actually concerned with that sort
of thing depended on me and the people I worked with to give them the
support they needed to suceed. On the other hand, I had to depend on
many others for the support I needed to do my job. The thing that is
unique about military service is that there are no unimportant jobs when
it comes to achieving the overall objective -- which is the deterrence of
war and/or the successful use of military power to achieve peace in
the absence or failure of diplomacy.

> The millions of fellow countrymen you described above didn't sacrifice so
>you could describe yourself as superior and other Americans as inferior or
>yourself as more loyal with others less so. In reality, to proclaim yourself
>more loyal or superior to other Americans is nothing more than a cruel slap
>in the face of what they actually sacrificed for.

Well, Dwight, I see your point, but in this case, it was actually a very
highly directed slap in Kim's face! In fact, it was actually intended to be
a jaw-smashing, tooth-ejecting, blood-splattering knockout blow! However,
I'm sure that in Kim's case, as usual, it went whizzing safely right over
her haid!

Kim:

I don't know who this "Larry" you're talking about is, but I sure hope
that there really aren't any soldiers who go to war JUST to legally shoot,
maim, and kill people! That doesn't sound very much like "moral
superiority" to me!

A soldier is like a policeman. He or she is trained in the use of
deadly force in order to resolve conflict. He or she then spends the
rest of their career praying that they never have to actually utilize
deadly force for that purpose. When they must put their training into
actual practical use, they utilize the force at their disposal with
the greatest possible efficiency in order to resolve the conflict at hand
quickly and at minimum cost in lives and property. Any soldier who
is doing his job just to have, as you put it, a legal right to kill, is not
the kind of person we want doing that job. There is a difference
between being a warrior and being a criminal; you don't seem to have
a very good grasp of that concept.

Jim:

I'm sure that Dan understands that proven traitors are not included in the most admirable comments he made above. The relatively few and notorious members of the armed forces who have sold our country's critical military secrets to our potential adversaries have counteracted whatever of their own valid contributions they made have made, and those of all of their fellow service members. They make the world a more dangerous place for everyone, and the damage they do must be repaired at a much greater cost in material resources and increased jeapordy of our loyal, trustworthy armed forces personnel. Dan knows this, I'm sure.

>Dwight Stewart (W5NET)

Dan/Dwight:

Joining the armed forces for "self serving" reasons isn't necessarily a
bad thing. I joined the Air Force because I always had an interest in
aviation and transportation, and saw it as a way to gain professional
training in that field. Only after I was in did I come to realize that I was
making an important contribution to our country's national security
during the most critical years of the "Cold War" against Russian
Communism. As an Air Force supervisor, one of my biggest
challenges was making my younger personnel understand that what
they were doing *was* critically important, and worthy of their best
effort at all times.

I'm sure that Private Jessica Lynch joined the Army with the primary
interest of using it as a stepping stone toward her goal of becoming
a teacher. Once in, I'm sure that she, like most other young people
in the military today, became aware of the importance of her role and
it's contribution to our national security. She probably never imagined
becoming a legitimate war hero, as she now certainly is. However,
even if she had not been deployed to Iraq, her contribution would have
meant that she was required to sacrifice some of the best years of
her life in order to support the efforts of those who did -- and whatever

"self serving" benefits she, and the soldiers, sailors, airmen, and Marines who supported her -- derive from their service in the armed forces is the very least we can offer them in compensation.

> months. And how many showed up to support our
> troops (regardless of their position on the
> war). (snip)

I'm not sure this is represents a lowered apathy level. Are we seeing increased involvement or just the same people getting more vocal about their positions? Regardless, it is pleasant to see so many speaking out, whatever their positions might be.

> During WW2, a number of German U-Boat crews
> were captured and sent to POW camps in the

> back to Germany after the war, and more than
> a few stayed.

As I understand it, thousands of POWs were sent here on returning troop ships - the actual number is unknown because the military has never released that data. However, I'm fairly certain many did choose to stay here after the war. But that is not really uncommon. Our own military has a problem with soldiers and civilian employees deciding to remain overseas - so much so that civilian employees are now limited on the amount of time they can work overseas for the military at any one time (active duty soldiers are

transferred regularly and the military has little control over soldiers leaving the service). It is estimated that as many as a million ex-GI's are now living in Germany alone, with perhaps another couple of million living in the UK, Spain, Italy, Japan, Korea, and so on.

Sure. Here's another angle:

SH isn't the kind of guy who takes bad news lightly. Typical kill-the-messenger type. Long ago, those around him learned NEVER to give him bad news - instead, let somebody expendable do it. As a result, SH became more and more insulated from reality. So a lot of what is being broadcast from the regime may actually be intended to keep SH in the dark, rather than to fool anyone else.

Hopefully the fighting will be over very soon.

--

It's amazing how dictators manage to snatch failure from the jaws of success. Look at ol' Fidel, for instance. Takes over Cuba, the biggest island in the Caribbean, right at the beginning of the era of jet air travel. He could have made Cuba THE vacation destination of the whole area, offering more resort attractions than anywhere else (because Cuba is so big) and undercutting the competition on price (because Cuba could produce lots of things locally, instead of having to import almost everything, the way places like Bermuda have to do). Sitting on a gold mine but ideology cuts the place off from developing it.

SH has been sitting on the second largest known oil reserves in the world. Enough to make the whole country filthy rich and the envy of the world. Instead, the place is wracked by war, poverty, and misery, all due to a dumb, bad guy at the top who wants to be the next Joe Stalin.

Ya gotta wonder.

"Growth industry"? Amateur Radio is "not for pecuniary interest", so it can't be an industry. Manufacturing and selling Amateur Radio hardware and software can be an industry, though.

And if we look at the number of manufacturers making and selling Morse Code related hardware and software today, as compared to 10, 20, 30 years ago, it's clear that part of the industry is growing. With or without a test.

I agree. Saddam is not that stupid. Syria would keep such weapons for themselves, leaving Iraq with no hope of ever getting them back after the hostilities are over and leaving Iraq with a neighbor armed with those weapons.

FWIW, Arizona recently re-opened their agricultural inspection
stations with the objective of preventing the spread of a virus
that infects birds. They are now stopping all vehicles and asking
the drivers if they are carrying any live birds.

In the past, Arizona maintained a full set of inspection stations
on its borders with California, Nevada, Utah and New Mexico, but
has de-emphasized the program in recent years due to, one supposes,
better interstate coordination on agricultural pest problems. Or,
perhaps because Arizona's biggest cash crop has switched from citrus
to retirement housing.

I hope you're right, but who knows? SH was stupid enough to invade Kuwait in
1990 and think he could get away with it. He was stupid enough to think he
could play games with the UNSCOM folks and get away with it indefinitely.

Most of all, he's so stupid that even with total control of a country with the
world's second-largest oil reserves, his people live in poverty, misery and
fear, when they could live in luxury and comfort, all provided by oil money.

From N2EY:
>And if we look at the number of manufacturers making and selling Morse Code
>related hardware and software today, as compared to 10, 20, 30 years ago,
>it's
>clear that part of the industry is growing. With or without a test.

Glad to see an EE advocating Morse code instead of Electrical Engineering. From the numbers, we know thats not a growth industry.

1899. Lennie Just Can't Stand Being Ignored!

Rest of Lennie's post snipped due to lack of relevence and usual insulting and empty rhetoric.

Sorry Lennie...I put you in the Scumbag File for a reason. It's becasue you're a scumbag (The simplicity of THAT was overwhelming!)

Steve

No kidding...I caught an "interview" with the Iraqi Information Minister this morning bragging about how they had repulsed American forces from the airport.

All the while they were doing a split-screen showing some of our guys on the ground at the airport with weapons either at sling arms or in a ready but not defensive posture.

This guy must have gone to the Lennie the Lame School of Tell The Lies Despite The Evidence To The Contrary.

What idiots.

Dan, what proof do you have of this? "We" the people were told that they were in Iraq. Now, we were told this by our President who, presumably, has the entire resources of our spying capabilities available to him. While "we're" not done in Iraq yet, have *YOU* noticed that there's been nothing in the way of WMD or biological or chemical weapons found?

Now, you are saying "they're in Syria." What resources are available to you? Or, is it just that you are among those who'd see to it that we progress through one country after another using our red herring, until we're tired of obliteration?

Good grief.

> every Marine, Sailor, Soldier, Airman and Coast Guard member an apology.
>

No, I've just insulted anyone who's ever worn the uniform of this country in the name of defending Democracy, who then turns around and displays behavior of a non-democratic nature. Telling a war protester to "go to Russia...Africa...Iraq" is not having the tolerance that it takes to accept and be a member of a democracy. If there are people who state they ":went to war" (i.e., wore a military uniform) for the benefit of democracy, then tell me that I'm wrong to think a certain way--then they don't even understand what they "went to war" for.

>
> ANY person, male of female, that served at ANY TIME, WAR OR PEACE
deserves
> the RESPECT and GRATITUDE of the nation they served. NO EXCEPTIONS.
>

I disagree. If that person comes back with some kind of superior attitude and feels they have a right to dictate how someone should think, they won't get my respect. Mind you, I haven't told them to go to Russia...Africa...Iraq. And, I haven't told you anything about how you are wrong for thinking the way you do. I won't. But, you also won't get my respect or agreement with what you say. The wars my heroes fought defended your right to believe however you wish. But, they were also fought to defend however I believe to think. And, I take it even further to believe that you deserve dignity, even though I may disagree with the way you think. It seems to me you are stopping way short of allowing anyone who thinks differently than you, any dignity at all.

First, note that the fat lady hasn't sung yet. Although, I am pretty sure
the WMD won't materialize.

What's the *real* reason? Goodness, if I could get into the head(s) of the
President et al, maybe I could tell you. Maybe it's as simple as
vindication for a father who failed...I don't know. This will all come out
in the wash. But, with NATO such as it is now, the UN such as it is now,
world opinion such as it is now, it will be very interesting to see what the
future holds, and what legacy this President will leave behind. We, the
United States and Britain (for the most part), have a lot of 'splaining to
do--is what the rest of the world is thinking I'm sure. We'll (the world)
see what happens.

Yep. they got us where they want us. And, we're too fat, happy, and stupid
to care or do anything but be fat, happy, and stupid. Note: the WTC, the
fall of financial giants/empires, the erosion of the
economy/workforce...etc. K? Got that picture? K. Everyone starts waking
up, getting dissatisfied, getting concerned, getting involved....etc. K?

Got that picture? K. War. Whoop. For whatever reason, for however it happened, now we're all back on board again. We are more worried about "that" (there's always a that) than we are about "this" (and there's always a this--some this's are just more bigger :) than other this's).

Since approximately 1/3 of the hams spend 75% or of their time (per a recent
ARRL survey), your last question is incorrect. Hams are certainly somebody.

Why do people misinterpret what I say? I agreed Morse code is a growth
industry, EE is not.

Pointing out the increased numbers is advocating Morse code. N2EY (an
Electrical Engineer) advocates Morse code, not Electrical Engineering.

And now Vipul manages to interpret the response as to mean exactly the opposite of what the poster actually said. Where do you get your data ??

Morse code usage does indeed appear to be on the increase. There is not only the growth in the sales of the equipment to back it up but actual usage data. The ARRL has recently published an article about contest participation. The participation in the CW contests has increased 20% in the last few years. There has been almost no increase in the participation in phone contests.

There's a very simple way to show it's growing. Check out the articles on the ARRL web site. The growth in participation in the phone contests has been insignificant yet the growth in participation in the CW contests has been a whopping 20% in the last few years. That's a lot of growth. Any business would take that kind of increase and celebrate.

Note that I did say "while we're not done in Iraq yet." My question to Dan
was to point out to him that it's not as definite as he seems to think it is
that Iraq has WMD. Yes, I agree with you. It is a bit (a lot) early to
draw conclusions. I also think it was a bit (a lot) much to ask the world
to get on board with this when it hasn't been proven. I also realize there
are those like Dan who believe--for some reason--that this is definite. It
bothers me when I am expected to "just accept" something...with no basis.

My skepticism is not based on a mistrust of the US government, nor really of
a non-violent attitude. I am very concerned about world repurcussions with
this action. I am even more concerned if there are no WMD found/discovered.

I glanced at so, admittedly, haven't researched the article nor gone any
further. The reason is because an article in a newspaper, or an opinion
from someone whomever they may be, is certainly great for debate. But as a

basis for decision making in matters of foreign policy and/or war? I know you know that, by the way...

Jury's still out. Consider that if the Iraqis hid their WMD well, it may
take a while to find them, particularly if while looking for them you
have to pause every so often to respond to a pickup full of fedayeen with
RPGs. So it's a bit early to draw conclusions.

Now, wait a second, Jim. Those atrocities never happened, and I have irrefutable proof. Recently there have been hundreds of thousands of people in the streets of cities in America, Europe, Asia and particularly the Middle East, protesting the deaths of Iraqi civilians in the present war. Obviously, people who care so deeply about the average Iraqi would have been protesting the Hussein regime's treatment of its citizens had atrocities such as you mention actually been happening for the last 20 years. But there have been no such protests against SH's regime. QED: There have been no atrocities.

(P.S.: Anyone who doesn't get the sardonic nature of the above shouldn't bother replying.)

From K4YZ:
> Is the class organized to teach Amateur Radio? If not, then why would he
>mention it other than in a historical case reference?

Smith chart was very important, yet another prof did not cover it. (Probably because not enough time).

Classes don't always cover the material you need, so its possible Morse could not have been mentioned for other reasons than <lack of> merit.

>>-What are the advantages/disadvantages of Morse code?
>
> Without any practical experience, how could he make an informed opinion
>on
>this?

Proff really knows his stuff from a practical standpoint. He also claims this is the best way to learn. He mentions Ham radio, so he must have been a Ham. He was not a non-industry Prof. He worked in industry for several years, has designed many Comm Systems, and has written several papers. He is now a Prof.

The class covered tradeoffs of each mode. Very complicated codes such as Walsh codes and Turbo codes would be covered next class. Prof really knows the material on encoding schemes.

Its amazing that you would say that someone that teaches a class has no knowledge of the subject matter or practical experience.

Seems like you want me to ask the following irrelevant additional questions:
-Do you, or did you, have an amateur radio license.
-Do YOU know Morse code.

>And you did not answer the question about whether or not YOU served in the
>Armed Forces of the United States.

No, I did not. Just referring to US Army Survival Manual, in bookstore. FM 21-76, if that means anything.

In the 22th century, how many Morse coders will you need to replace a light
source?
Five. One to actually do it, and four to reminisce about how much better the
old tubes were.

How do Morse coders traditionally greet each other?
"Hi. I'm better than you."

Why can't a gorilla do Morse code?
He's too sensitive.

Why did the Morse coder learn code?
So he wouldn't be mistaken for for a CBer.

It was not clear from your post. I thought that was whay you meant, but as you see, others thought you meant something else.

Maybe some classes in expressing yourself, and possibly a Dale Carnegie course would help (not trying to be rude here - I recommend the second course all the time to most everyone)

How do you draw that conclusion? Another of my hobbies is amateur astronomy. By your logic, I am advocating people to stay out of my professional field? Does not make sense. Jim is doing what he likes to do on his personal time. And if that includes "beeping", then that's just fine and dandy.

Why your obsession with what Jim does in his spare time?

Who is doing that? Can't be me. In case you didn't notice, I advocate all sorts of amateur radio activites, not just Morse code. Like homebrewing.

>From
>the numbers, we know thats not a growth industry.
>
What is not a "growth industry"?

--

Here's two simple questions for you, Len, N0IMD, and anybody else who wants to answer it:

Currently there are more than 250,000 US amateur radio licensees shown in the database as "Technician". Have any of them passed code tests? Do any of them have HF amateur privileges?

> What of the many that -
>
> 1. Tried it and found it of NO enjoyment?

My nightly 10m ragchewing partner is an 82 yr. old General who understood
what was required for HF privies, satisfied that requirement w/o the crying
and moaning and never looked back. CW was/is not his preferred mode. His
enjoyment came from "earning the privilege" to utilize his preferred mode
and frequencies.

> 2. Have been in radio communications for years and never used it?

Lots of folk passed their respective code tests to ear their HF privies and
then never used code again. There's certainly nothing wrong with that.

> 3. Noted that no other radio service uses it any more or never
> planned to use it in that service at all?

Apples and oranges, Len?

> 4. Don't buy into the fantasy mystique of the Way of Morse?

I didn't buy into anything and nobody sold it to me either. I wanted to become an ARO and operate on HF. I researched the requirements. I studied to satisfy said requirements. All in all, MUCH less arduous than whining about the unfairness of it all. In studying for and passing Element 1, I found that I kinda liked the code. I learned at approx. 15-wpm w/a character spacing of 5-wpm. Now, I'm up to 25-wpm w/a character spacing of 6-wpm. Does that mean I'm "proficient?" Heck no! Element 1 was just an entry level exam designed to give one a "taste." The resulting ticket is just a license to learn. (But it has always been the individual's choice as to how far and in what dir'n they wish to progress.)

> 5. Don't believe that time stands still with no progress in any
> technology such as some olde-tyme amateurs?

So retaining Element 1 retards the growth of other technologies in AR? LMAO!

> >> What is the International Amateur Radio Union's viewpoint on the

> communications or electronics.

Guess their not up to your standards, Len.

> Nearly ALL countries are involved in expansion of commercial
> radio-electronics with little regard for hobby-leisure pursuits
> involving amateur radio and the furtherance of the morse code
> state of the art.

The PARTICIPANTS of hobby radio take care of that. Get it, Len? That's why the NCTA's cry (Very appropriate word.) of "well, the FCC says so" is childish. That's also why the NCTA's are scared to death of a honest vote by the some odd 685,000 licensed US ARO's re. the retention of Element 1.

> >Sadly, many amateur radio
> >"organizations" do not echo the sentiments of the majority of their

I violently agree! :-)

> >A fair vote scares the crap out of the NCTAs.
>
> It does NOT.

Sure it does. The mere suggestion of a fair vote brings out the "well, daddy (The FCC) says so" :-p responses, when it's clear that "daddy" couldn't care less. Prettty lame, Len.

> Morse code mode is on the way of becoming

From (WA8ULX):
> Hey VSHAH are you still one of them No-COde CBplussers?

Yes.

-In the 22th century, how many Morse coders will you need to replace a light source?
Five. One to actually do it, and four to reminisce about how much better the old tubes were.

-How do Morse coders traditionally greet each other?
"Hi. I'm better than you."

-Why can't a gorilla do Morse code?
He's too sensitive.

-Why did the Morse coder learn code?
So he wouldn't be mistaken for for a CBer.

>> was not a non-industry Prof. He worked in industry for several years, has
>> designed many Comm Systems, and has written several papers. He is now a
>Prof.

K4YZ accuse me of creating non-real Prof. More and more facts revealed. Now Prof also worked in industry and designed Communication Systems.

Either this is an <out of control> growing fancy- or it must be true.

Also, I don't know Prof's ans. to Morse Question? I sincerely doubt that it has the qualities that make it most important mode.

Morse code could be:
(1) most fun mode, since manual realtime encoding/decoding is fun.
(2) least complex modulation mode (as listed on chart of modulation schemes).

I doubt Morse code has:
(1) highest information rate - other modes seem to beat it.
(2) lowest Bit Error Rate

(3) practical use for emergency comm - otherwise it would be in use.

Prof.

That is a fallacious deduction. Just because he mentions ham radio does NOT imply that he is a ham. People in the various radio communications fields have at least heard of us and have a rough idea of what we do. Designing industrial comm systems does not mean that he is intimately familiar with the activities of the ham community.

Whether they are using it for fun or other reasons, they are still using it in significant numbers. Therefore your statement that nobody uses it is wrong.

I go to lots of hamfests. They aren't weird, overweight or antisocial. I know a lot of skinny hams. Afterall, someone needs to be available to climb the towers for antenna work. Our local ham club has 5 officers. Only 2 of us could be considered overweight. When I look at the general membership in attendance at a meeting, there is no higher percentage of overweight hams than there are in the general population.

>Dee D. Flint, N8UZE
>Just because he mentions ham radio does NOT
>imply that he is a ham. People in the various radio communications fields
>have at least heard of us

Interestingly, in two other rf class, both Profs made no mention of amateur radio. Probably, has never heard of it.

In one class a list of books was given. All were scholarly books. Other than that IEEE paper articles were referenced.

Not even one reference to an ARRL publication or article or about amateur radio.

Actually, in my opinion, that would have made the class even better. I mean this from an academic viewpoint, not from a biased Ham viewpoint. The examples in the ARRL books were well explained, unlike the textbook examples. ARRL books often had more practical consideration, rather than showing an ideal circuit that the textbook shows. And the books did not sacrifice on the rigorous math.

Since a list of books was mentioned, at least one ARRL pub. would have made the class better. The class did not have a lab, and some of the projects, in one book, would make good lab projects.

In one antenna class proj, I used an ARRL pub. and this help me get the project done faster and better. I got the ARRL pub from someone in a local Ham club. I mentioned I had a class assignment, and asked if anyone built a similar antenna or knew anything about it.

> state of California?

That was a typo. I-15 (not I-10) and I-40 merge.

It changes the view that California isn't there to protect its BORDERS against agricultural infestations - especially if it takes more than an hour from the border to come across the inspection station. 100 miles in gives no such impression, and there are other ways in (not so major highways) where one may not reach any inspection station at all.

The question should be: What does that say for those who live in Baker and places on the "outbound" side of the stations yet are within California borders?

Last I heard, the Marines were digging in the yard of a girls' school, on a tip
from an informant that a cache of chemical weapons had been buried there.

>Although, I am pretty sure
>the WMD won't materialize.

>
Actually, they don't have to. Documents or traces of them will prove the point. But it would be best for everyone if the WERE found - and destroyed.

>What's the *real* reason? Goodness, if I could get into the head(s) of the
>President et al, maybe I could tell you.

Here are some possibilities:

- Bush & Blair have information they can't reveal that proves the war is worth the risk.

- They are being fed false information by folks who want SH gone.

- It's about the oil

- Distraction from economic and terrorism issues at home

>Maybe it's as simple as
>vindication for a father who failed...I don't know.

Did Papa Bush really "fail"? As I understand it, during GW1, coalition forces were rolling towards B'dad at a furious pace but were ORDERED to stop because Kuwait had been freed, which was the avowed goal of GW1. Why wasn't Stormin' Norman allowed to finish the job? I've never seen an official answer to that question.

>This will all come out
>in the wash.

If we live long enough.

>But, with NATO such as it is now, the UN such as it is now,
>world opinion such as it is now, it will be very interesting to see what the
>future holds, and what legacy this President will leave behind.

Recall that after GW1, Papa Bush had extremely high approval ratings - so high that none of the top Dems wanted to run against him. Bill Clinton was initially a sacrificial-lamb candidate like Christie Whitman when she first ran for NJ governor.

But the economy went bust in 92, and then Ross Parrot (I mean Perot) divided the conservative vote. So we got 8 years of Slick Willy, who, despite a booming economy and the perception of peace and security, got himself impeached and couldn't help his VP get elected.

>We, the
>United States and Britain (for the most part), have a lot of 'splaining to
>do--is what the rest of the world is thinking I'm sure.

Probably. OTOH, many of those other govts. may be very happy to have us do their dirty work for them. Ya think Putin has billions to spend getting rid of a regime that used to be a good customer, and is possibly a competitor in the world oil market? I don't.

> We'll (the world) see what happens.

Hopefully we'll get the straight story. Someday.

--

Ever see the beginning of the movie "Gladiator", where the over-matched barbarians are simply wiped out by the Roman legions?

One line that comes to mind is "some people should know when they're beaten" or something like that. After the battle, it turns out that the main reason for the campaign was because Rome felt threatened, and just that feeling would cause Rome to squash the perceived threat.

Are we entering an era of Pax Americana?

Same thing can be said at U.S. Customs stations, either at the borders or at other ports of entry (airports and shipyards).

> source?
> Five. One to actually do it, and four to reminisce about how much better the
> old tubes were.

How many no-coders does it take to screw in a light bulb:

One to whine about how unfair it is that he has to know how to unscrew
the bulb.

One more to whine about how with florescent bulbs and those cool
lights used on Indiglo watches, that its unfair because light bulbs were
invented by Thomas Edison soooooo long ago, and light bulbs are obsolete

One more to whine about how people who know how to unscrew light bulbs
are so mean.

And one more to reconcile the others about how all they have to do is
wait, and all the light bulbs will go away soon.

So in the end, they all sit around in the dark, waiting, whining,
wringing their hands, and feeling sorry for themselves.

> How do Morse coders traditionally greet each other?
> "Hi. I'm better than you."

How do no-coders greet each other?

They don't. No one is going to force them to learn a language. Its unfair

> Why can't a gorilla do Morse code?
> He's too sensitive.

yawn

> Why did the Morse coder learn code?
> So he wouldn't be mistaken for for a CBer.

He learned so he could get the HF privileges.

The question was "Is the class organized to teach Amateur Radio?"

What did that have to do with Smith Charts?

>Classes don't always cover the material you need, so its possible Morse could
>not have been mentioned for other reasons than <lack of> merit.

The question was "Is the class organized to teach Amateur Radio?"

You didn't answer the question. Why?

>Proff really knows his stuff...(SNIP)

Except his name, obviously.

>The class covered tradeoffs of each mode. Very complicated codes such as
>Walsh
>codes and Turbo codes would be covered next class. Prof really knows the
>material on encoding schemes.

Well, get him to encode his name in Morse Code, OK?

>Its amazing that you would say that someone that teaches a class has no
>knowledge of the subject matter or practical experience.

First of all, you refuse to identify this fountain of knowledge.
Secondly, you avoid the question as to wether the class was structured to
teach Amateur Radio. It obviously wasn't, but that answer in and of itself
disposes of your other rants as to why Amateur Radio related topics would be
discussed in that class.

>Seems like you want me to ask the following irrelevant additional questions:
>-Do you, or did you, have an amateur radio license.
>-Do YOU know Morse code.

How can anyone make an informed, balanced presentation on ANY subject
without practical experience in the subject matter, Vipul? By reading some

paper on it and then claiming "experience?

Would YOU want to undergo surgery by a surgeon who had actually done a surgical residency, or a guy who walked into the surgical suite reading "Brain Surgery Made Easy"...?!?!

The same goes for Amateur Radio. Have you ever attended an Amateur Radio related forum that was taught by somone who didn't have some practical experience in the subject matter? Would you know the difference?

>>And you did not answer the question about whether or not YOU served in the
>>Armed Forces of the United States.
>
>No, I did not. Just referring to US Army Survival Manual, in bookstore. FM
>21-76, if that means anything.

Yes it does. It means you found a book title that you can quote without having had any practical experience in the subject matter.

>K4YZ accuse me of creating non-real Prof. More and more facts revealed. Now
>Prof also worked in industry and designed Communication Systems.

What "facts", Vipul? You "tell" us this person allegedly did "this and
that", but you don't identify the person, nor do you tell us what companies,
schools, organizations, etc etc.

>Either this is an <out of control> growing fancy- or it must be true.

There's nothing fancy about anything you have presented. Of course I
don't think you meant "fancy", but you DO keep re-using the term.

>Also, I don't know Prof's ans. to Morse Question? I sincerely doubt that it
>has
>the qualities that make it most important mode.

The "most important mode" it the one that get's your data through when it
has to get through, regardless of wether you are talking about Morse Code,
voice or digital.

Although there are numerous Morse Code supporters in this forum as it
pertains to Amateur Radio, NO ONE, except you and Lennie, have claimed that
ANYONE has asserted Morse Code was the "most important mode", Vipul.

>Morse code could be:
>(1) most fun mode, since manual realtime encoding/decoding is fun.
>(2) least complex modulation mode (as listed on chart of modulation schemes).

Could be. You'll have to try to find out.

>I doubt Morse code has:
>(1) highest information rate - other modes seem to beat it.
>(2) lowest Bit Error Rate

Again, you'll have to try it to find out.

>(3) practical use for emergency comm - otherwise it would be in use.

It is in use. Tune to the bottom of any of the Amateur HF bands and take
a listen.

> growth industry, like one DXer on here?

I have no idea neither does anybody else, how do you count the number of cw Qs and/or the number operators per year who use cw and come up with any rigorous stats? Ya can't, that's ridiculous.

However I see three factors which are in the direction of at least maintaining the use of ham cw at it's present levels as a minimum. 1. The huge growth in interest in QRP operations where the advantages of cw really shine. 2. The modest growth in the number of participants in the cw dx contests. 3. The big bubble of aging baby boomers who came up thru the hobby in the 5/13/20 wpm regimes and who are now coming up on retirement and will have more time to play with their radios than they had when they were plodding thru the rat race.

Gonna be one helluva long time before anybody hears the last beep-beep.

It ended in 1973 for the people with "real military experience," i.e.,
combatants. It ended in 1975 for the paper pushers.

BS. There are many patriots who could care less about which party is
trying to outspend the other of our tax dollars. Many were even
patriots when being a patriot was a bad thing.

Universities are NOT in the business of teaching amateur radio so there is
no reason to mention. That one professor did and two others didn't doesn't
mean a thing.

>
> In one class a list of books was given. All were scholarly books. Other

Repeat: Universities are not in the business of teaching amateur radio. So
there is no need to reference ARRL publications.

>
> Actually, in my opinion, that would have made the class even better. I

Professors use either the books they themselves have written or those their collegues have written. They aren't going to use books writte by what are to them "outsiders." They want to keep the money in their own circle.

> In one antenna class proj, I used an ARRL pub. and this help me get the project

Again college professors will almost never list publications by those outside academia.

That's interesting, and telling.

But it applies even if both parties aren't "coders." Only one coder
is necessary for this to take place. For example, this is how Dave
greeted me. And this is how Larry greets virtually all newcomers.

Do tell, DICK. How does Len's lack of rudimentary psycho-motor,
modem-emulating skill translate to a lack of basic
radio-communications skill and/or knowledge?

Most intelligent people think that one has nothing to do with the
other. But then, you're not particularly intelligent, as you show
here at least a few times each day. Donkey. DICK.

>industrial comm systems does not mean that he is intimately familiar with
>the activities of the ham community.

Exactly, Dee.

My ham radio experience (licensed at the age of 13) always made me lean towards the practical end of things. I went to EE school (Moore School of EE, part of the University of Pennsylvania, class of 1976, birthplace of ENIAC, world's first general-pupose high-speed digital electronic computer) in part because of ham radio.

The emphasis at that school was on theory, but they told us WHY they did it that way. Technology changes so fast and unpredictably that the only way to keep up is to understand the underlying theory.

A true story from those days:

In electronic circuits class, we had Dr. Fred Ketterer. Excellent teacher, really knowledgeable and practical.

One day he draws a resistance-coupled common-source JFET amplifier on the board, asks what it will do. Everybody says "amplify the input signal". "Correct", says Prof. K.

Then he redraws it to use parallel-tuned LC input and output circuitsinstead of the resistors, both tuned to about the same RF frequency. Again he asks what it will do. Everybody but me says "amplify the input signal if it is near the tuned circuit frequency". I say "it may amplify, but it will probably oscillate". Rest of class thinks I'm nuts. Prof. K looks at me, smiles, says "You're a ham radio operator, aren't you?" Everyone was surprised because ham radio wasn't usually a class subject.

He went on to explain to the class that if the tuned circuit values were correct and the internal capacitances of the FET were adequate, the circuit would indeed oscillate. 'You have to use the right model" he said "the simplified model that ignored Cgd is not adequate for this analysis". Nobody ever forgot his practical examples.

Then there's the story of Prof. Weygandt and the impossible transmission line.....

Who cares, so what?

Even if no WMD are found, the Iraqi regime was so inherently
evil that the ending of that regime is of far more value towards
global and regional stabilization than any WMD aspect.

Cheers,

Thats a good point. One skill has nothing to do with they other.

In Ham radio, there is heavy emphasis on learning <the Morse code> realtime encoding skill. Recruitment of new Hams focuses on this area.

Hams don't want to learn the electronics aspect.

Hmmm -- interesting. Just what, precisely, is your basis for that statement?
What is it that makes you "pretty sure" that Iraq doesn't have any WMD's?
Before you answer, you may want to consider the fact that the UN's chief
weapons inspector, Hans Brakob -- er, sorry, I mean Hans Blix -- has
categorically confirmed the fact that Iraq does, indeed, possess WMD's and
the ability to produce them. It's just a matter of being able to find them --
which has been virtually impossible due to the deliberately deceitful
nature of the SH regime.

From K4YZ:
>The question was "Is the class organized to teach Amateur Radio?"
> You didn't answer the question. Why?

The class was not organized to teach amateur radio. I don't see how the application is relavant.

The class covered modulation schemes, including On-Off Keying. Therefore, one should be able to compare various modulation modes and know the advantages/disadvantages of each.

>First of all, you refuse to identify this fountain of knowledge.

Prof J Weitzen. What purpose does that serve? I hope you don't email him or something. I hope I don't regret this.

>How can anyone make an informed, balanced presentation on ANY subject
>without practical experience in the subject matter, Vipul?

Sorry, but I cannot see your point. I believe Prof really knows the material.

Prof did not just read about it. Prof has practical experience. He's worked in industry.

He knows the math behind the tradeoffs. In terms of modulation schemes, he has knowledge of how some of the most advanced modulation schemes work, their mathmatical derrivation, applications, advantages, disadvantages.

And you are saying he does not know where Morse code fits in?

>It means you found a book title that you can quote without
>having had any practical experience in the subject matter.

Please find a source that gives praise to Morse code. We know it has some benefit (least complex modulation mode), easy to build.

Now, why is Morse code so important that it is in between the General (written) test and required for HF.

Bill, I understand your sentiment. I also agree that evil is a bad thing.
But I'm not so sure that the US gov't. or military needs to start marching
in and changing things here and there. So far, we're only talking about
Iraq. My fear is what next? I don't know...I just don't think it's right.
I really don't. I think getting into messes like that is biting off much
more than we can chew, militarily, politically, etc.

>>radio. Probably, has never heard of it.
>
> Or it could be that it just wasn't germane to the class objectives,

For antenna class, it probably was not relavant. The class had advanced math equations every single week. Maxwell's eq, field eqs., boundary cond, etc were utilized.

>>Not even one reference to an ARRL publication or article or about amateur
>>radio.
>
>Or it could be that it just wasn't germane to the class objectives,
>Vipul.

For rf devices class, ARRL pub was very relavant to the class objectives.

Class notes were from textbooks and from IEEE articles. The device models and circuit applications were better explained in an ARRL book than the textbook. If the ARRL pub book gave better explanation on a topic, it should have been utilized.

From: "Dee D. Flint" deehays@qix.net
>Universities are not in the business of teaching amateur radio. So
>there is no need to reference ARRL publications.

The subject was (active) rf devices, not amateur radio. There are ARRL publications on technical topics, in case you did not know.

Any technical publication which covers the class topic could be utilized. This prof did not use ARRL pub, probably because he has never seen one in academics.

The ARRL pub did cover the topic better that the textbook. There was a better explaination, practical examples, construction info. And, it did not sacrifice on the math.

If an ARRL pub. teaches the subject matter better, it should be utilized.

Exactly. And evil wins when honorable and honest people
stand by and do nothing when confronted by evil.

> But I'm not so sure that the US gov't. or military needs to start marching
> in and changing things here and there.

Sadly, you sound like too many of the anti-war groupies
who believe that because we do one thing in Iraq, we will or
must do the same thing in other places. The lesson to be learned
here is that we are not impotent nor unwilling to take needed
action when it warrants such.

> So far, we're only talking about
> Iraq. My fear is what next? I don't know...I just don't think it's
right.

> I really don't. I think getting into messes like that is biting off much

I strongly disagree with your sentiments. We enjoy a democratic
system and the fruits of that system's 200+ years of success.
We have (IMHO) a moral obligation to confront extreme
evil when it threatens us in the long run.

Cheers,
Bill K2UNK

Well, since you asked, the mix was about 65 percent male. The age distribution was all over the place. There were husbands and wives, of which I'm not sure which was the ham. Many of them had their family with them. There were some late teen/early twenty hams with their girlfriends. I didn't see any babies; the youngest person there was around 5 y.o. or so. There was an amazingly elderly fellow, I would guess upper 90's. He looked ancient, but was getting along well, bless him. Pretty much all age groups were represented. The only stereotypical person was that computer salesperson, and I felt sorry for him. He must have been carrying 500 pounds.

The most nerdy thing was the call sign hats. But how is *that* considered nerdy when NASCAR fans can run around with the number of their favorite racer on a hat, and put decals of that cartoon character "Calvin" urinating on their least favorite drivers number on the back of their pickup truck window? And lastly, how did I do at making a big run-on sentence? 8^)

Title 47 United States Code is NOT made to satisfy any
octogenarians or promote morse code use. It is simply the
regulations pertaining to ALL United States civil radio.

Now hear this: In the last half century I've operated more
frequencies, more power, more modes than was ever

allocated to US radio amateurs ever. That is NOT the
subject.

The subject is NOT about working, striving, resolute
sacrifice or any other dumas thing about morse code...or
any "crying or moaning in privies."

This particular thread is all about one antagonistic sociopathic
amateur shouting and barking orders to another he wishes to
humiliate. It's that simple.

>> 2. Have been in radio communications for years and never used it?
>
>Lots of folk passed their respective code tests to ear their HF privies and
>then never used code again. There's certainly nothing wrong with that.

There MUST be when the only radio service still using morse
code for communications in the USA is amateur radio. Aren't
you a full member of the Archaic Radiotelegraphy Society?

>> 3. Noted that no other radio service uses it any more or never
>> planned to use it in that service at all?
>
>Apples and oranges, Len?

No fruit involved. See another thread where certain folks are
all upset about California agricultural inspection stations.

>> 4. Don't buy into the fantasy mystique of the Way of Morse?
>
>I didn't buy into anything and nobody sold it to me either. I wanted to
>become an ARO and operate on HF.

I operated on HF a half century ago as of the end of February.

Never used any morse code anything. Never HAD to.

>I researched the requirements. I studied to
>satisfy said requirements. All in all, MUCH less arduous than whining about
>the unfairness of it all. In studying for and passing Element 1, I found
>that I kinda liked the code.

That's nice. But you are not a role model for the retention of any
morse code test for thousands upon thousands of new licensees
in the future, are you?

Some people like anything. Others have great difficulty with
morse code. Most are indifferent and don't even bother to use
it. I've never had to use morse code in ANY radio service in
the past half century.

>I learned at approx. 15-wpm w/a character
>spacing of 5-wpm. Now, I'm up to 25-wpm w/a character spacing of 6-wpm. Does
>that mean I'm "proficient?" Heck no! Element 1 was just an entry level exam

>designed to give one a "taste." The resulting ticket is just a license to
>learn. (But it has always been the individual's choice as to how far and in
>what dir'n they wish to progress.)

Personal experience stories are always interesting. However,
only a certain KIND of experience is "acceptible" to the PCTA.

>> 5. Don't believe that time stands still with no progress in any
>> technology such as some olde-tyme amateurs?
>
>So retaining Element 1 retards the growth of other technologies in AR? LMAO!

Yes. In the 9 years before the recent US amateur radio
restructuring, the number of new licensees granted were
for the NO-CODE Technician class. Over 200,000 such.

Had it not been for the NO-CODE Technician class license,
today's total US amateur radio licensees would be shrinking
in number, not creeping slowly higher.

PCTAs in here cannot accept that fact and remain in denial
of the truth as if they were in the spirit of the Iraqi Ministry
of Information. Not my problem. Theirs.

>> >> What is the International Amateur Radio Union's viewpoint on the

>
>Guess their not up to your standards, Len.

They aren't quite up to the standards of radio amateurs in the
UK, Denmark, Sweden, or the Netherlands.

"Get out more" and read up on what European amateurs are
doing...not just the hand-picked snippets of information allowed
to be seen by the editors of QST.

>> Nearly ALL countries are involved in expansion of commercial
>> radio-electronics with little regard for hobby-leisure pursuits
>> involving amateur radio and the furtherance of the morse code
>> state of the art.
>
>The PARTICIPANTS of hobby radio take care of that. Get it, Len?

Circular logic, Bert. You are going in circles.

To become a participant in something, such as amateur radio,
one has to get into it. To do that with a license having below-
30-MHz privileges requires demonstrating morse code
cognition in a test. That's the law. [are you with me so far?]

There are several things wrong with the above. First of all,
the HOBBY of radio does not necessarily require any license
whatsoever. No illegal transmission, no license needed.
That is ALSO the law. [read all the parts, not just one]

There has always been a morse code test for an amateur
radio license. That is true through the four different federal
radio regulatory agencies that existed in the USA since 1912.
Does that mean that a morse code test will ALWAYS be
required for an amateur radio license?

-> NO <-

No divine will has stated that any morse code test MUST be
kept as law forever more. There is NO technical reason to
require any such morse code test. The only reason is some
archaic statement by olde-tymer amateurs who have
demanded that be included under ITU-R regulations years ago.
The FCC wants to drop morse code testing but cannot...the
US administration must keep to its UN membership and follow
the ITU in matters of communications.

>That's why
>the NCTA's cry (Very appropriate word.) of "well, the FCC says so" is
>childish.

No. Not "childish."

What is CHILDISH, ILLOGICAL, INVALID is a minority desiring
to control a majority over a minor emotional matter that requires
a particular physical-mental aptitude for licensing.

FCC grants US amateur radio licenses...not the "ARS community,"
not Bert Craig, not some 82-year-old ragchew partner, not a bunch
of appliance operators whose only "radio knowledge and
experience" is working DX on HF with CW.

The FCC wanted to drop morse code testing in 1990. It said that
again in 1999. Publicly.

>That's also why the NCTA's are scared to death of a honest vote by
>the some odd 685,000 licensed US ARO's re. the retention of Element 1.

Tsk, tsk, tsk, Bert. You have Delusions of Grandeur! Get help!

YOU don't have ANY such honest tally of "685,000 licensed
AROs" who allegedly support the "retention of Element 1."

That's such a bogus statement that my only question is "when
were you in Baghdad working for the Iraqi Ministry of
Information?" [I don't really want to know...the FBI might...]

>> >Sadly, many amateur radio
>> >"organizations" do not echo the sentiments of the majority of their

>
>Sure it does. The mere suggestion of a fair vote brings out the "well, daddy
>(The FCC) says so" :-p responses, when it's clear that "daddy" couldn't care
>less. Prettty lame, Len.

No. What is "lame" is your Delusional statement above.

>> Morse code mode is on the way of becoming
>> defunct, extinct to every other radio service in the world
>> except amateur radio.
>
>Reread your statement, Len. It's saying something.

Morse code mode is on the way of becoming defunct,
extinct. [honest truth in worldwide radio use]

Morse code is used solely by the minority in amateur radio
that love morse code mode.

Do you want to dictate what the other "685,000" should like?

Why?

>> If the PCTAs continue their fantasy
>> and mythology of the Way of Morse, then they too will
>> become defunct, extinct, archaeological exhibits in a living
>> museum of archaic radio.
>
>You mean like me, Len? I'm a newbie and I like Morse code. How about mu
>5-yr. old lass, perhaps she'll be "laughing at the lazy" when I'm an OT?

If the PCTAs continuetheir fantasy and mythology of
the Way of Morse, then they too will become defunct,
extinct, archaeological exhibits in a living museum of
archaic radio.

Feel free to identify with what I wrote any way you want.

>> ARRL "leadership" is not my concern.
>
>What is your concern, Len?

It isn't concern for you.

It isn't concern for members of the Archaic Radiotelegraphy
Society.

It isn't for the Gang of Four in here.

I said some while ago that my purpose in here was to argue
against the continuation of a morse code test for any US radio
amateur license. That is an on-going purpose.

>> They do NOT "represent"
>> me nor do they "represent" anyone but a minority of licensed
>> US radio amateur licensees.
>
>Agreed.
>
>> ARRL does have a large enough membership and economic
>> means to lobby for the maintenance of the Archaic Radio-
>> telegraphy Society desires in a hobby pursuit and radio
>> regulations pertaining to amateur radio.
>
>We'll take what we can get.

That's ALL you will get. You will get what ARRL decides you
should get. No more.

>> News: I've been federally licensed in radio since 1956...just not
>> in amateur radio.
>
>So why are you here, Len? This is an AMATEUR RADIO newsgroup.

My purpose here is to argue for the elimination of all morse
code tests for any US amateur radio license.

"Amateur radio" doesn't have to equate with Archaic Radiotelegraphy,
does it?

The Gang of Four doesn't like my presence in here. Apparently you
don't either. TS.

Try not to act like a newsgroup cop. Your Kode Kop badge is dirty.

>>Forces of the Untied States?
>
>The Army survival manual is available in bookstore.

A number of current US Army training documents are available
at the Army's Training and Doctrine Digital Library (named for
General Dennis Reimer, former four-year Army Chief of Staff).

http://www.adtdl.army.mil/atdls.htm

Click on the "Library" button (one of eight). Then click on "Official Documents" on the Library page. That allows anyone to view or download any training circular, field manual (FM), or technical manual (TM) released for public distribution. Those are all free. [the US government cannot copyright its own publications in case anyone doesn't know that]

I've had a copy of FM 24-24 for over five years now, a virtual catalog of ALL US Signal equipment as of 1994. There are over 300 other FMs available free of charge at www.adtdl.army.mil, and hundreds more documents.

What might be of interest to military-interest types is a new FM recently added, FM 3-06.11 (formerly FM 90-10-1 under the older numbering system). It is dated 2002 and describes, in detail, doctrine for "UO" or Urban Operations. It is very detailed on urban sites worldwide, even to describing building types and typical structural arrangements. The release date is timely considering the present Gulf War... :-)

>
>Currently there are more than 250,000 US amateur radio licensees shown in the
>database as "Technician". Have any of them passed code tests? Do any of them
>have HF amateur privileges?

Here's a simple request for you:

Fund a personal DSL line or send me a CD-ROM with the full FCC
amateur radio database on it and I might write a search program
and totalization for any field of data...then present the totals in here
free of charge.

I'm NOT going to limit searches to some pre-biased conclusion
reaching. I'm NOT going to bias anything.

There's one problem and why I wrote "might" instead of "will"
above:

You can't handle the truth.

The present database size from the FCC prohibits downloading
over dial-up telephone lines in any reasonable amount of time.
DSL service makes it reasonable. Program writing is a trivial
task...I can even do it in FORTRAN. Database file size is not
a problem here...I have a 40 GB hard disk with 34 GB free. :-)

In the past the FCC database information on amateurs was
sectioned off by postal zip-code groups with smaller file sizes.

In doing some past raw database information sorting, I've
presented number results. The end result in here was:

You can't handle the truth.

There's really no point in continuing with the farcical charade
of your "simple questions." You continue to insist on biased
sorting and statistical interpretations to fit your agenda.

No problem. Your requests are denied.

>Why? You're the one pushing an agenda, you provide reasonable numbers.

Provide some reasonable handling of raw numbers and we
might take your interpretation seriously.

You are a PCTA. You have to keep the morse code test.

You can't envision US amateur radio as anything but a
transistorized Archaic Radiotelegraphy Society.

>>Keep it reasonable.
>
>You are invited to do the research needed to support your claims. You
>obviously care much more about this than anyone else.

Research has been done by others, with accurate numbers
and reasonable presentations. You refuse to accept such
reasonable presentations. You have an agenda. You are
PCTA.

>>We'll keep working the numbers until we can show Morse Code as a
>>growth industry as one "great" DXer would like it to be.
>>
>"Growth industry"? Amateur Radio is "not for pecuniary interest", so it can't

>can be an industry, though.

Tsk, tsk, tsk. Arguing about metaphor use. :-)

Metaphors be with you, morseman.

Aggression and antagonism aren't "reasonable."

You are a PCTA. You have an agenda.

>And if we look at the number of manufacturers making and selling Morse Code
>related hardware and software today, as compared to 10, 20, 30 years ago,

>it's clear that part of the industry is growing. With or without a test.

ANTIQUE collecting is a continual growing industry.

There's even two antique shows on television covering appraisals of antiques. There are thousands of eastern USA shops specializing in antiques.

There are no TV programs about morse code in the USA. In fact, there is stagnation (and some arguable drop-off) in the number of shops specializing in amateur radio equipment.

Come to think of it, there are no TV programs about amateur radio in the USA cable or broadcast schedule listings. Never have been.

There are at least two TV programs about antiques in those cable and broadcast schedule listings. Those weren't there 30 years ago.

To paraphrase, you have a morse key and everything looks like beeping to you.

>the WMD won't materialize.

Hopefully it won't. No one knows for sure. There are NO
certainties in life or warfare. There are only probabilities
based on past events. These are:

Iraq has used chemical weapons against Iran in the 8-year
Iraq-Iran war.

Iraq has used chemical weapons to kill thousands of its own
people who were against the Ba'ath Party in power.

Hundreds, perhaps thousands of gas masks and protective
gear kits have been found in Iraqi military supply caches so
far by coalition forces.

UN inspectors have found evidence of some limited capability
of the Iraqi military to use chemical weapons, biological
weapons and has been researching the design and use of
atomic weapons.

>What's the *real* reason? Goodness, if I could get into the head(s) of the
>President et al, maybe I could tell you. Maybe it's as simple as

>United States and Britain (for the most part), have a lot of 'splaining to
>do--is what the rest of the world is thinking I'm sure. We'll (the world)
>see what happens.

One very "real" reason is staring everyone in the face yet so many
appear oblivious or in such deep denial that they cannot see it.

"(the world)" has very recently - in less than a century past - seen
a number of dictatorships rise up and carry their nations into a
path of conquest by force of arms. After a relatively bloodless
military takeover of government, Japan started on a path of military
conquest of Asia in the 1930s and was well on its way on that
path before the USA became involved. The USSR began the
Cold War just after WW2, bent on the Communist goals of
converting the entire world to communism...first with the political
annexation of much of middle Europe and including the physical
separation of east and west Germanies, the Berlin Blockade of
1948, attempted communist revolutions in Greece, Indonesia,
the Philippines. [the Indonesian Civil War was brutal and
bloody, very down-played in USA news] North Korea, under a
communist regime, invaded South Korea in 1950, Communist
China aiding them militarily a short half year or so after invasion.
Communist Vietnamese forces drove out the French from
French Indochina (as it was called) in an 8-year civil war that
began during the last year of WW2. Israel and neighboring
Arab states erupted in four separate wars (two started by each
side) after 1948...and, in addition, the UK and France took over
(briefly) the Suez Canal territory with the USA remaining a
neutral and later being part of the UN Peacekeeping force in the
Sinai. "(the world)" reacted to most of that with great reluctance
to get involved in friends and neighbors open warfare.

We can touch on the National Socialist Party of Germany in the
1930s to 1940s. They were open military aggressors of Europe
leading Germany as the conquering invader of nearly all of it.
NAZI Germany practiced a religious genocide so massive, so
ugly, that over 6 million humans were put to death...while "(the
world)" did nothing or turned a blind eye to what was happening.

Advance to 1980. The Ba'ath Party had taken over Iraq and Saddam Hussein had become the dictatorial leader of Iraq. They went to war with Iran, kept that war going for 8 years. "(the world)" reported it but did nothing.

Skip to 1990. Iraq invaded Kuwait, a much smaller country but wealthy in oil reserves. "(the world)" or rather a part of it, finally did something by pushing Iraq back out of Kuwait. A problem was that "(the world)" didn't want to do anything more...they did not really punish Iraq or its dictator, just hemmed them in with embargoes and no-fly zones. Saddam Hussein remained in absolute power for a dozen years more, tightening his control over Iraq, building up his military from oil profits that could have been used for Iraqi citizens. He also ordered the slaughter of dissident Kurds in northern Iraq by chemical weapons.

"(the world)" didn't do much. Some of "(the world)" thought that UN inspectors were enough...even though they were few and unarmed. Most of "(the world)" simply turned away from the problem of known Iraqi aggression hoping it would solve itself. "(the world)" has exhibited a regular denial of growing problems for more than a century of recorded history...doing nothing until some aggressor finally invaded another country. The examples literally fill books of history just for the past century.

There hasn't been any case of "(the world)" doing ANY pre-emptory action in that past century until 2003 and the combined UK and USA militaries in Iraq. The danger was clear and present for two decades. "(the world)" could continue to do nothing until the final acts, then maybe try to do something after many died needlessly in fighting the aggressors.

"(the world)" has reached an important place in human history...the USA and UK have decided to take action NOW and stop the cancer of aggression, remove it before it spreads and requires needless killing on a much larger scale later. That's a gutsy decision, but it may turn out to be of greater overall world benefit than sitting back and doing nothing. It may also be a faulty decision but that won't be known beforehand either. "(the world)" has had a habit of doing nothing for a century until it was too late to stop some power-hungry megalomaniac from killing millions of human beings.

Sitting back and doing nothing is very safe. No one gets involved. Everything happens somewhere else and concerns others. Nobody at home gets hurt. Nobody has invaded the USA with any military force. No problem.

That's what the USA thought on a peaceful Sunday on the 7th of December, 1941.

>that you deserve dignity, even though I may disagree with the way you think.

Only a slight disagreement with the last. As a veteran, I can
speak with as much "authority" to any other veteran of the
military. They will not always accept such "authority" since

the military's primary task is fighting. [one sees evidence in
here that some cannot stop fighting long after service days]

But, that disagreement with you is very small compared to the
overall issue of actually behaving under democratic principles.

>It seems to me you are stopping way short of allowing anyone who thinks
>differently than you, any dignity at all.

That's an unfortunate truism.

>> You being a 'military brat' should know of the day to day sacrifices they
>> make. And when one does it for twenty or more years, then they deserve it
>> even more.
>
>With no disrespect intended, Dan--it is not just soldiers/cops/fireman,
>etc., who go out into this world ever day and make sacrifices.

Sorry, strong disagreement when talking of war and warfare.

"Sacrifice" of a life is ultimate. Worry, concern, etc., expressed
by parents, friends, acquaintences is not really sacrifice...unless
used by journalists loading their stories with emotional bias in
hopes of winning Pulitzer Prizes.

There is a HUGE gulf separating those "back home" watching
and listening to news, reading their newspapers with a cup of
coffee, and imagining "what it is like" compared to actually
being out in the field facing the distinct possibility of wounding
and death 24/7 whether remote or up-close and personal.

>
> For fruits? Man, doesn't the CHP have better things to do?

The CHP does and does many things 24/7.

>I wonder what
>would happen if someone ran one of these agricultural inspection stations?

Pursuit with their vehicle identified to the CHP network.
It happens rarely, but it does happen.
Breaking the law is breaking the law.

>Would the CHP give pursuit? Would they be authorized to use deadly force to
>stop the vehicle?

Why do you take your comments to the absurd?

Someone "running" (failing to stop) an inspection station will
be pursued one way or another. That makes them subject to
arrest since they did not obey a lawful order to submit to a
vehicle inspection.

If you jaywalk a city street are city police going to use "deadly
force" to stop your jaywalking? That's the sort of absurd
question just like what you asked.

>Can a person be placed in jail for having the wrong Orange
>or Apple in the vehicle?

No. Failure to submit to an inspection could be taken as
resisting lawful orders. "Running" an inspection station could
be taken as resisting arrest.

Being held for an arrest is not an automatic imprisonment.
That is not always being "placed in jail."

>> I'd call it protection of the state. :-)
>
> I call it protection of the wealthy fruit farmers.

I'd call it protection for farmers and about a million or so
farm workers depending on reasonably disease-free
agricultural products.

If you harbor resentment over the wealth of fruit farmers, you
can take passive action by not buying their products. If no
one buys their products they cannot remain "wealthy." That
way you can also make a million or so farm workers
unemployed, resentful at some paranoid do-gooders who
think that they have the freedom to live an anarchic life.

>>> Why aren't travelers reimbursed for the items
>>> seized at these inspection stations?
>>
>> Why?
>
> Because the items seized are their property, seized without due process of
>law.

Sorry, invalid. There IS law on the subject. Has been for quite a
while now. You are invited to pursue the subject further through
higher California state courts.

>> (snip) "Free and unrestricted travel across this
>> country" does NOT mean some absolute freedom to do
>> anything you want.
>
> Certainly not the freedom to bring whatever fruit I want with me into the
>state of California.

Very well, do you wish to extend this to a "freedom" of being
able to carry a virus or bacteria into the state to spread
disease instead? How about SAR? Carriers of disease may
be free of symptoms yet are able to infect others.

>> Okay, whatever. Doesn't have anything to do
>> with "No more FCC regulation," does it? :-)
>
> Of course it does. You should know that by now. :)

...grant someone an amateur radio license and they suddenly
"know everything about everything." Tsk, tsk, tsk.

1999. Remote Weather Station Licensing

Newsgroup: rec.radio.amateur.policy
Date: 2003-04-07 04:36:42 UTC
From: Fritz Wuehler <fritz@rodent.frell.eu.org>
Message-ID: <151ef060b2a8d5a8a559d7b25fc3c158@remailer.frell.eu.org>
Source record: 64236
Cross-posted to: rec.radio.amateur.policy,rec.radio.amateur.misc

Greetings - I'm a new Tech. licensee interested in building a remote weather station for use on the coast to monitor wind conditions. The technology is not a problem for me (MSEE with 10 years experience in UHF wireless), but I can't figure out the regulatory end of it (IANAL).

What I want: an autonomous weather station that broadcasts wind data at least every three minutes. Just to give you an idea of how much data I'm talking about, a few 1200 baud APRS (e.g. with the TAPR APRS PIC-E system) packets would be plenty - it's not much data.

My concerns: this is not a backyard affair attached to my personal station - it would be a standalone broadcast unit (or perhaps an autoresponder?). I don't think my personal callsign is legal for use here. It seems like a lot of people do what I'm talking about via APRS, but I'm not so sure about the autonomous station issue. Repeaters get their own licenses - what about weather stations?

I've thought about going to Part 18 ISM rules instead with a 902 MHz line-of-sight link, but that's not a clear regulatory option, either. Neither is Part 15 (I don't want to have to certify compliance). I think it really is a HAM-related activity, but I don't understand the operations portion.

Does anyone have an idea of the basis on which I might license such a station?

Thanks!

Bill Alexander

1. The US Department of Defense marks the end of the Vietnam War as 27 January 1973.

2. There was a negotiated cease-fire that was supposed to have begun on 27 January 1973. That never happened.

3. The reunification of the Republic of Vietnam happened officially on 2 July 1976.

4. Kellie NEVER served in the US military in any capacity.

5. Kellie needs to have his Prozac prescription refilled.

> official answer to that question.

You must not have looked very hard because the topic was discussed thoroughly at the time and later. The key reasons were 1) that the coalition was created specifically to eject Iraq from Kuwait and was operating under a UN Security Council resolution limited to that purpose; 2) that there was a reluctance among some members of the coalition, particularly Arab states, to extend the mission to the military overthrow of Saddam for fear that Iraq would break apart in ethnic warfare that would spread to the neighboring Arab states; 3) that the mission had been accomplished at a cost in coalition lives dramatically lower than even the most optimistic prewar projection and that good fortune was unlikely to continue if the forces continued on to Baghdad; and 4) that there was an expectation that Saddam had been weakened enough that he was nearly certain to be overthrown from within anyway.

Quotes:

The ending wasn't quite as clean as it might have been if Saddam Hussein had come to that tent [at Safwan on March 3, 1991], laid down his thing and maybe left office ... I miscalculated. I thought he'd be gone ... We might have handled the flying of helicopters differently. So I think there's room for some ex post facto criticism here ... [But] I think history will say we did the right thing.
--Former President George Bush, PBS interview with David Frost, aired January 1996 (taped Dec. 12, 1995).

We had a crucial but limited objective in the Gulf War: to reverse Iraqi aggression, and to cripple Saddam's offensive military capabilities ... Occupying Iraq with thousands of American troops for the indefinite future and creating a gaping power vacuum in the Persian Gulf for Iran to fill [is what would have happened] if we had pressed on to Baghdad in 1991.
--Brent Scowcroft, national security adviser, 1991. "Why We Stopped the Gulf War," Newsweek, Sept. 23, 1996, p. 3.

I was just damned glad to have the victory in our hands with the minimum loss of casualties, and I was willing to settle for that because that's a hell of a lot more than anybody's had in a war as long as I can remember.
--Gen. H. Norman Schwarzkopf, commander, U.S. Central Command, "The Gulf War," Frontline, Jan. 9-10, 1996.

So of all the criticism of Bush Administration decision-making during Operations Desert Shield and Desert Storm, it is this marching-to-Baghdad canard that has the least merit. As a diplomatic, political or even military matter, marching to Baghdad would have been a disaster in the making.
Iraq might have fragmented in unpredictable ways, which would have played into the hands of the mullahs in Iran. The mullahs could have exported their brand of Islamic fundamentalism with the help of Iraq's Shiites and quickly transformed themselves into the dominant regional power. (Past tense added.)
--James A. Baker, III, secretary of state, 1989-92. "Why U.S. Did Not March on to Baghdad," Washington Times, Sept. 11, 1996.

> other places.

But doesn't "evil [win] when honorable and honest people stand by and do nothing when confronted by evil"? If you truly belive that, why don't you think that the US should eliminate evil everywhere? Is there any reason other than practicalities that should check the US from attacking evil regimes wherever they exist? And what are the characteristics of a regime that make it evil?

Those are the questions that makes a lot of people in the world nervous about the Bush administration's preemptive war doctrine.

> The lesson to be learned
> here is that we are not impotent nor unwilling to take needed action
> when it warrants such.

Ah, but the "when it warrants" is the problem. There is a fear outside the borders of the US that the present US government will pay no attention to what anyone outside the US thinks or to how US actions will affect them. And based on its behavior to date, that's not an unrealistic concern.

No.... it would be FAST MORSE CODE, not FAST CW. CW is a method of
transmission and morse code is the encoding/decoding stream sent over the
transmission signal. There is a difference.

Amateur Radio Newsline™ Report 1338 April 4, 2003

Amateur Radio Newsline report number 1338 with a release date of Friday, April 4th, 2003 to follow in 5-4-3-2-1.

The following is a Q-S-T. A day to honor ham radio operators world-wide and a ham satellite on hold. These stories are first on Amateur Radio Newsline report number 1338 coming your way right now.

(Billboard Cart Here)

**

RADIO HONORS: WORLD AMATEUR RADIO DAY

Amateur Radio Supporting Education' is theme for World Amateur Radio Day. Its coming up real soon. RSGB newsreader Jeramy Boot, G4NJH, is here with the details:

--

The theme of this year's IARU World Amateur Radio Day is to be 'Amateur Radio supporting technology education in the classroom'.

World Amateur Radio Day is marked on the 18th of April each year to commemorate the anniversary of the founding of the International Amateur Radio Union on that date in 1925.

Ole Garpestad, LA2RR, the Chairman of IARU Region 1 writes: "There is no doubt that the future of amateur radio belongs to those that are now in the classroom. In keeping with this theme, I would like to encourage every society in the Region to let our young people know that amateur radio is a unique hobby - simultaneously sport, scientific study, personal pleasure and collective activity. And that radio amateurs today are voluntary and selfless researchers in the technological field of amateur radio, an important resource to every country, and something to be proud of."

"But the 18th of April is not only a day to think about our future, it is our day, a day for celebration. All of us, societies and individuals, can celebrate in our various ways - organizing presentations, club meetings, parties, honoring senior radio amateurs who go back to the early years of IARU, or just putting our equipment on the air and making just a single QSO on this day, so realizing how large our ham community is."

Jeramy Boot, G4NJH

--

Again, the date for this years World Amateur Radio Day is Friday, April 18th. (GB2RS)

**

HAM RADIO IN SPACE: PROJECT EAGLE ON HOLD

Plans to launch one of two new ham radio satellites have been put on hold. The reason for the setback can be traced to one word: Funding.

The bird in question is named Project Eagle. It, along with the Project Echo ham-sat is one of two birds that AMSAT had previously announced for development.

According to AMSAT North America President Robin Haighton, VE3FRH, the current levels of contributions to the amateur satellite organization are not enough to pay for building and launching both future satellites. One of two projects has to be put on hold and furloughing Eagle has been the decision.

Up until now AMSAT North America had been working on both new satellites simultaneously. While ECHO is still on schedule for possible launch later this year, the launch of Eagle has been delayed indefinitely. (AMSAT)

**

HAM RADIO IN SPACE: TWO-HAM CREW HEADED TO THE ISS

Just as ARISS Chaiman Frank Bauer, KA3HDO, predicted a few weeks ago, two ham radio operators will be replacing the current three man crew on board the International Space Station. A NASA announcement identifies the latest space adventures as U-S astronaut Ed Lu and Russian cosmonaut Yuri Malenchenko.

Lu holds the call sign KC5WKJ while Malenchenko is RK3DUP. They will comprise the Expedition 7 crew, replacing Expedition 6 astronauts and Ken Bowersox, KD5JBP, Don Pettit, KD5MDT, and Russian cosmonaut Nikolai Budarin.

NASA and its partners decided on manning the ISS with two space explorers instead of three as an interim measure until the U-S space shuttles are flying again. A two man crew conserves on the amount of vital supplies needed for on-orbit life.

Three person crews will resume when the Columbia disaster investigation is concluded and the space shuttles take to the sky again. The three remaining Shuttles in NASA's fleet Endeavour, Atlantis, and Discovery have been grounded until the cause of the Columbia accident can be determined and safety changes implemented.

NASA's Return to Flight team has been told to complete their initial tasks in time to support the earliest possible launch date, which would be this fall. But officials of the space agency say that it could take

months longer to prepare the shuttles to fly again. (From published news reports)

HAM RADIO AT WAR: DOING BATTLE WITHIN

Ham radio is supposed to transcend international politics, but you would never know this by the on-air antics of one unnamed Ukrainian radio amateur and a few stateside hams.

Lets start with a post on the QCWA remailer by Bob Harvey, K2PI. Harvey says that he heard the Ukrainian operating a contest on March 30th. Thats not news in itself except that the Ukrainian was refusing to work United States or U-K amateurs because of the war in Iraq.

Harvey writes that the Ukrainian said to call him only if you supported his view that the United States was conducting an illegal and evil war. Needless to he had no QSO's with any American or British hams.

But theres another side to it. John Sielke, W2AGN comments over the same QCWA remailer on the plight of a French ham friend of his. W2AGN says that the guy was harassed off of another ham radio remailer only because he was French and the other hams did not agree with France's anti-war stand. Sielke says that the unidentified French ham was truly vilified even though he had made no comments concerning Iraq or politics. He was just attacked purely because he was French. (QCWA Reflector)

RADIO RULES: FCC CONSIDERS INTERFERENCE IMMUNITY FOR RECIEVERS

We predicted a month ago that it would happen. Now comes word that the FCC has issued a Notice of Inquiry, seeking comments on possibly requiring receiver manufacturers to build in a certain level of interference immunity. Bill Pasternak, WA6ITF, has more:

--
As noted on the CQ Magazine website and elsewhere in cyberspace, amateurs have been frustrated for years by trying to explain to neighbors that interference problems were really the result of poor design. Bad engineering in their TVs, stereos, cordless phones and other receivers.

Now, because of the need to protect Digital Television transmissions, the FCC is seeking comments on the current immunity performance and interference tolerance of existing receivers. Its also looking at the possibilities for improving receiver immunity in the not to distant future.

The FCC says that it is soliciting input from the public on possible approaches to achieving desired levels of receiver immunity. This runs the gammit from better product warning labels to the possibility of implementing mandatory standards governing the manufacture, import and sale of consumer electronics reception gear.

It is all in FCC E-T Docket 03-65. You will find it on the web by using the document search engine at www.fcc.gov.

For the Amateur Radio Newsline, I'm Bill Pasternak, WA6ITF

--

Again the inquirtey into interference immunity standards can be found in FCC E-T Docket 03-65. (CQ Website, FCC)

**

FCC: VANITY FEES MAY BE GOING UP

If you are planning to go for a vanity call sign, do it now or be prepared to pay a few cents more. The proposed hike to $16.30 for a vanity call comes in an FCC Notice of Proposed Rule Making dealing with fee collection matters released on March 26th. Its all in M-D Docket No. 03-83 and comments on it are due no later than April 25th. (From FCC release)

**

ENFORCEMENT: FCC - YOU SOLVE THE PROBLEM

The FCC has told the operators of two competing repeaters that its not going to solve the dispute between them. The agency's Daryl Duckworth, NN0W, explains:

--

Duckworth: "The Enforcement Bureau has written to Grearal Gogue of Conway Arkansas, David Stone of Morrelton, Arkansas and Tom Lee of Jerusalem, Arkansas, regarding repeaters AC5RU and KD5CYA. In the letter it was stated after reviewing the submissions of all relevant information, we declined to intervene in this dispute. It is our position, that in this case, both parties are responsible for solving the interference and we urged them to so in the best interests of Amateur Radio."

--

In this case, two repeaters sharing the same frequency claim mutual interference. On May 24, 2000, the FCC opened an inquiry about

allegations that Lee's AC5RU system was causing harmful interference to coordinated repeater KD5CYA, licensed to Gerald Hogue. The allegations stated that Lee's repeater was uncoordinated because the coordination had been forfeited by numerous changes in location.

On August 14, 2000, the FCC notified Lee that it was his responsibility to prevent interference to KD5CYA inasmuch as it appeared to be the coordinated repeater. On September 14, 2000, after reviewing Lee's lengthy response, the FCC rescinded its requirement that Lee solve the interference to the KD5CYA repeater. This is because it was unclear to the FCC as to which repeater was properly coordinated. The Commission said that it was not an appropriate matter for enforcement action. It also urged the parties to take advantage of the mediation and dispute resolution program of the ARRL but one declined.

Lee submitted additional information on January 5, 2001. On February 8, 2001, after receiving additional documents from all parties, the FCC stated that although it failed to see why mediation or arbitration would not be a viable option, we nevertheless agreed to review the matter once again. In response to allegations of deliberate interference, we cautioned everyone involved to cooperate in the resolution of this matter.

Now, almost two years later the FCC has again said its not going to act. It says that after reviewing the submissions and all relevant information, that it will not intervene in this dispute. The agency says that in this case, both parties are responsible for solving the interference and it urges them to do so in the best interests of Amateur Radio. (FCC, RAIN)

**

AT THE FCC: MULETA NEW WTB CHIEF

John Muleta is the new Chief of the FCC's Wireless Telecommunications Bureau, which regulates amateur radio along with other two-way radio services. According to the ARRL, Muleta worked for the FCC from 1994 to 1998 and his positions included Chief of the Enforcement Division. He has also worked in the private sector since 1998. Muleta succeeds Thomas Sugrue, who headed the bureau the last four years. (ARRL)

**

RADIO LAW: CONGRESS APPROVES DIFFERENT AMBER ALERT MEASURES

The United States House of Representatives has approved creation of a nationwide Amber Alert network. The action came on Thursday, March 27th after politicians on both sides of the aisle attached several additional child protection measures to the bill.

The bill, approved by a 410 to 14 vote, now goes to the Senate, which earlier approved legislation authorizing only the nationwide child kidnapping alert network. President Bush has commended the House on

acting on legislation to help expand an Amber Alert system across the nation. He says that he looks forward to signing a reconciled version of the bill. (Published news reports)

**

RESCUE RADIO: UK POLICE ASK HAMS TO HELP SOLVE ROAD MURDER

Police in Surrey are asking U-K hams and C-B operators to help solve a case of murder by road-rage. Just after midnight UTC, on Friday the 21st of March, a truck driver on the M3 motorway was driving northbound when someone threw an object at the cab of his vehicle. It smashed the windshield and hit the driver and fatally injuring him. He was able to bring the truck to a safe halt before loosing conciousness. He died at the scene.

Investigators belive that the object was thrown from a footbridge over the highway. They are asking any ham or C-B operator who was driving in the area that night to call in and let them know if they saw anything. Surrey Police say that any leads would be appreciated. (GB2RS)

**

RESCUE RADIO: HAMS HELP SAVE YOUNG BURN VICTIM IN HONDURAS

The ARRL Letter says that quick action on the part of a group of ham radio operators may have saved the life of an young burn victim in Honduras. The 8 year old girl was seriously burned late last month. Amateur Radio operators and volunteers at the International Health Service clinic in a remote village in southeastern Honduras and stateside hams worked together on the air to bring needed treatment to the child. With ham radio to coordinate the move, the youngster was evacuated by air to the nearest town with a hospital. From there she was taken to the capital city of Tegucigalpa, where the University of Honduras Medical Center has a burn trauma unit. (ARRL)

**

WELCOMING THE YOUNG: W9SM AT THE WAUSAU CHILDRENS FESTIVAL

The Wisconsin Valley Radio Association will be sponsoring a special event station W9SM, at the 30th Annual Children's Festival in Wausau, Wisconsin.

The date is Saturday April 5th. The Children's Festival features hands-on activities at numerous booths run by various community groups.

The special event station will operate between 1600 UTC and 2200 UTC on April 5th. This, in the General portions of the 10, 15, 20 or 40 meter bands both SSB and CW.

While in operation the station will demonstrate several aspects of amateur radio to the children attending, including APRS and High Frequecy operations. The kids who stop by will also have the

opportunity to get on the air.

The Festival is sponsored by the Children's Festival Committee and the Wausau and Marathon County Parks and the Recreation and Forestry Department. QSL via WB2TLQ at his callbook address. (WB2TLQ)

**

CONVENTIONS AND HAMFESTS: NAB HAM RADIO RECEPTION - APRIL 9

On the convention scene, the annual Amateur Radio Reception at the National Association of Broadcasters Convention is slated for 6 to 8 p.m. on Wednesday April 9th. The venue is the Hilton Hotel in Las Vegas Nevada, right next door to the famed Las Vegas Convention Center.

This years hosts are again CQ Magazine and Kenwood Communications. Publisher Dick Ross, K2MGA and Editor Rich Moseson, W2VU will be there representing CQ. Paul Middleton, K4NUH, will be on hand for Kenwood.

Between 800 to 1000 hams in the broadcast industry attend this yearly ham radio social get together. Among them will be top ARRL officials and some of the folks from Amateur Radio Newsline.

The National Association of Broadcasters Convention is one of the largest held each year in Las Vegas. It typically draws over 100,000 attendees. More information is on the web at www.nab.org/conventions/nab2003 (ARNewsline™)

HAMFESTS AND CONVENTIONS: GO SEE THE TV COMMERCIAL

Ever see a television commercial for a ham radio convention? Well the Rochester Hamfest has one and its now on-line so that you can see and hear it.

The commercial comes courtesy of the Rochester Hamfest. That show is slated for May 30th through June 1st at the Monroe County Fairgrounds in Rocheter New York.

To view or download the T-V spot go to www.rochesterhamfest.org. Then scroll down to the words "click here to see our new TV commerrcial."

And oh yes. A high speed connection is recommended. This is because it is a 5.9 Mega Byte file that opens in most recent media players

including Apple Quicktime and Real Player One. (Rochester Hamfest)

**

HAM RADIO IN SPACE: THE 2003 AMSAT-UK SPACE COLLOQUIUM

And the 18th AMSAT U-K Space Colloquium will be held from July 25th to the 27th at Surrey University, Guildford in Surrey England. This year speakers are a bit hard to find. So planners have relaxed the requirement for a printed paper to accompany the talk. AMSAT says that in 2003 this will not be mandatory.

Other changes this year include "Beginners' Sessions" on both Friday and Saturday afternoons and an earlier start of talks. These will begin right after lunch on Friday but alternate planned tours will be available all day.

Full information about the 2003 Colloquium is on the AMSAT-UK web site. You will find it in cyberspace at www.uk.amsat.org/colloquium.htm. (AMSAT-UK)

**

INTERNATIONAL - UK: CB RULES AND FREQUUENCIES TO CHANGE

On the international freont, look for some major changes to happen to 11 meter Citizens Radio in the United Kingdom over the next several years. This, as the result of the British equivlant of our Notice of Inquirey being issued by their Radiocommunications Agency on March 25th.

The Consultation Document -- as it is known -- contains a proposal to deregulate Citizens' Band radio in the United Kingdom and withdraw the 40 U-K only CB channels by 2010. It also proposes removing the need for individual licensing in 2004.

Not changed would be the current technical equipment requirements and the current operating rules. The deleted U-K only channels would be replaced by the 40 pan-European C-B channels. A press release from the U-K Radiocommunications Agency says that this deregulatory move is intended to provide easier access to C-B and to enhance enjoyment of the hobby. (GB2RS)

**

INTERNATIONAL - INDONESIA: WORLD-WIDE CB DIRECTORY

The Indonesian DX Club is inviting Citizen's Band operators around the world to register their callsigns for the IDXC's C-B Radio Callsign Directory. IDXC is the only one DX listeners club located in Indonesia, and regularly listed in the World Radio TV Handbook. To learn more about the club and register take your web browser www.idxc.org/callsign and explore a rather interesting spot in cyberspace. (IDXC)

**

AWARDS: GET YOUR SWL CERTIFICATE

Duane Fischer, W8DBF, says that the beautiful Hallicrafters Ccollectors International Short-Wave Achievement Certificate is still available. You get it for verified reception of 25, 50, 75, 100 or more countries. Proof of reception is not required as the award runs on the honor system. You can see a low resolution copy and get more information on line at the Hallicrafters Ccollectors International website. Irts in cyberspace at www.w9wze.org (W8DBF)

**

DX

In DX, word from KA2AEV that a group from the recently formed Antigua & Barbuda Radio Club will be traveling to their sister island of Barbuda April 18th to the 21st. Plans call for stations on 160 through 10 mters plus a 2 meter station for local contacts using the call sign V21BBQ. Organizers say that to their knowledge, there has never been any ham activity from Barbuda. In addition to racking up contacts the operators hope to expose the islands residents to the magic of the hobby while familiarizing the worlds ham community with Barbuda. QSL to the Antigua & Barbuda Radio Club, P.O. Box 965, St.John's, Antigua, West Indies. (KA2AEV)

Also, PS7AHR is the official station of The Brazilian Amateur Radio Historical Archive . According to Ronaldo Reis, PS7AB, this is an organization devoted to documenting and preserving the history of amateur radio in Brazil. If you happen to contact it, please QSL via the bureau or direct to P.O. Box 2021, Natal/RN, 59094-970, Brazil. More information, in Spanish and English, can be found on the web at www.ps7ab.com.br (PS7AB)

**

THAT FINAL "APRIL 1ST" ITEM: RADIO THAT CAN MAKE YOU SICK

And finally this week, it appears that some hams may be facing a new health threat ... especially if they eat while operating the radio. Roving correspondent Pierre Pullinmyleg is back from his self imposed exile and filed this report on Tuesday, April 1st:

--

For decades, wives of radio amateurs have said that ham radio makes them sick to their stomachs. Now, it seems that ham radio may actually DO that.

The French Office of Oohs and Lalas, or FOOL, has been studying reports of amateurs falling ill after eating while operating during certain band openings on 6 and 10 meters. Officials at FOOL have determined that the problem occurs only during periods of sporadic-E propagation and believe that the radio waves carry with them into the shack of ham some of the ionization from the E-layer of the ionosphere.

If food is present at the amateur's operating position, then the ions apparently interact with bacteria present in the food to cause food poisoning. The scientists have determined that this is a type of E-Coli contamination which they have named Sporadic-E-Coli, both because it occurs only sporadically and because it appears to be caused by sporadic-E radio signals. They recommend using audio filtration in order to "cleanse" the signals before they reach the speaker, which appears to be the major medium of transmission.

Reporting from the E-layer, this is Pierre Pullinmyleg for Newsline.

--

Pierre says that another option, of course, is to eat in the shack only during periods of F-layer propagation -- and then -- to only munch on chocolate F2 layer cake. (A Pierre Pullinmyleg Annual April 1st Exclusive Report)

Not exactly. People are aware they'll have to go through customs when traveling from country to country (a well publicized bit of information), but very few first time visitors to California realize they'll have to pass through an agricultural inspection station which impounds fruits and veggies illegally imported from other states.

Considering the present educational benefits, I'm not so sure about that, Larry. The present system is a partial matching funds system that requires small withholdings over many years of service, or significant chunks of monthly paychecks for those leaving after one enlistment, to gather enough money for a college education today. Of course, her new found fame will ease that burden considerably.

Don't take what they say too seriously, Bill. What would you say when talking to reporters with the armed soldiers from the military that just killed, and is killing, many thousands of your countrymen?

Everyone shouting about Saddam seems to forget that we're also killing many thousands of their men and women who joined their military simply to serve their country. Most know no more about WMD than our soldiers did during the Manhattan Project of the early 40's. In fact, I'm sure most don't even understand our reasons for invading their country - many Americans are not even certain of that (and even fewer around the world are).

>The class was not organized to teach amateur radio. I don't see how the
>application is relavant.

Because, Vippy, you keep ahrping upon how your "comm prof" didn't address certain topics in the class.

Obviously, if they didn't pertain to the course objectives, they weren't discussed. Did they happen to discuss Foley catheterization or central venous access in your "comm theory" class either?

>The class covered modulation schemes, including On-Off Keying. Therefore, one
>should be able to compare various modulation modes and know the
>advantages/disadvantages of each.

"On-off keying" pertains to many different modulation schemes, Vippy. Not just the relevence of Morse Code as it pertains to Amatuer Radio licensure.

>Prof J Weitzen. What purpose does that serve? I hope you don't email him or
>something. I hope I don't regret this.

Why should you? Is there something this person might have to say about you if we asked?

>>How can anyone make an informed, balanced presentation on ANY subject
>>without practical experience in the subject matter, Vipul?
>
>Sorry, but I cannot see your point. I believe Prof really knows the material.

Because, Vipul, we are discussing AMATEUR RADIO here...NOT electrical engineering, SINCGARS or professional broadcasting.

>Prof did not just read about it. Prof has practical experience. He's worked
>in
>industry.

Your frequent references to him are vis-a-vis what he said or DIDN'T say about Mose Code or Amateur Radio...The question was what experience does he have in AMATEUR RADIO...I could care less what he knows about commerical, military or engineering.

>He knows the math behind the tradeoffs. In terms of modulation schemes, he
>has
>knowledge of how some of the most advanced modulation schemes work, their

>mathmatical derrivation, applications, advantages, disadvantages

Great...then if he just adds in the few regulatory things that are specific to Amateur Radio, he can get a No Code Tech just like mere mortals.

>And you are saying he does not know where Morse code fits in?

The proper question is "Does he know where Morse Code fits in to AMATEUR RADIO?", Vipul. YOU are the one who dragged this poor soul into this.

>>It means you found a book title that you can quote without
>>having had any practical experience in the subject matter.
>
>Please find a source that gives praise to Morse code.

Who said anythign about "praise", Vippy?

>Now, why is Morse code so important that it is in between the General
>(written)
>test and required for HF.

BECAUSE IT'S THE LAW! United States regulations are written so as to embrace and meet international regulations that the United States is signatory to.

Morse Code is STILL the most basic and universally understood method of communications. I may not understand the frantic calls for assistance of a yacht skipper speaking Lower Slobovian, but I sure can understand "SOS SOS SOS DE ZZ3ZZ/MM QTH W136R52R10 N10R10R05 PSE K"

>It seems like a lot of people do what I'm talking about via APRS, but I'm not
>so sure about the autonomous station issue. Repeaters get their own licenses
>- what about weather stations?

Just FYI, Bill, but repeaters operate under the callsign of thier trustee...not a seperate license. That was once true, but not any longer.

As long as your station is operating on frequencies authorized for auxiliary or remote base (222mHz and above) and identifies as it shoud (once every 10 minutes) and does not otherwise cause harmful interference to other stations, I doubt that you'd be in any violation of Part 97.

>I've thought about going to Part 18 ISM rules instead with a 902 MHz
>line-of-sight link, but that's not a clear regulatory option, either.
>Neither is Part 15 (I don't want to have to certify compliance). I think it
>really is a HAM-related activity, but I don't understand the operations
>portion.

There's so little activity at 902mHz as far as Amateur Radio goes, that I still think that if yuo observe the basic rules-of-the-road, you'd not be in any violation.

More FYI, but under current bandplanning for the 33cm band, 904 to 906Mhz and 915 to 918MHz is reserved for "data" modes...certainly your TAPR-based telemetry would meet this criteria.

And last but not least...you might consider an e-mail to Riley Hollingsworth, the FCC's "enforcement" guru, and ask him the same question directly.

Please share your findings...I hang glide and would like to put a remote station at the launch site which is a considerable (read that as too far for Part 15!) distance from my home.

>Or, can one support the troops yet not support the war?

In this case, I'd say "no", Dwight. At least not if you openly protest the war.

Open protest of our government's actions when we are already at war gives aid and comfort to the enemy in as much as they can hope that if they "tough it out" they can perhaps prevail.

The longer they resist, the greater the potential for casualties on BOTH sides.

Disagree with the war if that's your opinion, certainly...but open protest is aid and comfort to the enemy.

Unless, of course, those open protests cause the US to end the war, in which case the number of casualties would be reduced. That's what most protesters against the war say they are trying to achieve. I happen to believe their assessment of the situation is faulty, but I don't see that as an intent on their part to not support the troops.

A more accurate term here is "rump" militia, Jon. There ARE legal and responsible militia organizations in the United States: CT has one, as does Tennessee, Texas, California, New York, Ohio and others.

Some of them are more social or ceremonial in nature, others have viable state-supported and mandated missions.

It's a shame that we allow cowards and murderers like Tim McViegh to steal away the good name of Americans who do volunteer to serve (in legal militias) in thier home states in this way.

One of the "lessons learned" from Vietnam and the Gulf War, Jon, was to
not commit troops to battle until you were certain that diplomacy ahd failed
and that you were commited to making sure you fought the battle to the end.

G. W. is not about to stop where he is and bring the troops home because
of a bunch of citizens who express their opinions about the war by blocking
busy business thoroughfares with illegal traffic stoppages and therefore
imposing thier own illegal economic sanctions on private businesses.

Again...HOW do you "support the troops" by making it harder for them to do
what they were sent to do? By "bringing them home" before they finish the
mission they were sent to do? That means we just threw the lives of the
Soldiers, Sailors, Airmen and Marines who died doing what their country asked
of them away.

The time for protest was over the last 12 years. Now it's time to get it
over with and done. THEN we can bring the troops home.

Yes, and there are many who feel that the Bush administration failed the first part of that test, having abandoned diplomacy before all avenues were exhausted.

> The time for protest was over the last 12 years. Now it's time to get
> it over with and done. THEN we can bring the troops home.

I agree with you, Steve. That's what I meant when I said that "I happen to believe their assessment of the situation is faulty." I'm simply saying that those who do disagree with you do not intend to be unsupportive of the troops. Fortunately, in this particular case, I don't think public protest in the US will make any difference in how Iraqis behave. Those who have been terrorizing their fellow Iraqis, and those they terrorize, are going to fight or run away irrespective of anything that happens in the streets of New York. In different circumstances, public protests might be a matter of more concern. And I do think that questioning the process by which we got into this war is valid, now and in the future.

We've lost over 100 good people so far, with more losses almost certain to come. If we don't continue to ask tough questions about whether their loss could have been avoided, I think we're doing our military people a disservice. History is rife with examples of wars begun for bad reasons. Acknowledging that doesn't detract one whit from the honor and gratitude we ought to show to those who fought in those wars. But we don't honor them by refusing to learn from our mistakes.

Usual anti-Morse Code, "morsemen", "no one knows better than me" stuff snipped. Nothing new there.

>>Pilots, the Coast Guard and the Military DO use Morse Code, Vipul.

>Private and Commercial aircraft pilots are NOT tested for morsemanship by the FAA or any other agency.

No one said they were, Your Idiotness. I said they use it.

>The US Military does NOT USE morse code for any sort of radio communications.

Yes, they do.

>US Military Intelligence does teach
>morse code cognition for interception of enemy communications
>as part of electronic intelligence gathering activities but it does
>NOT USE morse code skills for communications.

Yes, they do.

>>No nearly as prolificly as years ago, but they DO use it.

>The US Military DOES NOT USE MORSE CODE for radio communications.

Yes, they do.

>>I suggest that
>>you take any receiver capable of tuning below 500 kHz and tune slowly. Morse
>>Code signals abound.

>"Abound?!?" So does QRN and QRM.

>There are NO US amateur bands allocated below MF. None.

Where did I say there were, Your Scumminess? There is still maritime
Morse Code traffic in the MF bands. There is still maritime Morse Code traffic
throughout HF. It's there. It's real. Get over it.

>>Also tune from 108.0 to 118.0 MHz. Even more Morse code
>>signals.

>Oh, wow, the automatic ID keyer requirement means "morse
>is USED in air navigation?!?!?" No, no, no. That automatic
>keyer is there as a left-over requirement from 50+ years ago.

Yes, yes, yes. Morse Code, NOT packet, ASCII, voice, or any other mode is
used to ID those VOR's, etc. I never said HOW it was "encoded", I simply said
it is used.

>>Those are VOR's and VORTAC's use by civil and military pilots to
>>navigate by.

>Not quite.

"Not quite"...?!?! VORs and VORTAC'S are NOT used by civil and military
pilots to navigate by?

>VORs (Very high frequency Omnidirectional Ranges)
>and Localizer beams share that, interleaved on 0.1 MHz
>increments. Localizers are rather narrow azimuth beams for
>aircraft positioning to set up approach for landing. VOR was
>developed from the US Military TACAN (TACtical Area Navigation)
>and shares much of the technical basis of operation with TACAN.
>TACAN operates in low L-band microwave frequencies, not VHF.
>Decades ago the US Military and FAA cooperated on installing
>both TACAN and VOR on many ground stations and the combined
>equipment service was dubbed "VORTAC" (an acronym of
>acronyms).

...and not one word of this "disproves" anything I said.

>Only a fanatic morseman would think that "pilots use morse to
>navigate by."

I never said "pilots use morse to navigate by". I said pilot's use Morse
Code to identify the beacons that they DO navigate by.

(Ya shudda taken an extra English course or two in that 15 years of night
school, Your Scumminess)

>In actual practice there's absolutely NO need to
>use any sort of morse code if a pilot knows approximately where

>he/she is within several hundred miles.

Of course you KNOW this by years as a licensed and EXPERIENCED aviator, Lennie? Just like your years of licensure and experience in Amateur Radio, Lennie?

WHERE in the FAA database is YOUR name? Mine's there. Mine's also in the FCC database. I see you are absent from both.

>FAA has set up VORs
>such that there isn't any possibility of one VOR interfering with
>another by high-altitude aircraft.

VORs operate in the 108-118MHZ range and are succeptible to the same propagation anomalies that produce all sorts of bearing and "skip" errors that are known to Amateurs operating in the same general portion of the electromagnetic spectrum.

That was part of the reason for the development of TACAN, Lennie.

This INCLUDES occassional misnavigation due to tracking the wrong VOR due to propagational anomalies. An error avoided by ID'ing the right VOR...A point made to me by both my CFI and the Examiner I rode with. Neither were Amateurs, but made certain I knew to cross check the VOR ID by listening to it and making sure I had the right beacon.

>VOR receivers are crystal-controlled.

Not since the late 70's, Lennie. Where have YOU been? (Now Lennie is an Avionics expert! Whooiee!)

>Reception is line-of-sight. Relatively low-power VOR ground stations are either there or not there to aircraft. It
>is quite easy to determine which VOR is which without any need for "reading" the slow-speed morse automatic ID >keyer.

In most cases, this is reasonable. The pilot that doesn't make SURE, however, is an idiot looking for a place to have an accident.

>Since that keying is audio tone and carried on the "voice" mid-band of
>VORs, any ground station has the opportunity to use the voice
>part as supplementary control information...the keying would not
>be heard under such conditions.

More evidence of yet another LennieRant promulgated by an idiot with no practical experience in that which he rants about.

Please, Lennie, do tell us about your last cross-country flight as pilot in command while using VOR or VORTAC as your primary navigational aid...And DO tell us about being able to listen for remote-site FSS communications through that aid.

>VORs use 30 Hz AM...(SNIP)

Thanks for the technical spiel. Interesting, but not germane.

>VOR's inception dates to 1955 for the International Civil Aviation
>Organization, slightly earlier for the USA which developed the

So you ARE saying that Morse Code get's through, huh..??? That's a switch. You have very aggressively told us how Morse Code is NOT useful, utilitarian or reliable. But right here you say it IS reliable...AND in a radio service in which accuracy and reliability are not only paramount, but crucial to safety of life.

>Frequencies and general characteristics of US civil aviation
>radio service is found in Part 87, Title 47 CFR. Any local
>aviation publication store will have "sectional" charts from the

That's what I said, Your Plagerizingness.

>Civil aviation pilot license tests do NOT require morse code
>cognition "by ear" tests in the USA.

I never said it did.

Rest of LennieRant snipped and dismissed.

Screwed up again, Lennie. Ya tried to pass yourself off as "knowing" something from just reading about it, when what you did was make yourself completely stupid looking in the face of facts to the contrary.

As usual.

If you intend to respond and expect an answer from me, "CC" it. You ARE KF'ed.

Well, I wasn't necessarily talking about protests. However, since you brought it up, when does one protest a war one feels is wrong? After the war is over and the wrong is done? When does one protest an aspect of the war one disagrees with? For example, in the early stages of the Vietnam War (the war often cited by those opposed to protests), most supported the war. That support changed as that long war changed and expanded. Were people supposed to sit back in silence as the situation changed simply because the war had already begun?

I truly believe the best way to support our troops is to take our responsibilities under the Constitution seriously. That includes openly speaking out on the issues surrounding war - yes, even when that speech involves protest. I think it is irresponsible to elect people to extreme power with no challenge after that on the issues affecting us and our troops. Likewise, it is equally irresponsible to allow those people to send our troops off to war to kill and be killed without challenging those people on each and every aspect surrounding that war.

Our soldiers in the foxhole have little freedoms. During wartime, they depend on the people back home to keep the government and military in check. Their lives depend on it. I hope Americans never fail those soldiers by just sitting back in silence as the government and military does whatever they want with our men and women in the military.

If a healthy Democracy gives our opposition false hope, then so be it - they will eventually realize we are actually stronger because of it. That, not silence, is what makes America great, and powerful.

And South Carolina. However, there is nothing illegal about private, non-state sponsored, militia groups - many exist today, known by local, state, and federal law enforcement agencies. One exists right here in the next county, with several local law enforcement officers as members.

Also, as I understand it, Tim McViegh looked into militia membership but walked away when they didn't fit into his way of thinking. Am I wrong about that?

Understood. So the answer to my question:

'Did Papa Bush really "fail"?'

is a resounding "NO! - all of the GW1 coalition's goals were
accomplished."

Maybe - or maybe not. Point is, coalition troops are in Bagdad now, so
coulda/woulda/shoulda will soon become reality. What would be really
neat is if much of the occupation/rebuilding could be turned over to
the UN.

Thanks for the quotes, Jon.

One thing none of the above folks really foresaw was that the presence
of "infidel" foreign troops in Saudi Arabia would be a prime
recruitment tool and motivator for anti-US terrorism. Even though the
troops are there at the express request of the Saudi royal family, to
keep SH under control.

Latest news is that a cache of chemical drums testing positive for
nerve and blister agents has been discovered. Experts are on the way
to analyze the find. A dozen barrels doesn't sound like much until
somebody uses them in a city.

One can criticize Bush-I for not forseeing all of the consequences of the decision to stop the war. Of course, once you start damning people for not being clairvoyant the list of the damned gets a bit lengthy.

> Maybe - or maybe not. Point is, coalition troops are in Bagdad now, so

I agree, as long as there is a specific plan for evolving control of the country to the Iraqis themselves as soon as the country can be de-Baath'ed.

> Thanks for the quotes, Jon.

My pleasure.

Thanks for the heads up, Jon. I heard about this some time ago, but nothing was said about it after the initial reports (leaving most to wonder if it was ever going to happen). Anyway, as mentioned in the article, it is a tuition assistance program offered in addition to the current MGIB (the partial matching fund program I mentioned). It doesn't extend to those who have left the military, but does allow education during active duty while still leaving MGIB benefits intact for continued education after leaving the service. However, if tuition costs exceed the tuition assistance amount, money is borrowed from future MGIB benefits (reducing the amount of benefits available after leaving the service). Regardless, while not as nice as the old educational benefits, it is still a significant improvement over the current MGIB program alone. By combining the two (classes while on active duty with the remainder after leaving service), a soldier leaving with less time in service could afford enough college to get a degree. In fact, if might even be possible to complete a degree program while on active duty, especially for those who stay in long enough to accumulate enough funds under the MGIB and actually have enough time between work to attend classes.

Just answer the questions, Len. They're not a trap. Just simple,
direct questions about FCC rules and the database.

> Fund a personal DSL line or send me a CD-ROM with the full FCC
> amateur radio database on it and I might write a search program
> and totalization for any field of data...then present the totals in here
> free of charge.

Why on earth should I do any of that? You won't even answer the two
simple questions posed above.

Let's see - you want ME to present the FCC database to you, on my own
time and expense. When said database is provided, you might - just
might - put together some software and present your results. Or you
might not. The software, presuming it is actually written, might
function correctly, or it might not. The results might be correct, or
they might not.

And we're supposed to trust YOU on all of this. Right.

> I'm NOT going to limit searches to some pre-biased conclusion
> reaching. I'm NOT going to bias anything.

Uh huh. Sure. We're supposed to just take your word on that, right?
We're all supposed to ASSUME you're going to be completely impartial,
fair, and error-free, even though you don't admit errors pointed out
by those who don't agree with you.

Why should we trust you, Len, given your long record of behavior here?

Why should anyone trust you when you won't even answer two simple
questions?

> There's one problem and why I wrote "might" instead of "will"

Tsk, tsk, tsk. Poor baby - doesn't "the radio-electronics
professional" have access to a broadband connection?
;-);-);-);

> You continue to insist on biased
> sorting and statistical interpretations to fit your agenda.

More nonsense from Len Anderson. Just no other word for it.

Why not just answer the questions. Or are you too afraid of the
answers?
>
> No problem. Your requests are denied.

As expected. You're afraid of the answers to those two simple, direct
questions. Can't handle them.

Here are some truths you obviously can't handle:

- FCC has been renewing all Technician and Technician Plus licenses as
Technician for almost three years now.

- The increase in US amateur radio licenses from early 1991 (when the
Tech lost its code test) to April 2000 (restructuring) was within a
few percent of the increase in US amateur radio licenses for an equal
period preceding the 1991 removal of the code test from the Tech
license.

- After April 15, 2000, Novices who pass Element 2, and Technicians
who pass Element 1, show up in the FCC database as Technicians, even
though they are "coded" and have some HF privileges.

- The current FCC database shows over 250,000 Technician class
licenses issued to individuals. Of these, most have not passed any
code test. But to claim that ALL of them are "noncoded" is simply not
true. You and N0IMD have made that mistake here.

- The numbers I post here bimonthly do not come from AH0A or his
website. They are derived directly from the FCC database - but not by
me. I just repost them.

- The numbers I post here bimonthly list the current license classes
of the various licensees and keep Technician Pluses separate from
Technicians.

Just answer the questions, Len. Don't be afraid. The truth won't hurt
you.

> think that the US should eliminate evil everywhere?

One need not directly intervene everywhere to bring pressure
to bear on other evils. The Soviet Union fell on its own accord.
The biggest thing that evil regimes fear is a population that is
both educated and has direct access to free communications.
The lessons of Iraq can and will be shared without needing to
directly intervene everywhere.

Is there any reason
> other than practicalities that should check the US from attacking evil
> regimes wherever they exist?

Practicality is a very real limiting factor. Costs also are as measured
in terms of lives and dollars.

> And what are the characteristics of a regime
> that make it evil?

Jon, I'm disappointed you even have to ask. I have no doubt as
to being able to recognize evil for what it is and where it is.
If the judgement is in doubt, then discretion would indicate
it isn't bad enough. What is totally pathetic is the fact (IMHO)
that some of those that opposed us going to Iraq, opposed our
engagement because they didn't believe the SH Iraqi regime
was evil enough to warrant intervention.

> Those are the questions that makes a lot of people in the world nervous
> about the Bush administration's preemptive war doctrine.

And isn't it wonderful that you live in this country and that
you and others can freely express your doubts and opinions.

Many of those outside the borders of the US sure don't
have my respect after their shameful behavior in the UN.
As to considering other's opinions, I trust that is certainly
of major concern in evolving US world policy. Your
mileage may vary.

Cheers,
Bill K2UNK

The same thing the Germans said after the SS was keilled along with many
German regular army. There was NO organized or disorganized
post surrender disappointment or ongoing hostilities.

> Everyone shouting about Saddam seems to forget that we're also killing
> many thousands of their men and women who joined their military simply to
> serve their country.

Try a different news channel. Most of the Iraqi army were conscripted.
Even those that may have volunteered probably did so as the better
alternative to the plight of civilians in Iraq.

> Most know no more about WMD than our soldiers did
> during the Manhattan Project of the early 40's. In fact, I'm sure most
don't
> even understand our reasons for invading their country - many Americans

The fact that any American doesn't understand why is simply
an indication that whoever that person/persons are, they are
either dumber than a rock or they have NO access to media
coverage of the events leading to and the execution of the war
itself over the last 20 days.

No, Americans dispise California's culture because it is Unamerican.

I went to Jr and Sr Hi School there and left when I was 25. I spent another year in San Diego in 1978. Nothing had changed for the better. Police rightly arrested one of my subordinates for being drink, but then kept him in jail 3 working days before he even saw a magistrate. That doesn't happen in America. The S.D. police murdered nearly a dozen innocent citizens, this in addition to a few criminals. They're so trigger happy that two of them got into a gunfight over who'd drive! AFAIK, that doesn't *routinely* happen in America either. Not long ago I read that El Monte NARCs broke into a house in Compton and murdered an 80 year old man because a drug dealer had lived in the same house over 20 years before!! And guess what: Compton PD didn't arrest the killer! And what's really weird is that Californians *like* it that way. Cops gun down a jogger? Shouldn't have been running! Cops kill a man in his own back yard? Shouldn't have been out there cleaning his guns! Sorry dudes but that isn't America.

2046. FCC considers interference immunity for recievers.

We should all be encouraging this and commenting that manufacturers
SHOULD be required to design and market products that have a
specified resistance to interference (IMHO).

Bill K2UNK
----------see below:

From ARNewsline 1338 4/4/03:

RADIO RULES: FCC CONSIDERS INTERFERENCE IMMUNITY FOR RECIEVERS

We predicted a month ago that it would happen. Now comes word that the
FCC has issued a Notice of Inquiry, seeking comments on possibly
requiring receiver manufacturers to build in a certain level of
interference immunity. Bill Pasternak, WA6ITF, has more:

--
As noted on the CQ Magazine website and elsewhere in cyberspace,
amateurs have been frustrated for years by trying to explain to
neighbors that interference problems were really the result of poor
design. Bad engineering in their TVs, stereos, cordless phones and
other receivers.

Now, because of the need to protect Digital Television transmissions,
the FCC is seeking comments on the current immunity performance and
interference tolerance of existing receivers. Its also looking at the
possibilities for improving receiver immunity in the not to distant
future.

The FCC says that it is soliciting input from the public on possible
approaches to achieving desired levels of receiver immunity. This runs
the gammit from better product warning labels to the possibility of
implementing mandatory standards governing the manufacture, import and
sale of consumer electronics reception gear.

It is all in FCC E-T Docket 03-65. You will find it on the web by using
the document search engine at www.fcc.gov.

For the Amateur Radio Newsline, I'm Bill Pasternak, WA6ITF

I think you are describing an "automatically controlled digital
station". This is covered by 97.221. You are free to do this
at VHF and higher frequencies, as well as in selected portions of
the HF bands.

>My concerns: this is not a backyard affair attached to my personal

>here. It seems like a lot of people do what I'm talking about via APRS,
>but I'm not so sure about the autonomous station issue. Repeaters get
>their own licenses - what about weather stations?

Your personal callsign is fine. Callsigns no longer identify the
locations of stations or anything like that, but rather just tell
the FCC who to talk to if the station screws up. I suspect an arrangement
where you polled the data out of the station via an autoresponder
might be slightly better than broadcasting, all other things being equal.
You are responsible for having a way to shut down the station in a hurry
if it bothers someone, and having the station stay silent until polled
is an effective way to do that under normal circumstances.

>I've thought about going to Part 18 ISM rules instead with a 902 MHz

>Neither is Part 15 (I don't want to have to certify compliance). I
>think it really is a HAM-related activity, but I don't understand the
>operations portion.

Part 18 really isn't applicable, but Part 15 would probably work okay
if its constraints were compatible with your applicaton. Section 15.23
says:

15.23 Home-built devices.

(a) Equipment authorization is not required for devices that are not
marketed, are not constructed from a kit, and are built in quantities of
five or less for personal use.

(b) It is recognized that the individual builder of home-built
equipment may not possess the means to perform the measurements for
determining compliance with the regulations. In this case, the builder

is expected to employ good engineering practices to meet the specified technical standards to the greatest extent practicable. The provisions of Sec. 15.5 apply to this equipment.

If you assembling the equipment yourself it need not be FCC-authorized, you just need to do your best to build the equipment in a way which complies with the technical constraints of some section in Part 15 (just the way you'll need to build it to conform to Part 97 if you operate under amateur regulations instead).

Since some of the best Part 15 frequencies overlap amateur bands, however, and since the modes available under Part 15 are usually also legal under Part 97, it would probably still be appropriate to identify with your callsign regardless given that it might help someone find you if the station screws up. If the equipment technically complies with the requirements of both Parts, the somewhat academic discussion of which Part it was actually operating under can probably be left for the very unlikely event that you need to talk to the FCC about it.

I think that the first issue here is that we should stop that spammer from posting his drivel in this newsgroup where it shouldn't be and get him to post it in "rec.radio.info" where it was approved to be back in 1996 (or so) and is supposed to be.

Only when he does things correctly will it be worth anyone's time to listen. However, you should note on how many things he has reported on incorrectly in the past as well. Based on my knowledge of his stories, he's no better than the National Enquirer as compared against the New York Times.

In academia, it is "publish or perish". The professors will NOT use any material outside that written by colleagues unless that is the only choice. The quality or ease of understanding the material is irrelevant to the professors. They are contributing to each other's financial welfare and that is the basis on which they select text books. This has been going on ever since there were universities. To think otherwise is incredibly naive.

I've many reference books that I bought in my field because the college texts were next to impossible to understand. Why didn't the professors use these better books? They knew about them and they also knew that neither they nor other college professors authored them.

By the way, TURN ON YOUR SPELL CHECKER.

> in terms of lives and dollars.

So it's okay to NOT intervene against evil if it's going to cost you. But is that the ONLY limiting factor? Is it utterly unimportant if some people disagree that the attack is justified? How about if a LOT of people disagree? How about if everybody except Bill Sohl disagrees with you? At what point do you begin to say to yourself, "hmmm, maybe I should take their views into account"?

>> And what are the characteristics of a regime that make it evil?
>
> Jon, I'm disappointed you even have to ask. I have no doubt as to being
> able to recognize evil for what it is and where it is.

That's nice. What is the evil-versus-cost balancing point, Bill? How do you measure the evil of a regime and balance that against the costs of eliminating it to make the decision whether to attempt to destroy the regime by force or to destroy it by more peaceful, albeit slower, means? Is there a universal equation that answers all such questions? Or do you believe that the answers are necessarily going to be determined in part by one's experiences, values and culture?

> If the judgement is in doubt, then discretion would indicate it isn't
> bad enough. What is totally pathetic is the fact (IMHO) that some of
> those that opposed us going to Iraq, opposed our engagement because they

As did the Bush administration, or so they said. This was presented as a case of elimination of WMD, remember. The Administration said they would be satisifed if Iraq openly and completely complied with the UNSC demand to eliminate its weapons of mass destruction -- no elimination of the SH regime required. You're not suggesting that the Administration was lying, are you?

As for those who opposed force, maybe they thought the costs were too high. One can disagree with that, but it's not a black-and-white issue. I

find it troubling that people on both sides of this question quickly retreat to simplistic moralizing. If you're against the war you're in favor of an evil regime; if you're for the war you're willing to slaughter the innocent for oil. Neither position characterizes the opposing point of view at all. Both are attempts to win an argument rather than to reach consensus. (Well, duh, Jon, welcome to RRAP!)

>> Those are the questions that makes a lot of people in the world nervous
>> about the Bush administration's preemptive war doctrine.

Yep. Sure is. I wish everyone could. What costs are you willing to bear to ensure that the folks in North Korea can, for example? (I'm guessing you're not in favor of attacking them.)

> Many of those outside the borders of the US sure don't have my respect

It would be nice to think that we'd improve those benefits, especially considering the present sterling service being demonstrated by our armed forces. But the plain truth is, it's not in the best interests of the services to make it possible to receive all of the educational benefits you need by serving only one hitch.

>the war.

I disagree! Freedom of speech demands that those who oppose the war, on whatever grounds, be allowed to have their say, as long as they do not reveal military secrets, damage property, or restrict the rights of others (say, by illegally blocking traffic). Being against a government policy does not mean someone is against those who have to carry out that policy. For example, disagreement with the old 55 mph speed limit does not mean someone hates police officers.

During the Vietnam era, some anti-war folks made the stupid Jane Fonda-esque mistake of verbally attacking the troops themselves rather than opposing the policies of those who gave the orders those troops were sworn to carry out. Calling a returning soldier a babykiller won't stop a war.
>

>protest is aid and comfort to the enemy.

Just the opposite, Steve. Open expression of political opinion isn't just a right, it's a duty. It shows the other side that America lives by what it preaches.

One doesn't have to go down the "don't protest during wartime" policy very far before the argument can be made to suspend national elections during wartime.

After all, if someone runs against the incumbent president, they oppose his policies and disagree with his decisions - by definition. And "wartime" covers a lot of ground - how long did the Cold War last?

Or consider this thought experiment:

Suppose President Bush announced that he wants to create a new $1/gallon federal tax on retail sales of gasoline. Suppose he says the money from this new tax would go to pay for the war, fight terrorism, and reduce America's dependence on imported oil. Suppose he further announces that govt. agencies and certain key industries would be exempt from the tax, but everyone else would have to pay it. $1 per gallon of gasoline - other fuels exempt.

Most of all, suppose he said "the country needs this tax as part of the war effort".

How do you think people would react?

Would anyone who spoke against this hypothetical new tax be giving aid and comfort to the enemy?

Yes, Ryan, there IS a technical difference.

However, for decades, the two-letter "CW" has been a colloquial
term for any on-off keying code of a continuous wave RF carrier.

You have pulled out a very old Troll subject in here.

You know better than this. :-)

>local Army-Navy Surplus can find us one...?!?!

SINCGARS (SINgle Channel Ground Air Radio System) is the basic small-unit radio of the US military for ground-ground and ground-air operations and has been operational in the US Army, USAF, and USMC since 1989.

As of 2002, both ITT Fort Wayne, IN, and General Dynamics Land Division, Fort Lauderdale, FL, have built 240,000 radios for the US military. ITT Fort Wayne is still in production of the "SIP" (Sincgars ImProvement) units. Final production finish will result in over a quarter million radio units.

No doubt those will eventually turn up in electronic surplus markets. However, the basic design and performance is so good that this will not be something taking place in the near future.

SINCGARS operates over 30 to 88 MHz with selectable clear-channel voice and data or frequency-hopping spread spectrum mode with built-in communications security of the digitized voice. The basic radio unit can be manpack (lithium-ion battery internal), vehicular or aircraft mounted

with or without a power amplifier add-on (using vehicular electrical power). In the FHSS mode using COMMSEC it is both jamming-proof and has no known evidence of decoded communication security codes. Those radios are presently with the coalition forces in Iraq.

Can't handle it, ey? :-)

> But once again, Lennie the Lame tries to push off his bullying, arrogant
>"knowledge" against practical experience and facts. And once again the
>Licenseless One flops on his face.

Tsk, tsk, tsk. I do have a radio license. :-)

Not only do I have knowledge and experience but so do thousands
of other radio professionals, some of whom might be amateurs as
well.

Robeson is not a professional in radio or electronics.

At best he was just a purchasing agent for less than a year.
Purchasing agents pursue paperwork, not electronics.

> Usual anti-Morse Code, "morsemen", "no one knows better than me" stuff
>snipped. Nothing new there.

Robeson cannot admit ignorance of the wider field of radio beyond
amateur radio.

Admitting ignorance will cause him lack of self-esteem. Can't have
that, can he? :-)

>>>Pilots, the Coast Guard and the Military DO use Morse Code, Vipul.
>
>>Private and Commercial aircraft pilots are NOT tested for morsemanship by
>>the FAA or any other agency.
>
> No one said they were, Your Idiotness. I said they use it.

You "said" wrong.

The only on-off keying codes used by the USCG are for blinker
light signalling. USN too. Light frequency is above the 300 GHz
allocation limit of all radio regulation agencies.

>>The US Military does NOT USE morse code for any sort of radio
>communications.

>
> Yes, they do.

Nope. Voice and data, facsimile, video is the extent of it.

>>US Military Intelligence does teach

>
> Yes, yes, yes. Morse Code, NOT packet, ASCII, voice, or any other mode
is
>used to ID those VOR's, etc. I never said HOW it was "encoded", I simply said
>it is used.

Pilots do NOT use it...unless they are morse-fanatic amateurs.

Pilots do NOT HAVE TO USE IT. It's that simple. If they know
their position within about 200 NM, they simply pull out their
sectionals, consult the VOR frequencies on the map, dial it up
and they will have the VOR. A quick eyeball of the sectional
will let them know approximately where they are...triangulation
of at least one other station via the OBS and they will be quite
close.

Note: Pilots can also use the en-route charts if they wish, showing
a wider area. For more precise civil air navigation, the frequency-

aligned DME (if there is one) will present range while the VOR shows
azimuth (relative to magnetic north, local). Sectionals are more
common maps in civil general aviation.

NO morse code identification is used with ATC Transponders.
Those will reply in Octal coding for ID and altitude (if a coded
sealed altitude unit is connected). Ground stations do not ID
their ATC Iterrogators but do use double-pulse spacings to
indicate mode (civil or military) and desired ID or altitude request.
Octal code is 3 bits in a 1-2-4 binary weighting.

>>>Those are VOR's and VORTAC's use by civil and military pilots to
>>>navigate by.
>
>>Not quite.
>
> "Not quite"...?!?! VORs and VORTAC'S are NOT used by civil and military
>pilots to navigate by?

Watch your sentence structure.

Few civil aircraft are equipped with TACAN. A "VORTAC" is a VOR
with a TACAN alongside in a ground station. A DME is usually
coincident in that ground station. TACAN is for military aircraft flying
civil airways and provides both azimuthal bearing and distance to
the ground station. TACAN ground stations are NOT morse code
IDed and, like DME, operate solely in low L-band..

> ...and not one word of this "disproves" anything I said.
>
>>Only a fanatic morseman would think that "pilots use morse to
>>navigate by."

Watch your English sentence structure or you will be admonished
for not being able to use English as a native language.

Robeson displays such an abysmal lack of modern (in the last 48
years) civil aircraft radionavigation that a mini-tutorial on basic
radionav had to be given by myself.

> I never said "pilots use morse to navigate by". I said pilot's use Morse
>Code to identify the beacons that they DO navigate by.

Very, very few do. Pilots DO NOT HAVE TO LISTEN FOR ID in
US general aviation flying-navigating.

> (Ya shudda taken an extra English course or two in that 15 years of
>night school, Your Scumminess)

Robeson's writing doesn't indicate that English language is
familiar to him...he could use some Remedial English
Writing classes to bring him up to high school level.

As another suggested, a Dale Carnegie class would be helpful
in trying to get along with others. Robeson has much difficulty
in getting along with others who have different opinions.

>>In actual practice there's absolutely NO need to
>>use any sort of morse code if a pilot knows approximately where
>>he/she is within several hundred miles.
>
> Of course you KNOW this by years as a licensed and EXPERIENCED aviator,
>Lennie? Just like your years of licensure and experience in Amateur Radio,
>Lennie?

The "within 200 NM" unofficial rule is taught in ground schools
and known (almost, but not quite, instinctively) to experienced
general aviation pilots who've used sectionals and VORs for
air navigation. It is fairly simple. When airborne, the LOS is
quite long, free of obstructions for VHF through L-band. Ground
station output power is sufficient to insure a good, stable signal
out to 200 NM. Not a problem.

Ground station frequency assignments have long since been
made to insure that there will be no interference from other
ground stations.

> WHERE in the FAA database is YOUR name? Mine's there. Mine's also in
>the FCC database. I see you are absent from both.

No aviation license is required to learn, experience, and know air
radionavigation...not even for celestial navigation.

I've had several years of experience in the design of civil and
military avionics, especially so in regards to aircraft radio-
navigation systems, methods, techniques, and standards.

Does the acronym ARINC mean anything to Robeson?

>>FAA has set up VORs
>>such that there isn't any possibility of one VOR interfering with
> >another by high-altitude aircraft.
>
> VORs operate in the 108-118MHZ range and are succeptible to the same
>propagation anomalies that produce all sorts of bearing and "skip" errors that
>are known to Amateurs operating in the same general portion of the
>electromagnetic spectrum.

Robeson is talking through the hat on his balding head.

Mid-VHF propagation characteristics were known when the
ICAO standards were adopted for worldwide civil aviation in
the mid-1950s. There's been almost a half century to show
any anamolies of these alleged "bearing errors" and "skip
errors" (presumably meaning interference from other ground
stations). None of those have shown up.

Bearing errors on VORs are a result of the ground station
installation, not from "propagation disturbances." Those are
correctible and most ground station equipment suppliers
have such correction kits.

Robeson is invited to peruse any group of sectionals or en-
route charts to show the slightest possibility of his alleged
"skip errors." The maximum slant range at LOS is easily
computed from simple geometric trigonometry and is a
function of altitude. With absolutely no, repeat NO, terrain
masking when at altitude, the received VOR signal will be
at a maximum.

> That was part of the reason for the development of TACAN, Lennie.

TACAN was developed first in a USN contract with ITT. It came
to be before DME and VOR.

DME (Distance Measuring Equipment) uses the same essentials
as the slant range measurement in TACAN. DME and TACAN
are usually provided by the same ground station.

VOR is a VHF compromise in design, generally based on the
TACAN "rotating beam" of AM for the basic ground station
bearing azimuth. Where VOR differs is in the reference phase
for the rotating beam, VOR using a 9.96 KHz sub-carrier with
the 30 Hz reference phase FMing the sub-carrier.

VOR is really an elegant system for a simple airborne receiver
based on vacuum tubes (it was developed in the early 1950s).
The VOR reference phase is easily separated despite a 30%
AM rotating beam and the refernce phase FM does not impact
the azimuth bearing AM. Any inaccuracies in a VOR receiver
are due to its internal design and calibration.

There CAN be some minor azimuthal errors due to shadowing
of the aircraft structure at certain look-angles but those are
minor and can be found through ordinary antenna range tests
on models. Such aircraft errors are individual to the aircraft
and not a part of the VOR system.

> This INCLUDES occassional misnavigation due to tracking the wrong VOR
>due to propagational anomalies.

Pilot or navigator error is not part of the system.

Robeson can look at any group of sectionals or en-route charts
and note the ground station frequencies of VORs. He can then
(with all those alleged years of navigation experience) note the
range separation...far enough that "skip" (rare at VHF) will not
be a factor in any "errors."

If Robeson finds some anamoly, his DUTY to country and "fellow
pilots" should be to contact the FAA immediately and report that
badness.

>An error avoided by ID'ing the right VOR...A point
>made to me by both my CFI and the Examiner I rode with. Neither were
>Amateurs,
>but made certain I knew to cross check the VOR ID by listening to it and
>making sure I had the right beacon.

You were obviously noted to be an LPN at the time, therefore
you were brought up to speed on basic basics...if we can
believe you. [few of us can]

>>VOR receivers are crystal-controlled.
>
> Not since the late 70's, Lennie. Where have YOU been? (Now Lennie is
>an Avionics expert! Whooiee!)

I have much more technical knowledge on civil air avionics than
Robeson.

The very first VOR receivers were manually-tuned. This gave way
to the two-LO-matrix crystal switching of double-superheterodyne
architecture to minimize the total number of quartz crystals. That
was in the late 1950s with the 1960s marking one of the first uses
of DC-biased silicon diodes to replace the switch contacts in the
same bank/matrix of quartz crystals. By the 1970s there was the
introduction of the PLL in VOR receivers to reduce the number of
quartz crystals (in the receiver proper) to one. OBS circuitry may
have a separate crystal for timing of the microprocessor.

>>Since that keying is audio tone and carried on the "voice" mid-band of
>>VORs, any ground station has the opportunity to use the voice
>>part as supplementary control information...the keying would not
>>be heard under such conditions.
>
> More evidence of yet another LennieRant promulgated by an idiot with no
>practical experience in that which he rants about.

FAA has many VORs arranged so that a local tower or TRACON
can use the "mid-band" audio as another voice link to any
aircraft. In such an arrangement, switching to local voice to the
aircraft removes the automatic keying ID tone while the switch-
over is in effect. In such a case there is NO need to "ID" since
the listening aircraft has ALREADY located itself and knows who
and where the ground station is relative to aircraft's position.

This supplementary link to an aircraft is a valuable courtesy
extended to busy pilots, quite useful if the pilot is in an
emergency or near-emergency situation. As has been the
case at BUR, the Burbank (Burbank-Glendale-Pasadena
Airport, formerly Lockheed Air Terminal) local weather has
been on a recorded loop over the local VOR using voice for
weather and additional information (usually the tape loop ends
with "advise Burbank tower you have received Information
Delta <or whatever the alphabetic-sequence the loop has

currently>).

> Please, Lennie, do tell us about your last cross-country flight as pilot
>in command while using VOR or VORTAC as your primary navigational aid...And
>DO tell us about being able to listen for remote-site FSS communications
through
>that aid.

I've not used TACAN in a civil aviation craft, only the VOR, DME,
Localizer, Glideslope, Marker Beacon, and ATC Transponder.
I've used TACAN on military aircraft along with the expanded
(Mode 4) Transponder fully set for the IFF code of the day.

At all times sectionals or their military equivalent were available
for identifying ground stations without any reference to morse
code IDs. None was necessary.

> So you ARE saying that Morse Code get's through, huh..??? That's a
switch.
> You have very aggressively told us how Morse Code is NOT useful, utilitarian
>or reliable. But right here you say it IS reliable...AND in a radio service
>in which accuracy and reliability are not only paramount, but crucial to
safety
>of life.

I've NOT said anything about "morse code getting through."

I've explained the optional voice patch-through the FAA has
available. When such voice supplementary communications
is done, the voice displaces the automatic ID keying tone.

> Screwed up again, Lennie. Ya tried to pass yourself off as "knowing"
>something from just reading about it, when what you did was make yourself
>completely stupid looking in the face of facts to the contrary.
>
> As usual.

Poor baby. Still having a hard time "playing wth others?" :-)

Get some mental help, Robeson. You need it badly.

You are outclassed and outgunned on technical knowledge of
the civil aircraft radionavigation systems you brag about as an
alleged "expert" on them. Sad case.

> If you intend to respond and expect an answer from me, "CC" it. You ARE
>KF'ed.
>
>Steve
>Steven J Robeson, LPN

Poor baby. Does "LPN" stand for "Low Power Nitwit?"

How does one "ahrp" about anything?

> Obviously, if they didn't pertain to the course objectives, they weren't
>discussed. Did they happen to discuss Foley catheterization or central
>venous access in your "comm theory" class either?

Communications theory does not yet involve medical care
theory about "catherization" or "venous access."

It MIGHT be about "venous access" if one has to mainline the
CW drug to stay high on morse code... :-)

Does Robeson wish to talk about Foley Stages? No problem
with me on Foley Stages. Those are used every day out here.
One of my neighbors knows even more about Foley Stages
since he works with them. Those only involve audio electronics,
though, not "comm theory."

How is "catherization" or "venous access" involved in amateur
radio?

> "On-off keying" pertains to many different modulation schemes, Vippy.
>Not just the relevence of Morse Code as it pertains to Amatuer Radio
licensure.

Tsk, tsk, tsk, not only does everyone have to know how to "ahrp"
but now Robeson wants to call hams as "amatuers" again.

Bad form, OM.

>>>How can anyone make an informed, balanced presentation on ANY subject
>>>without practical experience in the subject matter, Vipul?
>>
>>Sorry, but I cannot see your point. I believe Prof really knows the

>material.
>
> Because, Vipul, we are discussing AMATEUR RADIO here...NOT electrical
>engineering, SINCGARS or professional broadcasting.

Tsk, tsk, tsk...FCC does not require ANY staff or commissioners
to have "amatuer licensure" in order to REGULATE US amateur
radio.

Shah did not mention SINCGARS at all. I did. Try to stay with
the program. Tsk, tsk, tsk.

> Your frequent references to him are vis-a-vis what he said or DIDN'T say
>about Mose Code or Amateur Radio...The question was what experience does he
>have in AMATEUR RADIO...I could care less what he knows about commerical,
>military or engineering.

Tsk, tsk, tsk. Robeson "doesn't care" about anything except what
he says. In debate that would call for the comment "bad form, OM."

> The proper question is "Does he know where Morse Code fits in to AMATEUR
>RADIO?", Vipul. YOU are the one who dragged this poor soul into this.

Tsk, tsk, tsk. The aggressor member of the Gang of Four insists
on the narrow, tunnel-vision focus to amateur radio...then tried
to interject "catherization" and "venous access" as pertinent to
amateur radio. :-)

> BECAUSE IT'S THE LAW! United States regulations are written so as to
>embrace and meet international regulations that the United States is
>signatory to.

Heah come de raddio kop...heah come de raddio kop! :-)

Robeson's "knowledge" of FCC regulation origins is as faulty as
his thinking that "catherization" and "venous access" are
necessary subjects for amateur radio policy... :-)

> Morse Code is STILL the most basic and universally understood method of
>communications.

SETI doesn't think it is "universal." SETI has been analyzing
the hydrogen line at 1.4 GHz for years, doesn't bother searching
the Universe for morse code signals. :-)

Terrestrially, Robeson is off the deep end due to ignorance.

1. There are approximately 50 to 100 million cellular telephones
in the USA alone. That number far out-does all the morse
code transmitters ever made worldwide; there are
approximately 300 million cellular telephones in the world.
No cell phone uses morse code for communications.

2. The number of non-morse-code PLMRS radios of all kinds
is well over a half million in the USA...NOT counting CB,

R/C, FRS, or GMRS radios (which don't use morse code,
either).

3. See below...

>I may not understand the frantic calls for assistance of a
>yacht skipper speaking Lower Slobovian, but I sure can understand "SOS SOS
>SOS DE ZZ3ZZ/MM QTH W136R52R10 N10R10R05 PSE K"

Robeson must think that GMDSS hasn't been activated or that
every maritime vessel isn't required to have a morse operator.

The Global Marine Distress and Safety System...enacted first
by the maritime community...doesn't use morse code or
require a morseman to operate.

The USCG has ceased monitoring the old 500 KHz international
distress frequency as have many other nations.

Evidently Robeson has the fantasy picture of radio amateurs
"keeping watch" on maritime frequencies (which are not in the
HF ham bands) in order to save lives at sea. Pity that. Not.

The aggessor-antagonist of the Gang of Four keeps on with
his foolishness and role-playing of the raddio kop in here. :-)

>
>Why on earth should I do any of that? You won't even answer the two
>simple questions posed above.

Tsk, tsk, tsk. In order to "answer" your pre-biased "questions,"
the request must be honored.

You've gotten into a habit of asking "do-you-still-beat-your-wife"
questions. Bad form, OM.

>Let's see - you want ME to present the FCC database to you, on my own
>time and expense. When said database is provided, you might - just
>might - put together some software and present your results. Or you
>might not. The software, presuming it is actually written, might
>function correctly, or it might not. The results might be correct, or

>they might not.

Mr. N2EY won't honor a damn thing anyone does that puts the
least negative aspect to morse code. Everyone in here knows
that. Every single comment anyone else makes about morse
code that isn't something positive is called "faulty," "a mistake,"
"in error" or similar.

>And we're supposed to trust YOU on all of this. Right.

Why not? Arthur B. Andersen Company did ARRL's federal
income tax. :-)

>> I'm NOT going to limit searches to some pre-biased conclusion
>> reaching. I'm NOT going to bias anything.
>
>Uh huh. Sure. We're supposed to just take your word on that, right?
>We're all supposed to ASSUME you're going to be completely impartial,
>fair, and error-free, even though you don't admit errors pointed out
>by those who don't agree with you.

I won't admit to "errors" that are not errors.

Why do you pre-bias questions in favor of morse code?

Are you the ARRL?

Why is everyone supposed to trust you?

>Why should we trust you, Len, given your long record of behavior here?

Poor baby. Mr. N2EY thinks this newsgroup is for the promotion
of morse code...any deviation from that is "bad behavior?"

Just honor the request I made and I might answer your question.

If you don't honor it then you are considered dishonorable.

>Why should anyone trust you when you won't even answer two simple
>questions?

I don't beat my wife. Ask an unbiased question and you might
get an answer.

>> You can't handle the truth.
>
>Just answer the questions, Len.

Sorry, you won't honor any answers. As far as unbiased debate
is concerned your actions in regard to morse code in here are
considered dishonorable.

>Tsk, tsk, tsk. Poor baby - doesn't "the radio-electronics
>professional" have access to a broadband connection?

No.

>;-)

Juvenile "comment."

Try some maturity. It won't hurt. Search ARRL for some maturity,
I'm sure they will claim that they know what is good for you. You
will have to pay shipping charges if ordered from Newington.

>Here's a hint: Start the download just before bedtime and let it run
>while you sleep.

Here's a hint: Supply my request and you might get an answer.

It won't do any good since you are dishonorable in public debate.

Any answer not favoring morse code will be remarked as "faulty,"
"in error," a "mistake" or other pejorative comments.

You are dishonorable in public debate on the subject of morse
code. It is as simple as that.

>> DSL service makes it reasonable.
>
>So sign up. Do you want a welfare handout from me?

Don't need it. Honor my request or be considered dishonorable.

>So go ahead and do it. Fortran is obsolete, btw.

FORTRAN is considered obsolete by "with-it" C++ programmers.
:-)

Nonetheless, there are thousands of FORTRAN programs out
there being used every day worldwide. :-)

I have four FORTRAN-written programs out on the freeware
net distribution for circuit design. They still work fine and
give correct answers.

>> Database file size is not
>> a problem here...I have a 40 GB hard disk with 34 GB free. :-)
>
>Lots of empty space, huh?

Tsk, tsk, tsk, still being antagonistic, aren't you? You keep
wandering off on misdirections all the time. Bad form, OM.

>Just answer the two questions.

"Do you still beat your wife?" :-)

three in the Gang of Four.

>> The end result in here was:
>>

>> You can't handle the truth.
>
>Nonsense.

You can't handle the truth about morse code. That is evident.

>The charade is that you won't answer them. Why not? Afraid of the
>answers? Afraid of the truth?

Not at all. You won't accept the truth on morse code. You are
afraid.

>> You continue to insist on biased
>> sorting and statistical interpretations to fit your agenda.
>
>More nonsense from Len Anderson. Just no other word for it.

Tsk, tsk, tsk...your questions are still biased.

No other word for it.

>Why not just answer the questions. Or are you too afraid of the
>answers?
>>
>> No problem. Your requests are denied.
>
>As expected. You're afraid of the answers to those two simple, direct
>questions. Can't handle them.

I still don't beat my wife. :-)

>Here are some truths you obviously can't handle:

I've handled them no problem.

You MUST misdirect by using those since the bias you use is
in favor of morse code.

You've biased those additional questions to fit your agenda of
promoting your personal interest in morse code.

You've never admitted that the NO-CODE Technician class
licenses kept the total US ARS license numbers from shrinking.

That truth is out there. You won't acknowledge it.

Ergo, you are dishonorable in debate about morse code.

>Just answer the questions, Len. Don't be afraid. The truth won't hurt
>you.

I've lost interest in this farcical "debate" over morse code.

Mr. N2EY is a PCTA and a member of the Gang of Four.

Was Kelly there with first-hand accounts of the "action?"

Was he catapulted over to 'Nam to shoot bears?

Was he on a super-secret mission to extract Marlon Brando
so he could star in a motion picture made by Coppola?

What is Kelly's experience with Special Forces?

Polish.

Is that a "rhetorical" question?

> Everyone shouting about Saddam seems to forget that we're also killing
>many thousands of their men and women who joined their military simply to
>serve their country.

The primary mission of the US military is "to close with, and
destroy the enemy."

>Most know no more about WMD than our soldiers did
>during the Manhattan Project of the early 40's.

This time frame isn't the "early 1940s." It is 60 years later.

>In fact, I'm sure most don't
>even understand our reasons for invading their country - many Americans are
>not even certain of that (and even fewer around the world are).

Pacifists want to sit back and do nothing. That is "safe."
They feel secure doing nothing. By doing nothing they
will not be responsible for any nasty action.

Now why don't you tell us all about the 1940s and the super
secret Manhattan Project? You had direct exposure to that,
didn't you? I was alive then and in grade school. I can't
remember any teachers mentioning the Manhattan Project
in grade school. We did find out more after 1945. Quite a
bit, in fact.

Do you think that the Daschle Chicks are patriots? If so, why?

I was a member of the military and most of us considered ourselves
patriots. Was that bad?

Thanks, Jon. You said well what I would probably have fumbled around with.
Bill, my sentiments follow those expressed in Jon's post; however, please
understand they aren't stated to incite anger. They are stated as true
fears for what will happen next, *if* anything will. Note that I have
emphasized the "if" in order to dispel your fears that I sound so much like

the anti-war groupies. Not that I think that is a bad thing...I am, for the most part, an anti-war person and I don't think that is a bad thing. I think it is a bad thing to overreact on either side of the fence, though.

I absolutely support our troops, their efforts and their dedication.
However, I do not support the President's decision nor am I sure I support
the war or not. So in my opinion yes, one can be done without the other. I
have just seen a tidbit of news (didn't get the story yet--only got the
headline) about some possibility that chemical weapons capability was
discovered today. Thank goodness it was discovered and not used!

There's a financial limit to everything.

> But
> is that the ONLY limiting factor?

Financial costs and lives are at least two elements.

> Is it utterly unimportant if some people
> disagree that the attack is justified?

It is to me.

> How about if a LOT of people disagree?

As measured in what terms? 1% of USA population is 2 million
people at least. 1% is minimal in percentage terms...others
would say one million people is a lot.

> How about if everybody except Bill Sohl disagrees with you?

If everyone but me disagrees, I surely doubt my position
or opinion would win out.

> At what point do you begin to say to yourself, "hmmm,
> maybe I should take their views into account"?

I don't have to care at all as to other's opinions since I'm not
the one making the decisions.

Iraq never openly and completely complied.

> As for those who opposed force, maybe they thought the costs were too
> high. One can disagree with that, but it's not a black-and-white issue.

It's pretty much a B & W issue in my book...which is an
opinion I'm entitled to.

> I find it troubling that people on both sides of this question quickly

> consensus. (Well, duh, Jon, welcome to RRAP!)

There already is a consensus. Over 70% support the war.
I find it ironic that because the minority opinion (i.e. protestors)
say they are protesting because no one is listening. Well "duh"
if the protestors only represent a minority opinion, then it
seems to me the elected officials ARE following public
opinion.

> >> Those are the questions that makes a lot of people in the world nervous

Does that make it any better, Bill? They joined the military, whether enlisted or drafted. Neither changes their understanding of why their country is being invaded, their knowledge of WMD, or their desire to defend their country. Nor does either change the fact that many are not out cheering our invading Army right now - they're home crying over the loss of a son, daughter, husband, wife, mother or father. War is ugly. The government, military, and press, are working hard to make sure Americans never see that ugliness. If we're going to scream for war, then we should also have the balls to honestly look at the results.

> The fact that any American doesn't understand why
> is simply an indication that whoever that person/
> persons are, they are either dumber than a rock or

> over the last 20 days.

Or perhaps they're smart enough not to so easily be taken in by propaganda - smart enough to know our government and military has not always told the truth about war, with no reason to believe anything has changed today. I've watched the media over the last few weeks, and I've seen more accurate reporting coming out of the military's own public affairs personnel (which have a mandate to portray the military solely in a positive manner).

> the Cold War last?

Very well said, Jim. It is amazing how many talk about how great America is, but so quickly seek to suspend what makes America great when it is inconvenient. A free and open society makes us stronger. In a oppressive society, people prudently tend to avoid the government and military as much as possible. That extends to scientists, engineers, technology specialists, backyard experimenters, and just plain old folks. Here, many complain instead of not having more involvement in government and the military. Everybody thinks they have a better way of doing things - and some certainly do (we have benefited from it many times). Oppression stifles innovation and free thinking. Once we head down that road, we lose the edge that has made this country great and powerful.

It is not so simple or extreme - pacifists versus war hawks. Those who oppose the war do so for many reasons. Those who support the war do so for as many reasons. Some will never change their support or opposition to war (the pacifists and war hawks). Most will change support or opposition based on the realities of the situation.

Dwight:

In this case, our cause is just. We seek to free an imprisoned nation from
the barbarism of a vicious, totalitarian despot who would have threatened
the rest of the free world unchecked had we not finally intervened. No, it
is categorically NOT possible for any loyal American to justify non-support
for this righteous campaign and the Commander-In-Chief who courageously
prosecuted it. To withhold support for the President and this war is to
choose the continuation of the evil of the Saddam Hussein regime. One
cannot say they support our Troops yet deny the President the support
he so richly deserves for having the courage to eliminate this plague from
the face of the earth. These Anti-War protesters are merely mindless
parrots of empty rhetoric which reflects nothing more than their own
intellectual laziness and physical cowardice.

Dwight:

PFC Lynch's new found fame has resulted in the offer of two complete
college scholarships. Then there will be the books, made-for-TV movie,
if not a full-blown Hollywood box-office feature, celebrity endorsements,
the list is endless. She is now a millionaire -- many times over. Her
name is known in every household in America and most of those in
the rest of the Western World. Of course, the men who rescued her
will continue to get their pay and benefits until they are either forced
to separate from the Army, or, if they're lucky, retire. And the rest
of the POW's and all those killed and injured will simply fade into the
background of America's memory, except for their own families and
friends. But Jessica will remember them -- and after all the glory soon
to be lavished on her fades, she will always know that the sacrifices
they made for her will live on in a place of highest honor. PFC Lynch
is a true, legitimate American Hero deserving of everything she receives.
It will also be her mission to make sure that the others are not forgotten.

This sounds promising. I suppose I should print out the Part 97 rules
and just read them. The ARRL operator's manual didn't mention these
options.

Understood. I also need to see if there's any geolocation beacons
nearby (I think there's some in the 915 MHz band). Does anyone
actually use the geolocation allocations? They seem to be sprinkled
all over, but I've never actually heard of a service that uses them.

:) I'm a paraglider pilot and this is exactly why I want the wind
data. I'm going to hook it into a homebrew ultrasonic anemometer, so
I'll be able to measure gusts very accurately. My main problem is
getting permission from the city to plant this thing off on
unincorporated land. So many regulations!

Thanks for the tips...

Dennis -

Thanks for the info. I wasn't aware of the hobbyist clauses in the type acceptance for Part 15. That makes it far more tempting. I especially like your advice to have it comply with both parts 97 and 15.

I'll be digging into the CFR 47-97, starting with 97.221, but my experience with other Parts is that often the meeting minutes are required in order to understand the intent of the regulations. Do you have any advice on where to go for pre-fabricated interpretations of the regs?

Sure. One can also go back and criticize his predecessors for not seeing the
consequences of allowing SH to have such a big army.....

>Of course, once you start damning people for not
>being clairvoyant the list of the damned gets a bit lengthy.

True, true. However, consider that while the race is not always to the swift,
it's that's a pretty good way to bet. A dictator who built his power base on
murderous repression probably isn't going to be overthrown easily.

If there's any real MMQBing to be done, it should be against UNSCOM for putting
up with the regime's shenanigans for too long. Suppose that the very first time
the inspectors were denied access to a site, they simply packed up their bags
and left. And as soon as they were gone, air satrikes flattenened the denied
site.

What do you think would happen with my thought experiment about a gasoline
surtax?

>It is amazing how many talk about how great America
>is, but so quickly seek to suspend what makes America great when it is
>inconvenient.

Not just incovenient, but sometimes downright ugly to look at.

> A free and open society makes us stronger.

Exactly!

>In a oppressive
>society, people prudently tend to avoid the government and military as much
>as possible.

Or they just up and leave.

>That extends to scientists, engineers, technology specialists,
>backyard experimenters, and just plain old folks. Here, many complain
>instead of not having more involvement in government and the military.
>Everybody thinks they have a better way of doing things - and some certainly
>do (we have benefited from it many times). Oppression stifles innovation and
>free thinking. Once we head down that road, we lose the edge that has made
>this country great and powerful.
>
'zactly. Which is why things like nonviolent anti-war protests are actually good for the USA in the long term, even if they don't stop the war in the short term. If nothing else, they are a real-life demonstration that free expression does exist in the USA.

>>
>
>Fer cryin' out loud, will someone shut him up??!!! (LOL) Jim!! Don't say
>stuff like that out loud!

BWAAHAAHAAA!

Let's see - suppose the war winds up costing $100 billion ($100,000,000,000)
this year. Suppose the average retail gasoline user buys 500 gallons of
gasoline under the new tax. And suppose there are 200 million (200,000,000)
average retail gasoline users. End result is $100 billion in new tax revenue.

Hmm..only $100 billion....doesn't leave anything for fighting terrorism or
reducing dependency on imported oil....better make it $2/gallon.
>

>> Most of all, suppose he said "the country needs this tax as part of the
>> war effort".
>>
>> How do you think people would react?
>
>Well, *IF* the poltiicians would even listen to their people (us), then I'd
>tell them, "Not only no, but Hell no."

But Kim! It's the President (hypothetically) saying what we (hypothetically)
NEED! Aren't you a loyal American? How can you or anyone question him? He has

all the information, and in his judgement this is a hypothetical sacrifice we need to make.

(sardonic mode = OFF)

>> Would anyone who spoke against this hypothetical new tax be giving aid and
>> comfort to the enemy?
>>
>Nope, but I'd dang sure be drumming the "go to war" drum...<sarcastic grin>
>
I think you mean "stop the war" drum, don't you?

I think you've got the general public's reaction down perfectly.

> And you base that statement on what?

The fact that the Administration has, from the day it entered office,
expressed disdain for those -- domestically and internationally -- who
disagree with it. It's one thing to disagree about things, it's another to
belittle and demean those with whom you disagree. Why is it that countries
that have been our close allies for many years are on the other side of
the fence from us now? In significant part, it's because we've told them
in so many words that we don't give a damn what anyone else thinks.

To be fair, UNSCOM serves at the pleasure of the UNSC. Except for reasons of safety of personnel, UNSCOM's people couldn't just pick up and leave without direction from the SC. But I agree with your basic point. The principal failures were between 1991 and 1998.

> What do you think of my gasoline surtax hypothesis?

I'm having trouble picturing the President actually agreeing to tax anything to pay for this war. But if he did, yes, I think those who spoke out against it would be labelled unpatriotic by the Limbaugh-O'Reillyites and their mindless followers.

>Tsk, tsk, tsk. I do have a radio license.

You have a radio OPERATOR license. You do not hold a station license.
Your GROL specifically PROHIBITS you from transmitting a radio signal without
the benefit of a station license.

In otherwords...You're QRT.

>Robeson cannot admit ignorance of the wider field of radio beyond
> amateur radio.

My knowledge of the "wider field" is already wider than what you've
demonstrated herein. This thread included.

>> Where did I say there were, Your Scumminess? There is still maritime
>>Morse Code traffic in the MF bands. There is still maritime Morse Code
>>traffic throughout HF. It's there. It's real. Get over it.
>
> The maritime morse code use is almost extinct now. A listen
> over the maritime bands on LF to HF here in Southern California
> turns up very few...but much voice and data.

Thank-you for acknowledging that I was correct, and that Morse Code IS
still used in the maritime services.

>Pilots do NOT use it...unless they are morse-fanatic amateurs.

Oh? You base this upon WHAT experience as an Aviator, Your Winglessness?

>Pilots do NOT HAVE TO USE IT. It's that simple.

I never said they HAD to use it, Your Flailingness. I said it's there and
CAN be used.

>If they know
> their position within about 200 NM, they simply pull out their
> sectionals, consult the VOR frequencies on the map, dial it up
> and they will have the VOR. A quick eyeball of the sectional
> will let them know approximately where they are...triangulation
> of at least one other station via the OBS and they will be quite
> close.

And if they don't audibly verify that the VOR they are tracking is the one
they want, they jsut screwed up...potentially fatally.

Again, you are asked to please provide your background and experience in
aeronautical navigation. So far you have shown you would be a negligent pilot.
Perhaps that's why you are not in teh FAA database?

>NO morse code identification is used with ATC Transponders....(SNIP)

Nice try to divest yourself of an awkward position of futile stupidity,
but you've already dug yourself in, Your Putziness. A transponder is NOT a
navigational device. Stay focused.

>Watch your sentence structure.

Watch your own, Your Lyingness.

>TACAN ground stations are NOT morse code
> IDed and, like DME, operate solely in low L-band

Again, your ignorance shows.

>Watch your English sentence structure or you will be admonished
> for not being able to use English as a native language.

Again, Your Lyingness, watch your own.

>Robeson displays such an abysmal lack of modern (in the last 48
> years) civil aircraft radionavigation that a mini-tutorial on basic
> radionav had to be given by myself.

So far, you've only been half right. Your lack of situational awareness on
current aeronautical navigation would get you busted on the check ride.

You are incompetent, Leonard H...Just accept it. I have.

>>I never said "pilots use morse to navigate by". I said pilot's use
>Morse
>>Code to identify the beacons that they DO navigate by.
>
> Very, very few do. Pilots DO NOT HAVE TO LISTEN FOR ID in

> air navigation.

"Unoffical rule"...?!?! "...taught in ground schools"...?!?!

BBWWHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHHAHAHAHAHAHAHAHA ! ! ! !

Riiiiiiiiiight!

>> WHERE in the FAA database is YOUR name? Mine's there. Mine's also in
>>the FCC database. I see you are absent from both.
>
> No aviation license is required to learn, experience, and know air
> radionavigation...not even for celestial navigation.

You're right...No license is required to learn. However PRACTICAL
EXPERIENCE is required to know the difference between theory and application.

You know neither!

>I've had several years of experience in the design of civil and
> military avionics, especially so in regards to aircraft radio-
> navigation systems, methods, techniques, and standards.

But no experience using them. You are incompetent to navigate an aircraft
by any means othr than a road map.

>Does the acronym ARINC mean anything to Robeson?

Does it to Anderson?

(A)nother
(R)ant
(I)ndicating
(N)o
(C)ompetence

>Mid-VHF propagation characteristics were known...(SNIP)

Yes Lennie. And that's why student pilots are taught, to this day, to
verify the VOR they are tracking.

>Robeson is invited to peruse any group of sectionals or en-
> route charts to show the slightest possibility of his alleged
> "skip errors."

Sectional charts can be used to predict propagational anomalies..?!?!

>TACAN was developed...(SNIP)

Irrelevent historical tidbit, but not germane. Obfuscation.

>DME (Distance Measuring Equipment) uses the same essentials...(SNIP)

Irrelevent historical tidbit, but STILL not germane. Obfuscation.

>VOR is really an elegant system for a simple airborne receiver
> based on vacuum tubes (it was developed in the early 1950s).

Yes, Lennie...we know...just one more 50's-era historical tidbit taht is
the backbone of your rants.

>Robeson can look at any group of sectionals or en-route charts
> and note the ground station frequencies of VORs. He can then
> (with all those alleged years of navigation experience) note the
> range separation...far enough that "skip" (rare at VHF) will not

> be a factor in any "errors."

And once again Lennie the Lame demonstrates HIS incompetence and lack of PRACTICAL EXPERIENCE with VHF propagation. Almost any issue of CQ or QST's "VHF" related columns will provide tons of historical events of VHF propagation events that conducted signals of very low power over distances never anticipated by the stations involved.

These events are fact. They happened. Too bad for Lennie.

>If Robeson finds some anamoly, his DUTY to country and "fellow
> pilots" should be to contact the FAA immediately and report that
> badness.

Why, Lennie? The errors are already known.

>>An error avoided by ID'ing the right VOR...A point
>>made to me by both my CFI and the Examiner I rode with. Neither were
>>Amateurs,
>>but made certain I knew to cross check the VOR ID by listening to it and
>>making sure I had the right beacon.
>
> You were obviously noted to be an LPN at the time, therefore
> you were brought up to speed on basic basics...if we can
> believe you. [few of us can]

I was an LPN in 1974? I don't think so.

>I have much more technical knowledge on civil air avionics than
> Robeson.

Inside the box? No doubt. How to USE the box? Never. You've already demonstrated significant lack of skill in the alst two posts. I'd let you tweak my NAVCOM's, Lennie, but I'd rap your knuckles with a ruler if you tried to play with them in the air.

>The very first VOR receivers were manually-tuned. This gave way...(SNIP)

More historical tidbits to cover his error about present day VOR receivers being crystal controlled. "OBFUSCATION"

>FAA has many VORs arranged so that a local tower or TRACON
> can use the "mid-band" audio...(SNIP)

We've already discussed that, Lennie. I see you've been reading the FAA's Pilot handbook to bring you up to speed. Still no practical experience, however, and STILL not in the FAA database as a licensed Aviator....Not do I see you as an authorized repairman.

More of what you are NOT, and less of what you are, I see.

>I've not used TACAN in a civil aviation craft, only the VOR, DME,
> Localizer, Glideslope, Marker Beacon, and ATC Transponder.
> I've used TACAN on military aircraft along with the expanded
> (Mode 4) Transponder fully set for the IFF code of the day.

Oh..?!?! In what capacity did YOU use the NAVAIDS of an aircraft in
flight, Lennie?

>Get some mental help, Robeson. You need it badly

I am not the one who think's he's Sky King, Lennie. Nice try, but you are
still lacking in yet another field of expertise for which you have no PRACTICAL
EXPERIENCE. That lack is glaring.

>You are outclassed and outgunned on technical knowledge of
> the civil aircraft radionavigation systems you brag about as an
> alleged "expert" on them. Sad case.

As I said...Inside the box? Perhaps. USING the box? Never. You'd never
pass the PPASEL checkride, Lennie.

And I STILL don't see your name in the FAA database.

Steve

This isn't too surprising, Bill. NTIA already requires such as a result
of band sharing and increasingly narrow bandwidths for audio channels. Civil
Air Patrol has lost the use of dozens of otherwise frequency-stable/compliant
Amateur transceivers for it's use becasue the RECEIVERS were not IMD compliant.

The ironic part is that Islam is the only one of the Big Three
(Christianity, Judism and Islam) that actually teaches acceptance of the other
two as fraternal brothers.

I wish I spoke Arabic and understood the culture better to understand how
they warp it to be just the opposite.

Of course Christianity has/had Jerry Falwell, Jim Jones, Jim Bakker, the
Crusades, etc...and I can find nothing in the Bible that preaches the kind of
INtolerance that Christianity has spawned.

Maybe that's why I have about a zilch-point-squat tolerance for ANY organized "religion".

Hi Dennis -

I spent last night surveying Part97, and I have a followup question regarding the relative merits of an "auxiliary station" (AS, cfr47:97.201) vs. an "automatically controlled digital station" (ACDS, cfr47:97.221).

According to 97.201(b,d,e), an AS can be put into service on 1.25 meters and shorter wavelengths, with automatic control and one-way transmissions. However, this mode excludes the 2m band.

In 97.221(b,c-2) we learn that 6 meters or shorter is OK for an ACDS. But paragraph 97.221(a) specifically excludes AS from this category.

Furthermore, I see two possible interpretations due to the use of the word "other" in 97.221(c): "A station may be automatically controlled while transmitting a RTTY or data emission on any other frequency authorized for...".

Interpretation one: Does this imply operation as a two-carrier system with one for command and control and the other for traffic?

Interpretation two: Or is this sub-rule intended to extend the range of an ACDS to wavelengths above 6 meters but not specifically listed in 97.221(b)?

Seems like Interpretation #2's extension of the service to the really low frequencies fits the technical specifications of very low bandwidth and autoresponse found in 97.221(c). This would tend to improve the efficiency of utilization of the more-valueable spectrum down there.

Other than that, the only difference between an AS and an ACDS that I can see is the bands of operation (<=1.25m vs <=6m) and the explicit permission for one-way transmit (97.201(e)) from an AS (but not for an ACDS).

Does anyone have a good read on which interpretation applies to the ACDS rule?

Any other advice on which one (i.e. which of the AS or ACDS rules) is more appropriate for a low-data-rate weather station feed?

Thanks again,

- Bill KG6PNN

Just answer the questions, Len. They're not a trap. Just simple,
direct questions about FCC rules and the database.

> >> Fund a personal DSL line or send me a CD-ROM with the full FCC
> >> amateur radio database on it and I might write a search program
> >> and totalization for any field of data...then present the totals in here
> >> free of charge.

Nor will you admit to errors that *are* errors, if the person pointing
out the errors disagrees with you.
>
> Why do you pre-bias questions in favor of morse code?

Where do you see any bias in these questions:

Currently there are more than 250,000 US amateur radio licensees shown
in
the database as "Technician". Have any of them passed code tests? Do
any of
them have HF amateur privileges?

Where's the alleged 'bias'? Explain how those questions are biased.
>
> Are you the ARRL?

Yep - about 1/175,000 of the ARRL.

> Just honor the request I made and I might answer your question.

Hmm - previously you wrote:

"Fulfill my request and I will give you the answer."

"Will" just became "might".
>

> licenses kept the total US ARS license numbers from shrinking.

There is no "NO-CODE Technician class" of license in the USA. No US
ham license specifies that code cannot be used by any ham. The FCC
does not issue amateur radio licenses that say "NO-CODE".

You ASSUME that if the code test for the Technician had not been
dropped in early 1991, none of the hams who got Technician class
licenses after the change would have been licensed. Very poor
reasoning. Illogical.

The FACT is that the total growth in US amateur licenses after the
1991 change but before the 2000 restructuring was only slightly more
than the growth in an equal time period previous to the change.

>Interpretation two: Or is this sub-rule intended to extend the range
>of an ACDS to wavelengths above 6 meters but not specifically listed
>in 97.221(b)?

I think this is correct. You can put an autoresponder on any
HF frequency, but an automatic station which initiates its own
transmissions needs to keep to the narrow HF bands listed in (b).
VHF and above is always okay.

>Any other advice on which one (i.e. which of the AS or ACDS rules) is
>more appropriate for a low-data-rate weather station feed?

I think the differences between an auxilliary station and an automatically
controlled digital station are these:

- An AS can use any mode, including a voice mode, while an ACDS is limited
to digital modes. Since your application seems to need a digital mode
in any case this distinction doesn't matter to you.

- An AS is specifically allowed to make one-way transmissions of anything,
while an ACDS is limited to one-way transmissions only for the generally
permissible purposes listed in 97.111. Since your goal is to transmit
"telemetry", 97.111 allows this type of one-way transmission and this
distinction doesn't matter to you either.

An ACDS is hence more limited in function than an AS, but has a broader
range of permissible frequencies available. Since your application
seems to meet the limitations of an ACDS you are free to call the
station that if you want to use frequencies where an AS is not permitted.
If you use a frequency where an AS is permitted, however, it doesn't
matter what you call it.

I see you offered nothing to contradict my statement. BP knows that the appropriate place for his "Newsline" post is "rec.radio.info" because that group is a limited-post-access group just for information bulletins that he received permission to post there back in 1996. He also knows that it's not appropriate here, but does it anyway. The charter for "rec.radio.amateur.misc" will permit it to be crossposted there.

> >Only when he does things correctly will it be worth anyone's time to listen.

> >the National Enquirer as compared against the New York Times.
>
> Uh...yeeeeah...Right.

Fine: You need an example:

About two years ago (and for some time before), BP reported on an incident in the Southern California area regarding a repeater operated on 145.460- MHz and alleged interference with a repeater on the same frequency near Tijuana, BC, Mexico. What he didn't say is:

1) The mexicans were intentionally interfering with the machine in Los Angeles that was causing them problems by placing a signal on the INPUT frequency and using a 1,200 watt amplifier and yagi antenna. So they could get into their own machine, the mexicans used an auxillary input, which was repeated via the transmitter on the input frequency just described as well as the repeater's output frequency. That constitutes "malicious interference" but there was no mention of their actions. BP described the mexicans as the "good guys" when they were not.

2) He further reported that there had been no attempt to coordinate the repeater in Los Angeles. As it turns out, an UNACTED request for coordination

application had been delivered to the appropriate repeater coordination body (TASMA) a few years before. TASMA lied to the FCC when Riley Hollingsworth asked if an application had been filed (in addition to his question of whether or not coordination had been granted). Mysteriously, the application was eventually returned to Scott Swanson, K6PYP (the trustee of the Los Angeles machine) FIVE years later with no action taken. Where was this mentioned in the story reported by BP? [It wasn't.]

3) Don't you have to wonder why BP never asked K6PYP, or Angos Winke, KC6OKA, the alternate control operator, for their side of this story despite the fact that both lived in Los Angeles, yet he did talk to the mexicans and get their side of the story? The reason is simple: He's not even a responsible amateur journalist. Because of this, he left out of his story the harrassment that these two individuals, plus others who talked on the Los Angeles machine, received courtesy of the mexicans, including jamming on other repeaters, phone calls (for those with listed numbers), etc., ...

Then, there's also the matter that "Newsline" claims that it costs $1,000.00 per month in expenses to collect and report the news. Considering that its rival, "This Week in Amateur Radio" does the exact same function for only $100/month, then just what is this additional $900/month going to? Out of that amount, only about $50/month is explainable by "Newsline" maintaining their "instant update telephone number." Where's the rest going? There's only one possibility: Mr. Pasternak is paying himself a SALARY for collecting the amateur radio news. Although not using amateur radio itself to collect the news (I'll give him the benefit of the doubt on this), his pecuniary interest is still a violation of 47 CFR 97.113(a) and/or (b) - indirect compensation, which with the wording in (a), could also mean that any system repeating his news bulletin could also be in violation (because it facilitates the commercial affairs of BP since he takes a salary). This is different from the situation around "TWIAR," where Community Video Associates, Inc., the entity which produces "TWIAR," has non-profit status under 26 USC 501(c)(3) [and under the laws of the State of New York.] "Newsline's" producers have no such status, because if they did, they would have to disclose this fact of paying BP a salary (per the non-profit public inspection statute - 26 USC 6104), because it would appear on their IRS Form 990 or 990PF.

You asked.

Used to have a station license, but not in amateur radio.
Partnership with others. PLMRS.

Hmmm...I've had that commercial license for 47 years. :-)

>Your GROL specifically PROHIBITS you from transmitting a radio signal without
>the benefit of a station license.

Better look over Part 1 again...

> In otherwords...You're QRT.

Hardly. :-) Look at Part 95, Part 15, Title 47 CFR, just for
starters.

>>Robeson cannot admit ignorance of the wider field of radio beyond
>> amateur radio.
>
> My knowledge of the "wider field" is already wider than what you've
>demonstrated herein. This thread included.

Tsk, tsk, tsk. :-)

The LPN doesn't know military communications despite an
alleged "career" in the military.

The LPN doesn't know civil aeronautical radio or radionavigation.

The LPN doesn't know mass media radio services (used to be
called "broadcasting").

The LPN doesn't know Private Land Mobile Radio Service (PLMRS).

The LPN has never participated directly in radio or electronics
engineering. A half year as a purchasing agent is hardly IN
electronics.

>> The maritime morse code use is almost extinct now. A listen
>> over the maritime bands on LF to HF here in Southern California
>> turns up very few...but much voice and data.
>
> Thank-you for acknowledging that I was correct, and that Morse Code IS
>still used in the maritime services.

Tsk, tsk, tsk...that's like saying stage coaches are still USED for
transportation despite their only use now is in the entertainment
industry for movies and TV or as amusements at state fairs. :-)

The very best, safest stage coaches ever was are built today
with centers in Arizona and Southern California.

>>Pilots do NOT use it...unless they are morse-fanatic amateurs.
>
> Oh? You base this upon WHAT experience as an Aviator, Your
>Winglessness?

Based on knowledge of FAA regulations and direct experience with
ATC and radionavigation electronics, including design.

>>Pilots do NOT HAVE TO USE IT. It's that simple.
>
> I never said they HAD to use it, Your Flailingness. I said it's there
>and CAN be used.

Oh wow, the slightest little hint of the possibility of morse code use
for any reason and the LPN goes berserk on the subject. :-)

Get mental help, boy. You need it.

> And if they don't audibly verify that the VOR they are tracking is the
>one they want, they jsut screwed up...potentially fatally.

Bullshit. If a general aviation pilot doesn't know where he/she is
in a 200 NM radius, they are GENERALLY screwed up and
should never have been there above the ground and posing a
general threat to anyone below.

I have NO idea of where you've been in the last 40 years in aviation
but I do NOT want to be on the ground under your flight path. You
seem to "know" only the dire warnings of your instructors and some
by-the-book ops rules of the CAP. You DO mouth-off incessantly
about your prowess in the air and use of CW on navaids, yet
haven't been written up in NOTAMS or Flying magazine. :-)

> Again, you are asked to please provide your background and experience in
>aeronautical navigation. So far you have shown you would be a negligent
>pilot.

Oh, more bullshit. I passed my private pilot written 40 years ago
(want a scan of the punch card reply? as if you care?) and
stopped that only for LACK OF MONEY AT THE TIME. My late
first wife wanted a house to live in, not an airplane.

There were no taxpayers writing off flying lessons for other tax-
payers 40 years ago. Dual time (that's with an instructor) was
$17 an hour, solo time was $12 an hour 40 years ago.

> Perhaps that's why you are not in teh FAA database?

Not now. I doubt their records go back 40 years.

>>NO morse code identification is used with ATC Transponders....(SNIP)
>
> Nice try to divest yourself of an awkward position of futile stupidity,
>but you've already dug yourself in, Your Putziness. A transponder is NOT a
>navigational device. Stay focused.

"Not?" Care to argue with the FAA and the Air Traffic Control people
on that? You would lose big time.

>>Watch your sentence structure.
>
> Watch your own, Your Lyingness.

I do. Now you keep on watching your bad sentence structure
and the rage-induced typos you are still making..."that is
something up with which I will not put." (W. Churchill? quote)

>>TACAN ground stations are NOT morse code
>> IDed and, like DME, operate solely in low L-band
>
> Again, your ignorance shows.

TACAN ground stations still don't do morse IDs.

TACAN operates in the same low L-band as DME.

> So far, you've only been half right. Your lack of situational awareness
>on current aeronautical navigation would get you busted on the check ride.

This isn't a flying newsgroup, dumas.

No "check rides" are "required" to explain principles of civil aviation
radionavigation to the ignorant.

> Again, your ignorance and incompetence would get you busted on the
>Private Pilot check ride.

Is that required in US amateur radio? :-)

> You're right...No license is required to learn. However PRACTICAL
>EXPERIENCE is required to know the difference between theory and application.
>
> You know neither!

Just another insult claim. Sigh.

>> I've had several years of experience in the design of civil and
>> military avionics, especially so in regards to aircraft radio-
>> navigation systems, methods, techniques, and standards.

>
> But no experience using them. You are incompetent to navigate an
>aircraft by any means othr than a road map.

I've used sectional charts from the US Government Printing Office
for air navigation. Cheaper than Jeppesson charts and "Jeps"
originated with US government charts. :-)

I did use an en-route chart once on a trip to McCarran Field in NV.

Didn't go backseat in a T-6, though. :-)

>>Does the acronym ARINC mean anything to Robeson?
>
> Does it to Anderson?

Aeronautical Radio INCorporated. An industry group that set
the aviation electronics standards for radio communication and
radionavigation and the electrical-electronic interfaces for same
since the early 1950s until today. FAA adopted nearly all of the
AIRINC standards for civil aviation electronics and the FCC
adopted the frequency arrangement for VOR/LOC-DME-GS so
that a single frequency control can select all of them.

Aeronautical Radio was a private communications service before
WW2 and became the nucleus of the US Air Traffic Control
System during that war. After the war they split off the
communications portion (it was decreasing in need) and the
aviation industry standards group known as ARINC of today
(and 50 years ago) was formed.

The various ICAO member nation civil aviation regulatory
agencies have adopted the ARINC specifications and mention
them by name and number just as the FAA does.

> Yes Lennie. And that's why student pilots are taught, to this day, to
>verify the VOR they are tracking.

No doubt in Robeson's impovrished part of the USA. :-)

>>VOR is really an elegant system for a simple airborne receiver
>> based on vacuum tubes (it was developed in the early 1950s).
>
> Yes, Lennie...we know...just one more 50's-era historical tidbit taht is
>the backbone of your rants.

Tsk, tsk, tsk...Those "tidbit tahts" (practical experience in design
and use) extend into the 80s. :-)

Pity you've not seen the excellent RCA Corporation (Aviation
Systems Division) complete commnav package in a single
3 1/2" instrument case only 10" long. Contains a VOR, the
VOR OBS, Localizer, Glideslope, LOC and GS indicators,
Marker Beacon receiver and MB indicator...plus a full comm

transceiver and frequency controls. All solid state, only a few ICs. Designed and built in Santa Monica, CA, beginning in 1973. I didn't do any of that commercial design but did adapt it for military use with military specifications at Electromagnetic and Aviation Systems Division.

Do you want to get into L-band transponders and Teledyne Electronics (Newbury Park, CA) in the early 1980s? :-)
Do you know what "KIRs" and "KITs" are? "Mode 4?"

Does CAP piloting excellence require the extension of one finger to push a single button on a transponder to "Squawk Ident?" Wow, must be a LOT of ground school and "check rides" for that one-pinky exercise! :-)

>>Robeson can look at any group of sectionals or en-route charts
>> and note the ground station frequencies of VORs. He can then
>> (with all those alleged years of navigation experience) note the

You don't have a "need to know." :-)

>>Get some mental help, Robeson. You need it badly
>
> I am not the one who think's he's Sky King, Lennie.

Yes you are. All you are capable of in here is to insult, demean,
and try to humiliate anyone who opposes you. That's a form of
sociopathy. You don't "play well with others," can't take the
slightest correction without going berserk in here and generally
act like a grade-A asshole with oak leaf clusters.

You DO need mental help. QED.

> And I STILL don't see your name in the FAA database.

True enough. Now, what has that to do with US amateur radio
or morse code testing?

>field, you have to come hat-in-hand like Oliver Twist, to someone like
>me for a simple download? "Please, sir, I need some data.."

Oliver, don't twist the subject.

I meant that we (my wife and I) don't have a DSL at our residence.

You seem to be a little dickens.

>Answer the questions I asked and I might supply your request.

You don't "ask questions," you demand answers. :-)

>> >Here's a hint: Start the download just before bedtime and let it run
>> >while you sleep.
>>
>> Here's a hint: Supply my request and you might get an answer.
>
>Why should I do what you ask?

You don't have to. You can remain in the Gang of Four and
act argumentative, aggressive, and antagonistic about

morse code and its alleged virtues. You have been consistent
in here in that regard.

>> >> DSL service makes it reasonable.
>> >
>> >So sign up. Do you want a welfare handout from me?
>>
>> Don't need it.
>
>Then don't ask me. Do your own work.

Quit asking questions, then. You don't have authority to demand
answers. :-)

>> >The charade is that you won't answer them. Why not? Afraid of the

>>
>> Not at all.
>
>Then why not answer them?

You ARE a little dickens. You have too many Great
Expectations. :-)

>> You won't accept the truth on morse code. You are
>> afraid.
>
>Not me.

Tsk, tsk, tsk...bravado. :-)

>There is no "NO-CODE Technician class" of license in the USA. No US
>ham license specifies that code cannot be used by any ham. The FCC
>does not issue amateur radio licenses that say "NO-CODE".

Tsk, tsk, tsk...read the regulations again. :-)

You, like all the members of the Gang of Four, are Title happy.

You want to make the Title of the license grant certificate as the
prime definition. It isn't.

The amateur radio license is for BOTH operator and "station"
(regulations define that as "control point").

Amateur radio licensees are directly responsible for the
technical regulations of their station, the same as operating
regulations.

>You ASSUME that if the code test for the Technician had not been
>dropped in early 1991, none of the hams who got Technician class
>licenses after the change would have been licensed. Very poor
>reasoning. Illogical.

Tsk, tsk, tsk...there's that pro-code bias again, Jimmie. :-)

Ooooo..."very poor reasoning. illogical." :-)

>The FACT is that the total growth in US amateur licenses after the
>1991 change but before the 2000 restructuring was only slightly more
>than the growth in an equal time period previous to the change.

Tsk, tsk, tsk...we've been around and around on that for
years and you still want to practice denial about morse code.

You aren't strictly dishonorable. You are so wrapped up in
the morse mystique that you can't think straight on that
subject.

>> I've lost interest in this farcical "debate" over morse code.
>>
>> Mr. N2EY is a PCTA and a member of the Gang of Four.
>
>Ah, the old ad-hominem attack when you run out of arguments. Which
>happens frequently here.

Tsk, tsk, tsk...forgetting the charges you laid about "very poor
reasoning?" "Illogical?" :-)

Whatever is remarked less-than-positive about morse code,
Jimmie will consistently charge "error," "faulty," "mistaken,"
"very poor reasoning," or "illogical." :-)

If there is such a thing, Jimmie seems to be acting as a "morse
code fedayin," a death commando in the fight for morse code
testing, use, and nobility. He keeps making those suicide
runs and hasn't realized his ideology died some time ago. :-)

>There is, however, one thing you never seem to run out of, Len.

I came close to running out of gas the other day until I found
a Shell station with working pumps. Had a discount coupon
valid at six local Shell stations. No problem. Found a nearby
Shell station with working pumps. Local anamoly.

I DO run out of patience with some of you morsemen on the
code test retention forever-and-ever. You guys keep living in
the past too much...and can't get a working time machine...
so you try to keep the future looking just like the past.

>> nasty action.
>
> It is not so simple or extreme - pacifists versus war hawks.

I was only remarking on PACIFISTS, Dwight. I wasn't
"comparing" one extremist group with another.

Do-nothing pacifism avoids responsibility. That applies to
those who "didn't see anything" in regards to any sort of
danger that lies ahead.

Isolationism is a form of pacifism...retreating behind
supposedly isolating borders...national borders to decisions
made by others that are perceived to be impassable.

Isolationism was popular in the USA in 1940. Nobody could
possibly invade the USA back then, could they? It was
emotionally wonderful to aid others in far-off lands in that
beginning of WW2. But, why should the USA go to any war
on distant shores? The USA wasn't threatened directly, was
it? Well, not until late 1941...

Isolationism was still around in mid-summer of 1950. A small
half of a country in Asia invaded the other half. The USA wasn't
directly attacked, was it? The USA was safe, wasn't it? It was
someone else's problem, wasn't it?

Isolationism and pacifism grew about a decade later to heroic
proportions about another country (or two halves of a country)
in southeast Asia (as opposed to northeast Asia). It wasn't a
concern of the USA in such a faraway place, was it? The USA
was safe and isolated in North America...it shouldn't bother
with other people's problems. Don't get involved was the cry.

Of course by that time a very large union of socialized republics
had nuclear capability and a delivery system for same and DID
threaten the USA and a number of other free "western" countries.
That particular republic DID take over a number of countries
through their particular ideology.

The USA has gotten rather involved in a number of other, later countries that didn't have IRBMs or ICBMs pointed directly at us. Panama was one (the USA built their famous canal). Grenada was another. Haiti is a good example where the USA should have stayed home, right? Haiti wasn't a military threat place, had no real strategic value nor oil, wasn't even settled by English-speaking colonists. The USA shouldn't have gotten involved according to the pacifist-isolationists.

In 1990 a large dictatorial-government Middle Eastern nation invaded a small neighbor. That nation's goal was rather transparent: Expansion by conquest. Kuwait was far from USA shores. Neither Kuwaitis nor Iraqis spoke English and their religions weren't based on Christianity. It wasn't any of the USA's concern was the cry of the pacifist-isolationists. The USA should not have gotten involved, should it? Iraq didn't directly threaten the USA, did it?

Meanwhile, the USSR had begun military support for the communist government in a place called Afghanistan in 1979. The USSR spent nine years there and didn't achieve any success. There were reports of as many as 15,000 Soviet military dead from that fighting. The USA wasn't directly involved in Afghanistan when the USSR was fighting there. The USSR pulled out in 1988. The USSR collapsed of its own accord (and economic-social failure) in 1991 and became separate republics. Pacifist-isolationists often point to the Soviet involvement in Afghanistan as the "cause" and that their military should have stayed home. The real reasons had begun long before the communist coup of Aghanistan. The original coup there had been orchestrated by communists playing their socialist ideology.

So, on up to 2001 the USA was very safe and secure in North America, no one had invaded our shores, no ICBMs fell on US targets, no weapons of mass destruction had devastated any part of the USA. Sure, there was a bombing of the parking area at the World Trade Center in the 90s but that was by a small bunch of Islamic crazies, wasn't it? Nothing to be concerned about. Let's all stay home, feel secure behind our borders, nobody will bother us said the pacifist-isolationists.

Problem is, we were NOT safe. That was proven on the 11th day of September in 2001. An organized Islamic fundamentalist group of terrorists had already invaded us and turned our own peaceful civilian carrier aircraft into flying bombs which slaughtered over a thousand civilians alone in New York City. Those terrorists were traced to Afghanistan as their base of operations.

Accordingly, the USA military went into Afghanistan and cleaned house, deposing the communist infrastructure and restoring their government into something representative of the Afghanis. The USA was successful where the USSR had not been successful. Afghanistan was not claimed as any conquest of the USA.

Haiti has not been claimed as any conquest of the USA. Grenada hasn't been claimed as a conquest of the USA. Panama hasn't been claimed as a conquest of the USA. Kuwait hasn't been claimed as a conquest of the USA. The USA hasn't claimed any of the countries it fought in over the last century as conquests. The USA gave the Philippines back its independence in 1946.

You and other forty- to fifty-somethings can point to Vietnam as some kind of "failure" from "getting involved." Vietnam finally became an independent nation in 1976 under communist rule. But, South Korea remains free and prosperous even though the Korean War hasn't yet ended while North Korea is essentially impovrished under dictatorial-military rule. Korea remains a danger point. According to the pacifist-isolationists, we shouldn't be involved there, it is no business of ours, it is far away and won't bother us. We still have large ports and buildings and relatively free access, don't we? Do we need another WTC-like event, such as a low-yield nuclear weapon going off on our shores? A spread of virulent disease among our population?

Iraq never directly threatened the USA in 2003 or 2002 or 2001. No Iraqi military action disturbed our isolated North American or Pacific states. Nobody would dare strike the USA, would they? Pacifist-isolationists are supremely involved in denial.

Judging by some of the past comments in here, you must have
been "bad" (probably unpatriotic) for not publishing your
written permission to operate from "T5 land" on ham bands.

"Patriotism" in regards to amateur radio seems to be an
infinite variable judged solely on morsemanship... :-)

>> >I think that the first issue here is that we should stop that
>spammer...(SNIP)
>>
>> Here we go again.
>
>I see you offered nothing to contradict my statement.

What's to offer, DS? You think Bill is a spammer. I don't. His items ARE relative to Amateur Radio specifically, and policy more often than not. When one condisers that MOST of the "posts" here are personality conflicts and mindless rants of unlicensed or inexperienced persons, Bill's posts are, at worst, a wholly germane diversion.

>1) The mexicans were intentionally interfering with the machine in Los
>Angeles...(SNIP)

So...You cite ONE incident that was over two years ago. There's usually at least five or six "items" per report, so assuming one release a week and (104 posts), that comes out to 520 seperate topics.

I'm am so not impressed. CNN should be so right all the time.

>2) He further reported that there had been no attempt to coordinate the
>repeater in Los Angeles.

I am futher unimpressed with the coordinating and political processes in Southern California. I am reminded of a situation involving a Costa Mesa Amateur who decided to set up his own "remote base" on busy 2M simplex frequencies and began operating an uncooridinated, out-of-band repeater. These were the days before Riley, mind you.

Despite being handed over 100 seperate signatures on formal written complaints, nothing was ever done beccause when the offender was contacted, "he swore and threatened" the "officials" of the coordinating organizations.

>) Don't you have to wonder why BP never asked K6PYP, or Angos Winke, KC6OKA,
>the alternate control operator, for their side of this story despite the fact
>that both lived in Los Angeles, yet he did talk to the mexicans and get their
>side of the story?

Mexicans are under no obligation to observe United States regulations. I was IN California and know for a fact that there were numerous occassions when

US Amateurs turned a blind eye to requests from Mexican Amateurs to help avoid problems THEY were experiencing.

I can't condone "tit-for-tat" harmful interference, but I understand where the motivation comes from.

>Then, there's also the matter that "Newsline" claims that it costs $1,000.00
>per month in expenses to collect and report the news. Considering that its
>rival, "This Week in Amateur Radio" does the exact same function for only
>$100/month, then just what is this additional $900/month going to?

Who cares?

W5YI and WB6NOA have been wringing money out of Amateurs for decades for performing what the FCC will do for free yet people still send them money every month. At least with Newsline, Mr Pasternak still makes his wares available to ALL Amateurs regardless of whether they "donate" or not.

>Mr. Pasternak is paying himself a SALARY for collecting the
>amateur radio news.

So...Some people may call him a charlatan, others an entreprenuer. This is NOT snake oil he's peddling. You are free to read/listen to the stuff or not. Again, you can QSY if you hear it on the air and put him in your killfile on-line.

>Although not using amateur radio itself to collect the
>news (I'll give him the benefit of the doubt on this), his pecuniary interest
>is still a violation of 47 CFR 97.113(a) and/or (b) - indirect compensation,
>which with the wording in (a), could also mean that any system repeating his
>news bulletin could also be in violation (because it facilitates the
>commercial
>affairs of BP since he takes a salary).

Well then, the next time you hear one ON THE AIR, write a letter to Riley. Otherwise, anything that transpires on this forum is NOT subject to any interpretation of Part 97.

>You asked.

Yep. But you've not given me one bit of reason other than your dislike for the man as to why his "Newsline" posts should or shouldn't appear here, DS. Again, in MY opinion (with absolutely no more or no less weight than yours, of course...) his posts are far more appropriate for this forum than MOST of the ones generated by "the regulars", and yes, that includes mine.

It's not gasoline that you never seem to run out of.

Better read the back of your permit again, Lennie.

Oh wow! CB radio! I am sooooooooooo impressed!

>I have NO idea of where you've been in the last 40 years in aviation...(SNIP)

Well, for almost 30 years of it I have been a licensed Aviator. With
HUNDREDS of hours as pilot-in-command and crosscountry experience.

And YOU have how many hours of flight time..?!?!

>Oh, more bullshit. I passed my private pilot written 40 years ago...(SNIP)

FORTY YEARS AGO...?!?!

BBWWWHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHA ! ! ! ! !

> (want a scan of the punch card reply? as if you care?)

What? Yet another chance for you to claim a "mistake" and send yet
another picture of someone exposing themselves? No thanks.

>and
> stopped that only for LACK OF MONEY AT THE TIME. My late

And since Mrs Lennie the First has since passed away and you are now so
richly esconed in your retirement, what has prevented you finishing up?
Certainly, someone as financially secure as you claim to be can pony-up the $3
to 4K it takes to successfully complete the Private Pilot tasks and get a
license, Lennie!

Other than my hang glider, I don't own an aircraft either, but I still manage to get to fly on a regular basis.

Of course, YOU are King of Excuses when it comes to not finishing what you start, aren't you? You can't even pony up the $10 and the hour of time it would take to get an Amateur license.

And that's about what it was when I got my license in 74. I started two years earlier, doing the usual "kid jobs", etc, to earn money to fly with.

So....Now that you are sooooooooo financially secure and have soooooo much knowledge, WHAT is your excuse for not pursuning THIS license...?!?!

>Not now. I doubt their records go back 40 years.

Oh...yes...A student pilot "license" which is part and parcel of the Third Class medical. THAT will impress them in the pilot's lounge!
